41	SE	1	Subsistence Mapping of Wainwright, Point Lay, and Point Hope
43	FE	2	Physical and Chemical Analyses of Crude and Refined Oils: Laboratory and Mesoscale Oil Weathering
45	MM	3	Data Interface Tools to Support Environmental Analyses: Interpretation of Existing Marine Mammal Data
47	HE	4	Genomics of Arctic Cod: A Sentinel Species in a Changing Environment
49	PO	5	Cook Inlet Circulation Model Calculations
51	PO/HE	6	Ecological Processes in Lower Cook Inlet and Kachemak Bay: A Partnership in Monitoring
53	HE	7	Benthic Invertebrate Habitats in Cook Inlet
55	MM	8	Polar Bear Habitat Use, Ecology, and Population Status in the Chukchi Sea
57	PO/SE	9	Integrated Seabed Surveys in the Arctic Ocean: Bathymetry, Archaeological Resources, and Ice Gouge Magnitude and Recurrence Rates
61	MM	10	Baleen Whale Distribution, Abundance, and Ecology in Cook Inlet and Shelikof Strait

AQ = Air Quality

IM = Information Management

PO = Physical Oceanography

FE = Fates & Effects

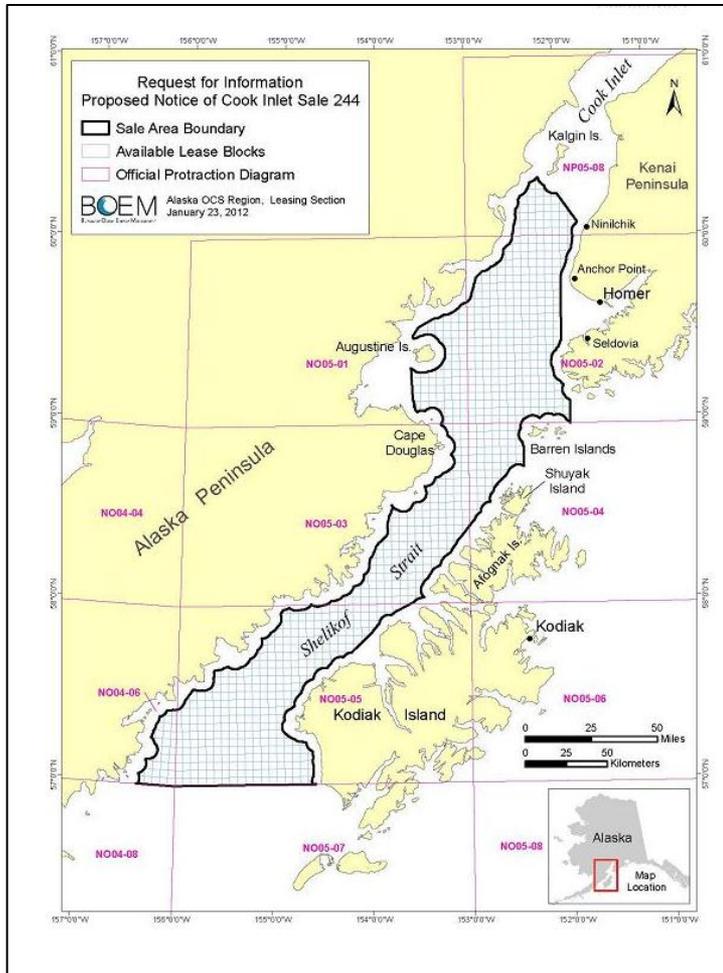

MM = Marine Mammals & Protected Species

SE = Social & Economic Sciences

HE = Habitat & Ecology

BOEM Information Need:

Alaska OCS Region

- This proposed study will aid in:
- Designing temporal, spatial and/or area deferral mitigation for oil & gas activities associated with Proposed 2016 Lease Sale for Cook Inlet
 - Monitoring effects of activities
 - Estimating incidental take from activities (MMPA & ESA)
 - Applying best available science to adaptively manage potential impacts of oil and gas on whales to reduce them to the lowest practicable level

Tentative Ranking: 10

BOEM Information Need:

- NEPA analyses, Chukchi and Beaufort Sea in 2016, 2017
- Endangered Species Act
- Marine Mammal Protection Act

- Year round baseline needed,

Date information Required:

- 2016 Cook Inlet Lease Sale, EIS analyses starting 2013

Background:

Relationship with Previous Work/Efforts

- Study was recommended from previous Cook Inlet Lease Sale information need analyses but not funded
- Builds on 2001-2006 temporally & spatially limited studies by others

Background:

Relationship with Concurrent/Future Efforts

- Integration with other BOEM Cook Inlet Studies for NEPA analyses including:
 - Circulation Model Study
 - Monitoring Ecological Process in Lower Cook Inlet & Kachemak Bay (as applicable)
 - Characterization of Benthic Invertebrate Habitats in Cook Inlet

Study's Objectives:

- Document minimum abundance, and identify spatial, temporal, & functional use patterns in proposed Cook Inlet/Shelikof Strait Lease Sale Area, & adjacent “downstream” areas by individuals & populations of baleen whales (humpback, fin, North Pacific right, blue, sei, (EAS listed) and gray, minke (not currently listed))
- Investigate relationships between whale occurrence, distribution of prey & oceanographic conditions
- Assess potential overlap of important whale habitat with the planning area & OCS development ship traffic

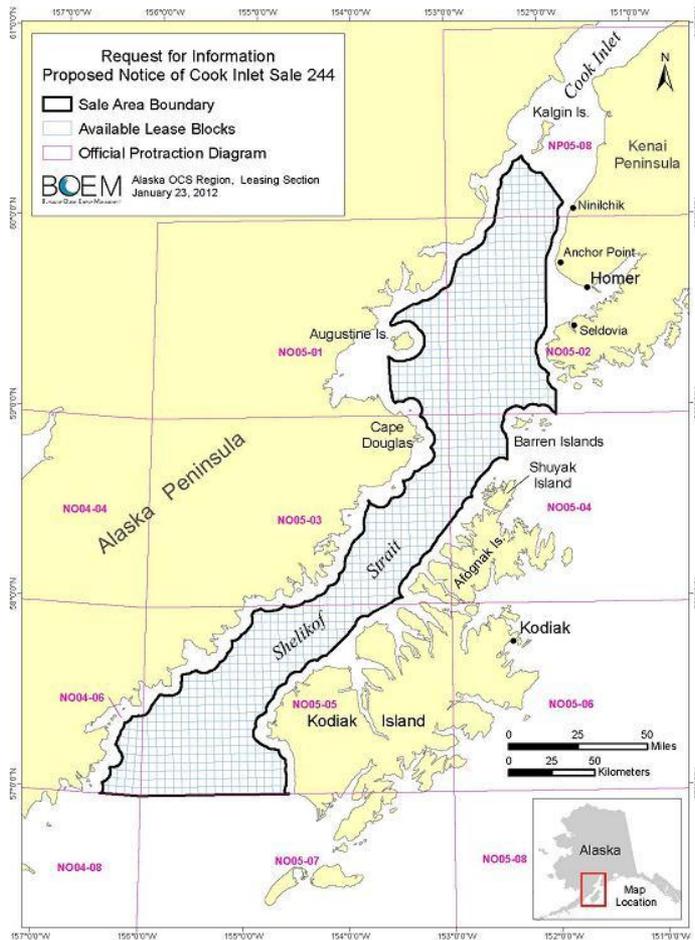

Methods:

- Mooring arrays recording continuously in deep waters of lower Cook Inlet, Shelikof Strait, & nearby downstream areas to monitor seasonal acoustic activity (biological & human-related) & oceanographic parameters
- Aerial/ship surveys to document temporal, spatial & habitat use patterns
- Short term tags to explore fine-scale movements & feeding behavior in relation to prey species & acoustic environment
- Long-term satellite tags for movement and habitat use

Attachment 1

BOEM Information Need:

This proposed study will aid in:

- Designing temporal and spatial mitigation for oil & gas activities associated with Proposed 2016 Lease Sale for Cook Inlet
- Monitoring effects of activities
- Estimating incidental take from activities (MMPA & ESA)
- Applying best available science to adaptively manage potential impacts of oil and gas on whales to reduce them to the lowest practicable level
