Existing View

Field of View

Existing Landscape/ Seascape Character Description:

Like BHB01, this view is from the edge of the Beach Haven Historic District in the Borough of Beach Haven and within the Residential Beachfront SCA. A portion of this area was added to the National Register of Historic Places on July 14, 1983, for its significance in architecture and history as a beachfront resort during the 19th century. The district includes 149 contributing buildings. The adjacent Beach Haven Borough Public Beach is a popular swimming and sunbathing destination on Long Beach Island. In-season access requires a beach badge, and lifeguard and beach patrol services are provided. The KOP is located on one of many beach access paths that occur at the end of roads leading to the shoreline. This area is mostly comprised of typical single family residential vacation or permanent homes, but there are also three hotels and a condominium complex sandwiched between the homes. The dunes are large as with most in this area, angular paths traverse the dunes to provide beach access. Centre Street also has a large comfort station at the start of the beach path. At high tide, the beach is relatively narrow, and the ocean appears to occasionally encroach on the dunes. However, the dune structure is relatively healthy as evidenced by the established grasses.

Sensitivity Magr Sensitivity Rating Rationale Facto Factor Size ar View is representative of residential viewers from the beachfront homes. It is somewhat Scale Susceptibility High representative of views from a nearby historic district and the ocean view is important to user experience Geogr Extent The residents of LBI requested specific views from three locations in Beach Haven, including High Value Centre Street, suggesting that these represent locations with high value to the residents. Duratio Reversi Magni The high susceptibility and value results in Sensitivity High Rating Rating high sensitivity. LOW MEDIUM SENSITIVITY VERY SMALL SMALL MEDIUM MAGNITUDE

Project Contrast:

During clear viewing conditions, the line, form, color, occupation, motion, and lighting would strongly contrast with ocean views due to the novel form of the WTGs. Similar contrasts would occur with landform and structures and rotor motion could detract from vegetation. The presence of stacking WTGs (when WTGs rows are perfectly aligned with the viewer position) will result in discordant features on the horizon when fully visible under clear conditions.

Magnitude

nitude or	Rating	Rationale
nd	Large	The vertical scale is large, with the nearest WTGs occupying approximately 1.14 degrees or 2.07% of the vertical field of view, resulting in a visual prominence factor of 6.
raphic t	Large	The Project would occupy approximately 70 percent or 87 degrees of the 124 degree human field of view.
ion/ sibility	Fair	Long term and fully reversible.
itude 9	Large	With a large geographic extent and large vertical scale, the overall magnitude rating is large.

Existing View

Field of View

Existing Landscape/ Seascape Character **Description**:

This example of the residential beachfront SCA is characterized by large, modern residential homes that rise well above the large dunes. The architecture is incongruous with the natural beach environment. The view toward the ocean includes a quintessential beach scene with partially vegetated dunes, sand, and pristine ocean horizon. This KOP is at one of many beach access paths that occur at the end of roads leading to the shoreline. This area is mostly comprised of large, modern single family residential vacation or permanent homes. The dunes are large and have angular paths traversing them to provide beach access. Unlike Centre Street the Holyoke Avenue access point does not include a comfort station. At high tide, the beach is very narrow, and the ocean appears to regularly encroach on the dunes creating steep gouges at the toe of the dunes. The view toward the ocean includes a guintessential beach scene with partially vegetated dunes, sand, and pristine ocean horizon. The dune and beach view has high scenic integrity. The inland view is compromised by the development patterns.

Magr Sensitivity Rating Rationale Facto Factor Size ar View is representative of residential viewers from the beachfront homes. It is somewhat Scale High representative of views from a nearby historic Susceptibility district and the ocean view is important to user experience Geogr Extent The residents of LBI requested specific views from three locations in Beach Haven, including High Value Centre Street, suggesting that these represent locations with high value to the residents. Duratio Reversi Magni The high susceptibility and value results in Sensitivity High Rating Rating high sensitivity. LOW MEDIUM SENSITIVITY VERY SMALL SMALL MEDIUM MAGNITUDE

Project Contrast:

During clear viewing conditions, the line, form, color, occupation, motion, and lighting would strongly contrast with ocean views due to the novel form of the WTGs. Similar contrasts would occur with landform and structures and rotor motion could detract from vegetation. The presence of stacking WTGs (when WTGs rows are perfectly aligned with the viewer position) will result in discordant features on the horizon when fully visible under clear conditions.

Sensitivity

Horizon Occupation (% H	HFOV):	Small (19.9°,	16.0%)
Vertical Occupation:		Medium (0.71°,	1.29%)
Character Area Type:		Lar	Idscape
Character Area:		Dredged	Lagoon

Existing View

Field of View

Existing Landscape/ Seascape Character Description:

This KOP is in the Dredged Lagoon Character Area which is characterized by residential neighborhoods with seasonal and year-round homes situated along an artificial dredged waterway. This neighborhood consists of homes arranged along a tight, organized network of curvilinear local with water channels that run between the backyards of adjacent residences. The separation of land created by water channels and roadways allows individual streets to function as discrete neighborhoods, which together comprise a larger residential community. Homes on the canal typically have docks for boat mooring.

In this heavily modified landscape, the residents maintain neatly manicured yards and tidy landscape treatments. The houses are situated such that only the outermost residents have an unencumbered view of the bay and the homes further inland can not see much of it. Considering the vast natural seascape beyond, the views have a relatively high scenic integrity if not somewhat comprised by the juxtaposed development.

Sensitivity

Sensitivity Factor	Rating	Rationale	Magnitude Factor	Rating	Rationale
Susceptibility	High	Views from this location represent a small number of residents in the community who may experience this type of view from within their home, or in their yards.	Size and Scale	Medium	With a vertical occupation of 0.71 degrees the WTGs may occupy up to 1.29 percent of the human vertical field of view (55 degrees). The visual prominence rating is 4, which indicates the Project is plainly visible, but not dominant.
Value	Medium	While residents place a high value on their home and their view, value from a public perspective is not inherent in this location.	Geographic Extent	Small	The geographic extent is small as indicated by the horizon occupation of 19.9 degrees which would typically occupy about 16.0 percent of the human horizontal field of view.
		There is no recognition or protection of scenic qualities and only a small subset of the population can visit this location.	Duration/ Reversibility	Fair	Long term and fully reversible.
Sensitivity Rating	High	Due to the high susceptibility, this view is also highly sensitive.	Magnitude Rating	Small	Considering the medium size and scale, and small to medium geographic extent, the magnitude is small.
OW		MEDIUM	L	I	HIGH
		SENSITIVITY			Overall Impac
ERY SMALL		SMALL MEDIUM			Moderate
		MAGNITUDE			

Project Contrast:

During clear viewing conditions, the Project presents moderate line, form, and color contrast with landform, and structures. Motion may present strong contrast with structures and landform. The form contrast combined with rotor motion may contrast strongly with the inland bay, but line, color, and motion would present moderate contrasts due to the competing features in the view. Contrasts with vegetation will be weak due to the lack of discernible vegetation.

Existing View

Field of View

Existing Landscape/ Seascape Character Description:

This KOP is only about 700 feet east of LEHT05 and also represents the Dredged Lagoon Character Area. This KOP is in a cul-de-sac on lowa Court Road at the edge of a salt marsh. This established community features a mix of modern homes ranging from one to two storys. The inland view features residential development as far as the eye can see. A large, dredged channel enters the residential areas to the southwest of the KOP before breaking into three separate navigation courses which serve several communities. The salt marsh runs right up to the edge of the road and has rock armoring on the bay side as well as some apparent efforts to naturalize the salt marsh with plug marsh grasses. This is clearly a heavily modified landscape, but efforts are being made to maintain engineered and natural shoreline resiliency. The community has some age, with signs of disrepair in the roads, driveways, and some homes. However, from this KOP it feels a little like a quaint bay side community. The barrier island development is less intense when viewed from this location.

Sensitivity

Sensitivity Factor	Rating	Rationale	Magnitude Factor	Rating	Rationale
Susceptibility	High	Views from this location represent a small number of residents in the community who may experience this type of view from within their home, or in their yards.	Size and Scale	Medium	With a vertical occupation of 0.71 degrees the WTGs may occupy up to 1.29 percent of the human vertical field of view (55 degrees). Character Area:		Residential E	Beachfront

Existing View

Field of View

Existing Landscape/ Seascape Character Description:

This KOP is at the edge of the Residential Beachfront SCA. While the residential component is apparent when viewing north, the southern view is one of natural, undisturbed beachfront. This is a unique vantage point in that the views toward the Project include development, but the natural views do not. This KOP is very near the boundary of the Undeveloped Beach SCA. It features a very wide (up to 500 feet) beach backed by natural dunes, forest, and salt marsh. Some homes are nestled amongst the trees to the north, delineating the line of the National Wildlife Refuge. To the south, the view includes a desolate and unspoiled beach where the waves are left to carve the seascape. The view south has high scenic integrity due to the lack of development. The view northeast is marred by the onset of residential development and a large breakwater that juts out into the ocean. These elements juxtaposed with the natural seascape appear incongruous.

Soncitivity

Sensitivity Factor	Rating	Rationale	Magnitude Factor	Rating	Rationale
Susceptibility	High	Represents views from residences and is experienced by recreationalists engaged in seascape or ocean viewing. The view is an important part of the user experience.	Size and Scale	Large	With a vertical occupation of 1.20 degrees the WTGs may occupy up to 2.18 percent of the human vertical field of view (55 degrees). The visual prominence rating is 6, which indicates the Project dominates the view and occupies a significant portion of the field of view.
			Coordinatio		The geographic extent is medium as indicated by the theoretical horizon occupation of 60.5 degree which occupies about 48.8 percent of the human
Value	High	The residents of LBI requested specific views from three locations, including Holgate, suggesting that these represent locations with	three locations, including Holgate,	horizontal field of view (124 degrees). While geographic extent is bordering on large, the primary field of view is generally southwest along the undeveloped portion of the beac	
high value to the residents.	Duration/ Reversibility	Fair	Long term and fully reversible.

Existing View

Existing Landscape/ **Seascape Character Description**:

Sensitivity

This view is from the Salt March SCA, looking over the Inland Bay which receives some local use for fishing and walking and other passive recreation activities. This location is accessed through a short trail through the woods which is served by a small informal roadside parking area. There is no signage to direct the user, but there is a fishing line disposal kiosk at the head of a short, wooded trail at the end of Great Bay Boulevard. The view looks out over some remnant salt marsh across the undeveloped bay and to the barrier islands of Brigantine and LBI. Viewer can catch a very small glimpse of the ocean at the inlet between islands when the waters are rough. The historic lifesaving station (now Rutgers Field Station) sits amid the salt marshes west of the COP. Atlantic City is visible at 10.6 miles distant to the southsouthwest.

Sensitivity Factor	Rating	Rationale	Magnitude Factor	Rating	Rationale
Susceptibility	High	Represents views experienced by recreationalists engaged in seascape or ocean viewing. The view is an important part of the user experience.	Size and Scale	Large	With a vertical occupation of 1.00 degrees the WTGs may occupy up to 1.82 percent of the human vertical field of view (55 degrees). The visual prominence rating is 5, which indicates the Project strongly attracts visual attention.
Value	High	This wildlife management area, while not heavily visited, appears to be highly valued by those that do visit. Also, its designation as a WMA will	Geographic Extent	Large	The geographic extent is medium as indicated by the theoretical horizon occupation of 67.1 degree which occupies about 54.1 percent of the human horizontal field of view (124 degrees).
		preserve the natural environment and protect it from future alteration or development.	Duration/ Reversibility	Fair	Long term and fully reversible.
Sensitivity Rating	High	Due to high susceptibility and value, the sensitivity is also high.	Magnitude Rating	Large	Considering the large size and scale, and large geographic extent, the magnitude is Large.

Vertical Occupation:	Medium (0.67°, 1.23%)	
Character Area Type:	Landscape	
Character Area:	Salt Marsh	

Existing View

Field of View

Existing Landscape/ Seascape Character Description:

Sensitivity

This view is from the Edwin B. Forsythe NWR in Galloway Township, New Jersey in the Salt Marsh LCA. This NWR protects more than 48,000 acres of southern New Jersey coastal habitats, primarily salt marsh interspersed with shallow coves and bays. The refuge's location in one of the Atlantic Flyways most active flight paths makes it an important link in seasonal bird migration. The refuge includes several scenic trails that pass through coastal wetlands, freshwater ponds, early successional fields, and woodlands. The refuge offers a non-motorized boat launch on Lily Lake, and motorized boat access at Scott's Landing boat launch. The refuge also features a Visitor Information Center, from which visitors can access the Wildlife Drive, an 8-mile auto tour through one of the best birding areas in the region. The Wildlife Drive features two wildlife observational towers (one of which is this KOP), a boardwalk extending over the salt marsh with views of the Atlantic City skyline, and links to a network of trails, providing opportunities for hiking, wildlife observation, and photography.

The open water, low vegetation, and broad expanse of unbroken sky give the view an open, panoramic character. The landscape appears largely undeveloped, giving this view high scenic integrity.

Magr Sensitivity Rating Rationale Facto Factor Size ar Represents views experienced by recreationalists engaged in landscape and wildlife The view is Scale Susceptibility High an important part of the user experience. In fact, the platform is specifically situated for the purpose of the elevated landscape view. Geogr Rating completed during the spring migration Extent and the area seemed to have a moderate number of viewers during the weekday. The Value High observation tower was lightly used and most users appear to drive the roads and stop Duratio occasionally to photograph. The roads would Reversi not support very large crowds of people. Magni Due to high susceptibility and value, the Sensitivity High Rating Rating sensitivity is also high. LOW MEDIUM SENSITIVITY VERY SMALL SMALL MEDIUM MAG ITUDE

Project Contrast:

During clear viewing conditions, the WTGs present moderate line and form contrast with landform and the inland bay/salt marsh. Turbine motion and lighting will result in moderate contrast, and are likely to attract viewer attention, when visible. Due to the small number of structures on the barrier island, there is minimal scale contrast, but moderate scale contrast may occur when viewed on plane with Barnegat lighthouse and a water tower.

Magnitude

nitude or	Rating	Rationale
nd	Medium	With a vertical occupation of 0.67 degrees the WTGs may occupy up to 1.23 percent of the human vertical field of view (55 degrees). The visual prominence rating is 4, which indicates the Project is visible, but not dominant to existing features in the view.
raphic t	Medium	The geographic extent is medium as indicated by the theoretical horizon occupation of 51.3 degrees which occupies about 41.4 percent of the human horizontal field of view (124 degrees).
ion/ sibility	Fair	Long term and fully reversible.
iitude g	Medium	Considering the medium size and scale, and medium geographic extent, the magnitude is also medium.

Character Area:		Undeveloped Beach

Existing View

Field of View

Existing Landscape/ Seascape Character Description:

This view is from the Undeveloped Beach SCA in North Brigantine State Natural Area, between developed portions of the City of Brigantine, New Jersey and Brigantine Inlet. The North Brigantine Natural Area was acquired by the state in 1967 and is managed by the New Jersey Department of Environmental Protection. The view to East includes an undeveloped sandy beach at low tide. An expanse of relatively level exposed sand extends from the wrack line in the immediate foreground to a line of breaking waves in the middle ground. Shorebirds can be seen on the beach at the water's edge. Beyond the surf line, the dark blue gray ocean extends without interruption to the horizon line where it meets the light blue sky. The action and texture of the breaking waves in the middle ground contrast with the smoothness of the sand and sky. The existing view lacks any manmade features other than some old pilings at the water's edge outside the selected field of view (to the right). This, along with the lack of people on the beach, gives the view an undeveloped natural character.

Sensitivity

Sensitivity	Rating	Rationale	Magnitude	Rating	Rationale
Factor			Factor		
Susceptibility	High	Represents views experienced by recreationalists engaged in seascape and ocean viewing. The view is an important part of the user experience.	Size and Scale	Large	With a vertical occupation of 0.98 degrees the WTGs may occupy up to 1.79 percent of the human vertical field of view (55 degrees). The visual prominence rating is 5, which indicates the Project may strongly attract visual attention.
Value	High	While not a high number of users, the state protects this regionally rare undeveloped area.	Geographic Extent	Medium	The geographic extent is medium as indicated by the theoretical horizon occupation of 60.4 degrees which occupies about 48.7 percent of the human horizontal field of view (124 degrees).
		protects this regionally rare undeveloped area.	Duration/ Reversibility	Fair	Long term and fully reversible.
Sensitivity Rating	High	Due to high susceptibility and value, the sensitivity is also high.	Magnitude Rating	Large	Considering the large size and scale, and medium geographic extent, the magnitude is also large.

Existing View

Field of View

Existing Landscape/ Seascape Character **Description**:

Although viewed from am urbanized setting, the existing view is a relatively pristine, uninterrupted vista of the open ocean that will be experienced by visitors to the casino's Sky Garden. The orange band of color in the sky and its contrast with the dark ocean, along with the general lack of competing landscape features, enhances the expansive feel of the view and draws the viewer's eye to the horizon. Although viewed from am urbanized setting, the existing view is a relatively pristine, uninterrupted vista of the open ocean that will be experienced by visitors to the casino's Sky Garden. The orange band of color in the sky and its contrast with the dark ocean, along with the general lack of competing landscape features, enhances the expansive feel of the view and draws the viewer's eye to the horizon. Despite the high integrity of the ocean and horizon, the overall view has moderate scenic integrity due to the lack of orderly development around the Casino. Empty lots surrounded by chain link fence, large stone groins, standalone buildings with highly variable, and uninteresting architectural styles detract from view.

Sensitivity

Sensitivity Factor	Rating	Rationale	Magnitude Factor	Rating	Rationale
Susceptibility	High	The view is an important part of the user experience.	Size and Scale	Medium	With a vertical occupation of 0.70 degrees the WTGs may occupy up to 1.27 percent of the human vertical field of view (55 degrees). The visual prominence rating is 4, which indicates the Project will be plainly visible, but not dominant.
Value	High	This is a highly publicized and important part of the tourism industry and the Ocean Casino	Geographic Extent	Medium	The geographic extent is medium as indicated by the theoretical horizon occupation of 47.6 degrees which occupies about 38.4 percent of the human horizontal field of view (124 degrees).
		along with its patrons appreciate and value the experience offered by the Sky Garden.	Duration/ Reversibility	Fair	Long term and fully reversible.

Existing View

Field of View

Existing Landscape/ Seascape Character **Description**:

This is an example of the Commercial Beachfront SCA is near the Historic Atlantic City Convention Hall in Atlantic City, New Jersey. As with many of the Commercial Beachfronts in the GAA, the beach is very wide, extending some 500 feet from the dunes and boardwalk. The wide, wooden boardwalk serves as the frontage for hundreds of commercial enterprises including, hotels, casinos, restaurants, and bars. There are also several vacant spaces at the boardwalk level. Most buildings are multistory and many are high-rises with shiny, sometimes reflective surfaces. Landscape and natural vegetation is sparse in this area and restricted to the dune or in small pockets where businesses have placed landscaping in containers. False vegetation is also fairly common along this commercial beachfront. This KOP is located in the approximate center of an expansive white sand beach. The beach slopes gently to the calm ocean which offers a view to the horizon, occasionally interrupted by beach umbrellas or pier development. On the west side of the beach, a thin strip of dunes and dune vegetation undulates in front of the boardwalk, which is minimally visible from this vantage point. Beyond the boardwalk, high rise buildings extend into the sky.

Sensitivity

Sensitivity	Rating	Rationale	Magnitude	Rating	Rationale
Factor			Factor		
Susceptibility	High	The view is an important part of the user experience.	Size and Scale	Medium	With a vertical occupation of 0.60 degrees the WTGs may occupy up to 1.09 percent of the human vertical field of view (55 degrees). The visual prominence rating is 4, which indicates the Project will be plainly visible, but not dominant.
					The geographic extent is small as indicated by the theoretical horizon occupation of 13.0 degrees
Value	High	Very high summer viewership in the popular boardwalk/beach destination.		Small	which occupies about 10.4 percent of the human horizontal field of view (124 degrees). This is mainly due to the large pier north of the KOP that obstructs WTGs from view.
			Duration/ Reversibility	Fair	Long term and fully reversible.
Sensitivity Rating	High	Due to high susceptibility and value, the sensitivity is also high.	– Magnitude Rating	Small	Considering the medium size and scale, and small geographic extent, the magnitude is small.
.OW		MEDIUM			HIGH
		SENSITIVITY			Overall Impac
/ERY SMALL		SMALL MEDIUM			LARGE
		MAGNITUDE			

Project Contrast:

During clear viewing conditions, the WTGs present moderate form and motion contrast with the ocean and structures in the view. However, the line, color, and scale contrasts are weak particularly when viewed against the other visual intrusions along the shoreline. These features will remain dominant and the WTGs will be secondary even when considering motion and lighting, which is already a strong feature of the view.

Field of View

Existing Landscape/ Seascape Character Description:

Sensitivity

This is an example of the Commercial Beachfront SCA is near the Historic Atlantic City Convention Hall in Atlantic City, New Jersey. Built in 1926 in the Art Deco style, and designated as a National Historic Landmark in 1987, it is one of the only surviving buildings from the city's heyday as a popular seaside resort. The Commercial Beachfront is this area is unique in that the commercial and retail spaces jut out into the ocean, enclosing specific sections of natural beach. The area is highly developed and visually cluttered, due to the various colors, materials, forms, and scale of the man-made structures. Playground Pier extends out over the beach and into the ocean surf which draws and holds the viewers' attention. The pier is constructed in an uninteresting architectural style and appears in very poor condition with missing panels, vacant billboards, and steel lattice extending high into the sky.

Sensitivity Factor	Rating	Rationale	Magnitude Factor	Rating	Rationale
Susceptibility	High	The view is clearly not an important part of the user experience, but this KOP is on the historic Chicken Bone Beach at the foot of the AC Convention Hall NHL.	Size and Scale	Medium	With a vertical occupation of 0.58 degrees the WTGs may occupy up to 1.05 percent of the human vertical field of view (55 degrees). The visual prominence rating is 3, which indicates the Project visible after a brief glance.
					The geographic extent is small as indicated by the theoretical horizon occupation of 6.4 degree
Value High	Very high summer viewership in the popular boardwalk/beach destination.	Geographic Extent	Small	which occupies about 5.2 percent of the human horizontal field of view (124 degrees). This is mainly due to the Playground Pier north of the KOP that obstructs WTGs from view.	
		Duration/ Reversibility	Fair	Long term and fully reversible.	
Sensitivity Rating	High	Due to high susceptibility and value, the sensitivity is also high.	Magnitude Rating	Small	Considering the medium size and scale, and small geographic extent, the magnitude is smal
.OW	1	MEDIUM	L	1	HIGH
		SENSITIVITY			Overall Impa
/ERY SMALL		SMALL MEDIUM			LARGE Moderat
MAGNITUDE					iviouerat

Project Contrast:

During clear viewing conditions, the WTGs present moderate form and motion contrast with the ocean and structures in the view. However, the line, color, and scale contrasts are weak particularly when viewed against the other visual intrusions along the shoreline. These features will remain dominant and the WTGs will be secondary even when considering motion and lighting, which is already a strong feature of the view.

Character Area Type:	Seascape	
Character Area:	Commercial Beachfront	

Existing View

Field of View

Existing Landscape/ Seascape Character Description:

The Commercial Beachfront Seascape Character Area from this KOP appears chaotic and visually cluttered due to the presence of utilities, a mix of incompatible architectural styles, and competing visual interests of the commercial enterprises that make up the shoreline. The ocean and beach quickly become naturalized, but from this location, there are numerous detractions that distract from the natural environment and the ocean view. The Howdah provides an elevated vantage point from within the Commercial Beachfront in Margate. Lucy is surrounded by high-rise buildings to the north and south and Inland Residential areas to the west. The commercialization of the beachfront is apparent from this vantage point and people gather in restaurants and shops when they are not in the nearby motels and hotels or on the beach recreating or sunbathing. Despite the historic significance of Lucy, the surrounding environment detracts from, rather than contributes to, the visitor's viewing experience.

Magr Sensitivity Rating Rationale Facto Factor Despite Lucy's status as a NHL, the setting and view are not significant criteria in its Size ar status or importance due to its relocation. The novelty of the structure is the sole draw for Scale Susceptibility Low visitors and not many people spend time in the Howdah. The development surrounding Lucy does nothing to enhance the viewer experience and ocean views are severely compromised. Geogra Extent Lucy's iconic in social media, television, and from an NHL perspective. It is a unique High Value attraction that has been well cared for and has become a beloved icon of Margate and the Duratio Jersey Shore. Reversi Magnit Due to high susceptibility and value, the Sensitivity Medium Rating Rating sensitivity is also high.

Sensitivity

LOW MEDIUM SENSOIVITY VERY SMALL SMALL MEDIUM MEDIUM MEDIUM

Project Contrast:

During clear viewing conditions, the WTGs rotor motion would result in moderate contrasts with the ocean horizon for the portion of the Project that occurs over the ocean horizon. Moderate form, color, and vertical scale contrasts are also possible on the ocean horizon. The contrast with structures would be weak across all impact producing factors.

Magnitude

nitude or	Rating	Rationale	
nd	Medium	With a vertical occupation of 0.47 degrees the WTGs may occupy up to 0.87 percent of the human vertical field of view (55 degrees). The visual prominence rating is 2, which indicates the Project visible scanning in the general direction of the WTGs.	
raphic t	Small	The horizon occupation of 38.5 degrees would typically result in a medium geographic extent, but in this case, approximately 25.5 degrees of this is obstructed by a large building. However, WTGs are visible either side of it resulting in approximately 13 degrees of WTG occupation or 10.4 percent of the human field of view.	
ion/ sibility	Fair	Long term and fully reversible.	
itude 9	Small	Considering the medium size and scale, and small geographic extent, the magnitude is small.

Character Area Type:	Seascape
Character Area:	Residential Beachfront

Existing View

Field of View

Existing Landscape/ Seascape Character Description:

Sensitivity

This KOP is in the Residential Beachfront SCA adjacent to a large, sprawling inland residential community. The KOP is on the beach access path just off East Atlantic Boulevard. The access path is a wooden boardwalk that crosses the dunes. At East Atlantic Boulevard there is head in, street side parking as well as waste disposal facilities and a bike rack. The area is heavily residential, but East Atlantic Boulevard and the dunes provide a big gap between the beach and the developed areas. The beach is expansive and gradually slopes down to the ocean. It the time of the visit, the ocean was very rough with big breaks and white froth consuming a portion of the distant horizon. In the distance, the high-rises in Atlantic City are a major focal point. The Ocean Casino Resort in Atlantic City appears as a solid mass on the ocean horizon at a distance of approximately 8.95 miles.

Magr Sensitivity Rating Rationale Facto Factor Size ar Views from residences and experienced Scale by local/seasonal residents, tourist, and Susceptibility High recreational users. Seascape and Ocean views are important to the users. Geogr Extent This location has accommodation for High larger beach crowds and appears in Online Value advertisements and guidebooks, etc. Duratio Reversi Magni Sensitivity Highly susceptible and high value seascape High Rating Rating results in high sensitivity. LOW MEDIUM SENSITIVITY VERY SMALL SMALL MEDIUM MAGNITUDE

Project Contrast:

During clear viewing conditions, the motion of the rotors may attract viewer attention. At times the Project may result in moderate color contrast with the ocean and landforms in the view. Moderate line and form contrasts occur with the ocean, due to the vertical line on the horizon and WTG rotors. Lighting contrast is anticipated to be weak due to the presence of abundant light pollution resulting from Atlantic City which is in the direction of this view.

Magnitude

nitude or	Rating	Rationale
nd	Small	With a vertical occupation of 0.36 degrees the WTGs may occupy up to 0.65 percent of the human vertical field of view (55 degrees). The visual prominence rating is 3, which indicates the Project may be visible after only a brief glance in the direction of the project facilities
raphic t	Small	The geographic extent is small as indicated by the theoretical horizon occupation of 27.5 degrees which occupies about 22.2 percent of the human horizontal field of view (124 degrees).
ion/ sibility	Fair	Long term and fully reversible.
iitude g	Small	Small geographic extent and small scale contrast.

Character Area:	Commercial Beachfront

Existing View

Field of View

Existing Landscape/ Seascape Character Description:

The Commercial Beachfront Seascape Character Area includes a deep (wide) beach that provides a buffer between the shoreline development and the natural waterfront. The scale of the development contrasts with the natural beach setting, with high-contrast colors, big steel amusement rides, and tall hotels or residential complexes. However, this is a quintessential commercial beachfront example. The dunes provide somewhat of a visual barrier between the development and the beach, and the buildings are not so tall as to detract entirely from the beach setting. However, at night the lighting is overwhelming to the viewers on the dark beach. The existing view to the east from the selected location looks up the beach along the surf line. The beach slopes gently toward the line of breaking waves that angle from the foreground to the background (right to left) across the view. A scattering of people on the beach and the large breaking waves gives the view a dynamic feel. Little of the ocean is visible beyond the surf, but the thin line of dark water behind the waves presents strong contrast with the hazy white sky at the horizon. The sky transitions to blue overhead and, looking into the sun, people on the beach appear strongly backlit.

Sensitivity Magr Sensitivity Rating Rationale Facto Factor Size ar Views from residences and experienced Scale by local/seasonal residents, tourist, and Susceptibility High recreational users. Seascape and Ocean views are important to the users. Geogr Extent This location has accommodation for High Value larger beach crowds and appears in Online advertisements and guidebooks, etc. Duratio Reversi Magni Highly susceptible and high value seascape Sensitivity High Rating Rating results in high sensitivity. LOW MEDIUM SENSITIVITY VERY SMALL SMALL MEDIUM MAGNITUDE

Project Contrast:

During clear viewing conditions, the WTGs result in moderate line, form, and color contrast with the ocean. At times the rotor motion may attract viewer attention. Moderate line, form, motion, and lighting contrasts anticipated with landform due to the viewer orientation. A weak contrast is possible with structures given the presence of the Atlantic City high rises.

Magnitude

nitude or	Rating	Rationale
nd	Small	With a vertical occupation of 0.33 degrees the WTGs may occupy up to 0.59 percent of the human vertical field of view (55 degrees). The visual prominence rating is 2, which indicates the Project may be visible when scanning in the general direction of the project facilities.
raphic t	Small	The geographic extent is small as indicated by the theoretical horizon occupation of 28.7 degrees which occupies about 23.1 percent of the human horizontal field of view (124 degrees).
ion/ sibility	Fair	Long term and fully reversible.
iitude g	Small	Small geographic extent and small scale contrast.

Existing View

Field of View

Existing Landscape/ Seascape Character Description:

Sea Isle City is a unique Beachfront Residential community in that there has been significant effort in protecting the forested dune ecosystem. In many areas (not the KOP in particular) the dunes and forest vegetation screen inland development making the beach and shoreline appear more natural and pristine. At the KOP, there are indications of this, but the forested areas are less frequent exposing viewers to the shoreline development, which is completely out of scale with the natural features in the view. The KOP occurs along a relative wide beach which extends eastward from the undulating vegetated dunes. Beyond the dunes, large closely situated homes line the shore, completely blocking out inland views. The structures range in size, but some appear to be up to five storys and support multiple residential units. This Residential Beachfront has substantially more healthy dune vegetation further north of the KOP, including a forest buffer between the homes and the beach. The ocean, calm on the day of the visit, creates a perfectly flat and untouched horizon with the light blue to white sky.

Sensitivity

Sensitivity	y		Magnitud		
Sensitivity Factor	Rating	Rationale	Magnitude Factor	Rating	Rationale
Susceptibility	High	Views from residences and experienced by local/seasonal residents, tourist, and recreational users. Seascape and Ocean views are important to the users.	Size and Scale	Very Small	With a vertical occupation of 0.12 degrees the WTGs may occupy up to 0.23 percent of the human vertical field of view (55 degrees). The visual prominence rating is 1, which indicates the Project is only visible after extended close viewing.
Value	High	Sea Isle City clearly places value on the beach. They have expended significant effort in making connective corridors from the parking area at Waterfront Park and they are engaged in dune	Geographic Extent	Small	The geographic extent is small as indicated by the horizon occupation of 20.6 degrees which occupies about 16.6 percent of the human horizontal field of view (124 degrees).
		preservation activities, including interpretive signage, planting, and re-nourishing.	Duration/ Reversibility	Fair	Long term and fully reversible.
Sensitivity Rating	High	Highly susceptible and moderate value seascape results in high sensitivity.	Magnitude Rating	Very Small	Small geographic extent and very small scale contrast.

Project Contrast:

During extremely clear viewing conditions, the WTGs present weak line, form, and color contrast with the ocean. The significant distance presents atmospheric diffusion of the light, causing the WTG blades to become extremely difficult to see. Under the majority of viewing conditions, the Project will not be visible.

Existing View

Field of View

Existing Landscape/ Seascape Character Description:

Stone Harbor Point is a Beachfront Residential community with typical access points through the large, wide dunes. In this area, the homes have a significant setback from the beach. This is either by design, or the area is receiving regular, natural beach nourishment, which essentially adds landmass to the beach, extending it further into the ocean. This setback results in a slightly more natural beachfront because the dunes can screen a greater portion of the inland development when viewed from beach level. The inshore is made up of primarily single-family homes, and multi-family complexes or condominiums. A few blocks inland there are shops, recreation facilities, and inland residential areas. The KOP is on the beach access path near the Town's beach tag office. The view includes densely situated homes on the shoreline and inland that vary from 2-4 storys. Most are modern colonial, cape, and Victorian inspired designs. The oceanfront homes have decks situated on the east side of the house and large windows to take advantage of ocean views. The dunes are large, undulating masses that have variable vegetation coverage. The beach consists of a moderately wide, sandy stretch that slopes down to the ocean. The break has large swells just off the beach, but the shoreline interface is shallow and calm. In the distance, the Ocean Casino Resort (28.1 mi. distant) can barely be seen on the horizon.

Sensitivity

Sensitivity Factor	Rating	Rationale	Magnitude Factor	Rating	Rationale
Susceptibility	High	Views from residences and experienced by local/seasonal residents, tourist, and recreational users. Seascape and Ocean views are important to the users.	Size and Scale	None	With a vertical occupation of 0.07 degrees the WTGs may occupy up to 0.14 percent of the human vertical field of view (55 degrees). The is no visual prominence rating because the WTGs can not be seen at this distance.
					The geographic extent is small as indicated by the theoretical horizon occupation of 14.9
Value	High	Sea Isle City clearly places value on the beach. They have expended significant effort in making connective corridors from the parking area at Waterfront Park and they are engaged in dune	Geographic Extent	NA	degrees which occupies about 12 percent of the human horizontal field of view (124 degrees).
