STUDY TITLE: The Social and Economic Consequences of Onshore – OCS-Related Activities in Coastal Alabama

REPORT TITLE: Coastal Alabama Offshore Natural Gas Economic Projection Model

CONTRACT NUMBER: 1435-01-CT-96-30829

SPONSORING OCS REGION: Gulf of Mexico OCS Region

APPLICABLE PLANNING AREAS: Western, Central and Eastern Gulf of Mexico

COMPLETION DATE OF REPORT: May 2002

COSTS: FY 95-96: $125,000; FY 97-98: $23,639; FY 97-98: $59,954; FY 98-99: $18,426

CUMULATIVE PROJECT COST: $227,019

PROGRAM MANAGER: William W. Wade

AFFILIATION: Foster Associates, Inc.

ADDRESS: 120 Montgomery Street, Suite 1776, San Francisco, CA, 94104

PRINCIPAL INVESTIGATOR: Jason R. Plater

KEY WORDS: natural gas, Mobile, Alabama, Destin Dome OCS, Louisiana, Texas, IMPLAN multipliers, calculation of economic effects, economic output, exploratory and development drilling, offshore structure costs

BACKGROUND: Following the 1979 discovery of Norphlet gas in Mobile Bay during the early 1980s, the Coastal Alabama region experienced the emergence of a large offshore gas industry. This study is the second in a series of investigations analyzing the social and economic impact of the Coastal Alabama offshore gas industry on Gulf Coast states.

OBJECTIVES: This document summarizes a Microsoft® Excel-based economic projection model developed as part of a series of investigations analyzing the social and economic impact of the Coastal Alabama offshore gas industry on Gulf Coast states.

DESCRIPTION: The model forecasts economic effects of the offshore gas industry on Mobile County, the rest of Alabama, and the combined economies of Louisiana and Texas. The model is driven by economic impact multipliers from a specially-developed...
ACCESS NUMBER: 30829

IMPLAN model, combined with estimates of industry expenditures for offshore exploration, development, and production. The model estimates past economic effects and forecasts them through 2020. Future industry activity in the Destin Dome area of the Eastern Gulf of Mexico results is also included. The model described in this document calculates the economic effects found in the study *Economic Effects of Coastal Alabama and Destin Dome Offshore Natural Gas Exploration, Development, and Production*. The above mentioned study is the third in a series of investigations analyzing the social and economic impact of the Coastal Alabama offshore gas industry on Gulf Coast states.

**SIGNIFICANT CONCLUSIONS:** This is an instructional manual and therefore contains no conclusions or study results. Conclusions of the model are detailed in *Economic Effects of Coastal Alabama and Destin Dome Offshore Natural Gas Exploration, Development, and Production* and reflect the following:

The study found that total industry spending on exploration, development, and infrastructure to fully develop existing Coastal Alabama fields will total close to $4 billion. Expenditures for ongoing operations and maintenance will add over $3 billion more through 2020. The State of Alabama received close to a billion dollars in lease bonus payments from offshore operators in State waters during the 1980’s. Coupled with ongoing production taxes and royalties, and a share of federal 8(g) royalties for fields in the Mobile OCS, the State of Alabama and coastal counties are expected to spend close to $6 billion through 2020 from trust fund earnings. Because the principal of the trust fund is never drawn down, spending of trust fund earnings will provide a significant economic stimulus to Alabama long after gas reserves have been exhausted.

Coastal Alabama and Destin Dome OCS gas development are expected to support at least 7,000 jobs in the Gulf region over a 35 year period and could peak to 10,000 jobs in some years. Most of the employment in Louisiana and Texas occurred in the early years of development. Mobile County and Alabama employment grew as local gas-related businesses grew. Employment is not expected to peak beyond 2001 unless significant new fields are discovered and produced.

**STUDY RESULTS:** This is an instructional manual and therefore contains no conclusions or study results. Study results of the model are detailed in *Economic Effects of Coastal Alabama and Destin Dome Offshore Natural Gas Exploration, Development, and Production* and reflect the following:

The research found that the majority of expenditures, and thus jobs and income, from exploration and infrastructure (platforms and pipelines) phases of development accrue to Louisiana and Texas. Mobile County received a large share of spending from construction of onshore treatment plants and receives the majority of economic effects from ongoing operations and maintenance. Employment due to Alabama state production—dominated in later years by government spending of interest from trust funds, which grows to over $200 million annually—becomes most significant in later years.
