

The boundaries of the regular blocks are 4,800 international meters on a side and contain 2,304 hectares. The regular boundaries are defined in terms of X and Y coordinates of the Universal Transverse Mercator Grid System based on the Geodetic Reference System (GRS) 1980 Ellipsoid.

Onshore planimetric base compilation is from the high resolution National Hydrography Dataset files, downloaded from <http://nhdftp.usgs.gov/SubRegions/>.

Areas and dimensions of the irregular blocks along the zone boundary are as indicated.

Supplemental Official OCS Block Diagrams have not been published for blocks adjoining the approximate (short dashed) Submerged Lands Act Boundary and the Limit of "Big Zone". Coordinates and areal measurements for these blocks are not considered by the MMS to reflect an official Federal position.

National Wildlife Refuge boundaries were obtained from <http://alaska.fws.gov/aba/fm/CIS/refuge.htm>.

Subdivision of Blocks on the Outer Continental Shelf

Typical method of subdivision of the regular blocks, each subdivision being an integral part of the total, based on midpoint subdivision throughout.

Copies of these diagrams and other information may be obtained at the appropriate MMS OCS Region or from <http://www.mms.gov/d/maps.htm>.
