RE: Revised Supplementary Plan of
Development, Platform 'C', Dos
Cuadras Field, OCS P-0241

Dear Mr. Schambeck:

Please find enclosed a revised Supplementary Plan of Development for the proposed drilling program from Platform 'C', Dos Cuadras Field. This revised plan is to replace the one dated September 1, 1977. The following changes have been made:

- (1) C-52 (FP), C-13 (GP), and C-14 (EQ) have been eliminated.
- (2) C-51 and C-53 have been changed to CP DP to more adequately develop the Brown Zone.
- (3) C-46 has been changed from the DQ to the CP DP intervals.
- (4) C-31 and C-32 have been combined.
- (5) The EP interval has been added to C-43.
- (6) C-60, a CP DP producer, has been added. Bottom hole location is to the southwest of Platform "C".
- (7) An undesignated FQ GQ producer will be added to recover reserves toward Platform "B".

Results of the drilling program to date indicate that depletion in the area of Platform 'C' has occurred due to production from Platforms A and B. This revised drilling schedule eliminates four completions that would now be uneconomic but adds two wells where additional development is warranted.

If you have questions concerning this revised Supplementary Plan, I will be glad to meet with you to discuss the matter.

Sincerely,

GEB:smg
