Historic Sites #:

Common Name:	<u>204 3rd Street South</u>		
Historic Name:	<u>N/A</u>		
Present Use:	<u>Residential Activity, Permanent</u>		
Historic Use:	<u>Residential Activity, Permanent</u>		
Construction Date:	<u>1930</u>	Source:	<u>www.njtaxrecords.net</u>
Alteration Date(s):	<u>N/A</u>	Source:	<u>N/A</u>
Designer:	<u>N/A</u>	Physical Condition:	<u>Fair</u>
Builder:	<u>N/A</u>	Remaining Historic Fabric:	<u>Low</u>
Style:	<u>None</u>		
Form:	<u>Row</u>	Stories:	<u>2</u>
Type:	<u>N/A</u>	Bays:	<u>2</u>
Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Wood, Clapboard</u>		

Exterior Description: The resource is a heavily altered, two-story ca. 1930 residential unit measuring two bays wide and three bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl siding. The material covering the shed roof was not visible during field survey. Fenestration consists of replacement vinyl sash 1/1 windows. An enclosed one-story shed roof addition is attached to the northeast elevation and includes an offset entry. The residence is one of nine rowhouse type units.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 204 3rd Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 204 3rd Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 204 3rd Street South is recommended Not Eligible for inclusion in the NRHP.

Historic Sites #:

Common Name:	201 4 th Street South		
Historic Name:	N/A		
Present Use:	Residential Activity, Permanent		
Historic Use:	Residential Activity, Permanent		
Construction Date:	1951	Source:	www.njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Good
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	None		
Form:	Gable Front	Stories:	2
Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The resource is a heavily altered, two-story ca. 1951 Gable Front dwelling measuring three bays wide and five bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl siding. The front gable roof is covered in asphalt shingle and includes an overhanging gable on the southwest (front) elevation covering a two-story porch supported by square posts with a simple vinyl balustrade on the second story. An exterior staircase is located on the front elevation giving access to the second floor porch. Fenestration consists of replacement vinyl sash 6/1 windows with simulated panes. An integral one-bay garage is located in the rear on the northwest (side) elevation.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 201 4th Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 201 4th Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 201 4th Street South is recommended Not Eligible for inclusion in the NRHP.

Common Name:	<u>218 Vernon Place</u>		
Historic Name:	<u>N/A</u>		
Present Use:	<u>Residential Activity, Permanent</u>		
Historic Use:	<u>Residential Activity, Permanent</u>		
Construction Date:	<u>1953</u>	Source:	<u>www.njtaxrecords.net</u>
Alteration Date(s):	<u>N/A</u>	Source:	<u>N/A</u>
Designer:	<u>N/A</u>	Physical Condition:	<u>Good</u>
Builder:	<u>N/A</u>	Remaining Historic Fabric:	<u>Low</u>
Style:	<u>None</u>		
Form:	<u>Ranch</u>	Stories:	<u>2</u>
Type:	<u>N/A</u>	Bays:	<u>4</u>
Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Vinyl Siding</u>		

Exterior Description: The resource is a heavily altered, two-story ca. 1953 dwelling measuring four bays wide and two bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl siding. The side gable roof is covered in asphalt shingles with flush gable ends. Fenestration consists of replacement vinyl sash 1/1 windows. The northeast (front) elevation includes a second-story balcony with a simple vinyl balustrade supported by Doric columns with an unadorned vinyl frieze. A partial width addition projects from the second story of the northwest elevation with access via a stairway on the southeast (side) elevation. At the ground level, the porch consists of a partial width concrete block pad.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 218 Vernon Place is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 218 Vernon Place is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 218 Vernon Place is recommended Not Eligible for inclusion in the NRHP.

Historic Sites #:

Common Name:	219 2 nd Street South		
Historic Name:	N/A		
Present Use:	Residential Activity, Permanent		
Historic Use:	Residential Activity, Permanent		
Construction Date:	1955	Source:	www.njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Good
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	None		
Form:	Gable Front	Stories:	1.5
Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The resource is an altered one-and-a-half-story ca. 1955 Gable Front dwelling measuring three bays wide and two bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl siding with vinyl shake shingle on the southwest (front) elevation. The front gable roof is covered in asphalt shingle and fenestration consists of replacement vinyl sash 6/6 windows with simulated panes, vinyl sash 1/1 windows, and two tripartite picture windows on the southwest elevation. A one-story gable roof addition is attached to the northwest (side) elevation and includes a partial width hipped-shed roof addition and porch supported by square posts with a simple vinyl balustrade. Another shed roof addition is also attached to the northwest elevation. A one-bay front gable covered in vinyl shake shingle is located to the northeast (rear) of the dwelling.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 219 2nd Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 219 2nd Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 219 2nd Street South is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Siding</u>		

Exterior Description: The building at 230 3rd Street South is a one-and-a-half-story gable-front bungalow with vinyl and aluminum siding and a front porch. The porch has a hipped roof supported by square brick columns. The porch deck is concrete. The building is three bays wide and four bays deep with 1/1 replacement sash. The entrance is in the middle bay of the façade but is left of the center. There is a single window in the gable above.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 230 3rd Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 230 3rd Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 230 3rd Street South is recommended Not Eligible for inclusion in the NRHP.

Historic Sites #:

Common Name:	215 5 th Street South		
Historic Name:	N/A		
Present Use:	Residential Activity, Permanent		
Historic Use:	Residential Activity, Permanent		
Construction Date:	1951	Source:	www.njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Fair
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	None		
Form:	Ranch	Stories:	1
Type:	N/A	Bays:	2
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Aluminum		

Exterior Description: The resource is an altered, one-story ca. 1951 Ranch dwelling measuring two bays wide and four bays deep. The house rests on a concrete block foundation and is covered in aluminum siding. The side gable roof is covered in asphalt shingle and is pierced by an interior brick chimney at the slope on the northeast (rear) elevation. Fenestration consists of replacement vinyl sash 1/1 windows. A partial width addition capped by a front gable roof and including a projecting bay window is attached to the southwest (front) elevation. A secondary entrance with a simple stoop is located on the northwest (side) elevation.

Interior Description: N/A

Setting: Residential area approximately 1.5 blocks away from beach/ocean access, surrounded by similar residential housing. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 215 5th Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 215 5th Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 215 5th Street South is recommended Not Eligible for inclusion in the NRHP.

BUILDING ATTACHMENT

Historic Sites #:

Common Name:	231 5 th Street South		
Historic Name:	N/A		
Present Use:	Residential activity, permanent		
Historic Use:	Residential activity, permanent		
Construction Date:	1955	Source:	www.njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Excellent
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	None		
Form:	Gable front	Stories:	2
Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl		

Exterior Description: The resource is a heavily altered, two-story ca. 1955 Front Gable dwelling measuring three bays wide and two bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl siding. The roof is covered in asphalt shingle and includes a projecting gable on the southwest (front) elevation that covers a two-story porch resting on a concrete block foundation and supported by square wood posts. Fenestration consists of replacement vinyl sash 1/1 windows. The northeast (rear) elevation includes a second story overhanging addition with a balcony framed by a simple wood balustrade. A historic-era one-bay garage capped by a front gable roof is located to the northeast of the dwelling.

Interior Description: N/A

Setting: Residential area approximately one block away from beach/ocean access, surrounded by similar residential housing. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 231 5th Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 231 5th Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 231 5th Street South is recommended Not Eligible for inclusion in the NRHP.

Common Name:	226 5 th Street South		
Historic Name:	N/A		
Present Use:	Residential activity, permanent		
Historic Use:	Residential activity, permanent		
Construction Date:	1955	Source:	Stylistic Evidence
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Good
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	Minimal Traditional		
Form:	Ranch	Stories:	1
Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl		

Exterior Description: The resource is an altered, one-story ca. 1955 Minimal Traditional dwelling measuring three bays wide and three bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl siding. The side gable roof is covered in asphalt shingle and fenestration consists of replacement vinyl sash 1/1 windows with a tripartite picture window on the northwest (front) elevation. A partial width shed roof porch resting on a concrete block foundation and supported by turned wood posts is attached to the northwest elevation while a full width one-story shed roof addition is attached to the southeast (rear) elevation. A historic-era one-bay garage capped by a front gable roof and partially covered in vinyl siding is located to the southeast of the dwelling.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 226 5th Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 226 5th Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 226 5th Street South is recommended Not Eligible for inclusion in the NRHP.

Historic Sites #:

Common Name:	222 6 th Street South		
Historic Name:	N/A		
Present Use:	Residential Activity, Permanent		
Historic Use:	Residential Activity, Permanent		
Construction Date:	1955	Source:	www.njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Good
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	None		
Form:	Gable Front	Stories:	2
Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Aluminum and Brick		

Exterior Description: The resource is an altered, two-story ca. 1955 Gable Front dwelling measuring three bays wide and four bays deep. The house rests on a concrete block foundation and is covered in aluminum siding with stretcher bond brick veneer on the ground level of the northeast (front) elevation. The front gable roof is covered in asphalt shingle and features a projecting gable on the northwest elevation that covers porches on the second and first stories. The porch rest on a concrete block foundation and is supported by square wood posts with a simple balustrade. Fenestration consists of replacement vinyl sash 1/1 windows that are in pairs on the northwest elevation. An exterior wood staircase on the southeast (side) elevation gives access to the second floor.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 222 6th Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 222 6th Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 222 6th Street South is recommended Not Eligible for inclusion in the NRHP.

Historic Sites #:

Common Name:	<u>230 6th Street South</u>		
Historic Name:	<u>N/A</u>		
Present Use:	<u>Residential Activity, Permanent</u>		
Historic Use:	<u>Residential Activity, Permanent</u>		
Construction Date:	<u>1930</u>	Source:	<u>Njtaxrecords.net</u>
Alteration Date(s):	<u>N/A</u>	Source:	<u>N/A</u>
Designer:	<u>N/A</u>	Physical Condition:	<u>Good</u>
Builder:	<u>N/A</u>	Remaining Historic Fabric:	<u>Low</u>
Style:	<u>None</u>		
Form:	<u>Cape cod</u>	Stories:	<u>1.5</u>
Type:	<u>N/A</u>	Bays:	<u>2</u>
Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Aluminum siding</u>		

Exterior Description: The resource is an altered one-and-a-half-story ca. 1930 Colonial Revival dwelling measuring two bays wide and covered in aluminum siding. The steeply pitched side gable roof is covered in asphalt shingle and includes a shed roof dormer window. A porch on the northeast (front) elevation has been enclosed. Visible fenestration consists of replacement vinyl sash windows with simulated 6/6 panes and 1/1 windows. Foundation material was not visible at the time of survey. The house has a large setback from the southwest side of 6th street.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 230 6th Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 230 6th Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 230 6th Street South is recommended Not Eligible for inclusion in the NRHP.

BUILDING ATTACHMENT

Historic Sites #:

Common Name:	246 8 th Street South		
Historic Name:	N/A		
Present Use:	Residential activity, permanent		
Historic Use:	Residential activity, permanent		
Construction Date:	1948	Source:	Njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Good
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	None		
Form:	Cape Cod	Stories:	2
Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 246 8th Street South is a heavily altered one-and-one-half-story Cape Cod dwelling with vinyl siding and asphalt shingle roofing. The primary (northeast) elevation of the primary volume consists of a centered entry door under a small projecting canopy, flanked by bays of multiple vinyl windows on the first story, and a pair of gabled dormers at the upper story. To the southeast, a two-story addition has a low-sloped gable roof and pairs of vinyl windows with applied shutters. A second-floor deck is located at the rear.

Interior Description: N/A

Setting: The resource is located one block from Brigantine Beach in a mixed residential-commercial neighborhood. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

The building at 246 8th Street South was built in about 1948 as part of Brigantine's postwar boom in residential development.

Significance: The building at 246 8th Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 246 8th Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 246 8th Street South is recommended Not Eligible for inclusion in the NRHP.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 1900 Ocean Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 1900 Ocean Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials: Asphalt Shingle

Exterior Finish Materials Stone

Exterior Description: The building at 2201 Ocean Avenue is a circa-1982 Ranch dwelling with rubble stone exterior cladding. The complex hipped and gable-on-hip roof has deeply overhanging eaves and is clad in asphalt shingle. Fenestration consists of large single-light casement windows in gangs of four or more. The primary (northeast) elevation is asymmetrically arranged, with a recessed entry featuring a double-leaf glazed door with sidelights.

Interior Description: N/A

Setting: The resource is located one block from Brigantine Beach in a residential neighborhood, surrounded by other homes of the early twentieth through the early twenty-first centuries. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

The building at 2201 Ocean Avenue was built in about 1981, replacing an earlier building on the site.

Significance: The building at 2201 Ocean Avenue is associated with late-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Harvey Cedars is a borough in Ocean County located on the barrier island of Long Beach Island. "Harvey" is either derived from the word "harvest" or refers to an early settler who ran whaling quarters in the eighteenth century. "Cedars" refers to the cedar forest that used to cover the northern part of Long Beach Island until it was destroyed by a hurricane in 1821. The opening of the Harvey Cedars Hotel in the 1840s. The Harvey Cedars Hotel which opened in the 1840s served as a boarding house for sportsmen and was popular for its large dance hall. In the late-nineteenth century, additional boarding houses, mansions, cottages, a pavilion, a general store, and a yacht club were built in Harvey Cedars and High Point, the northern part of present-day Harvey Cedars. In addition to the summer resort industry, seaweed harvesting and fishing were major industries in Harvey Cedars and High Point in the nineteenth century. In 1886, the area became accessible directly by railroad with the construction of the Long Beach Railroad. In 1914, Harvey Cedars became accessible by automobile with the construction of a causeway over Barnegat Bay and a boulevard across the island. In the 1930s, Harvey Cedars gained a reputation as an art colony, spurring the construction of several unique and modern houses designed by prominent architects over the next several decades. In 1944, a major hurricane caused significant damage to the borough, and homes and infrastructure were subsequently rebuilt. Another storm in 1962 caused more damage to the borough, which was still recovering from the 1944 hurricane. Development accelerated in the mid- to late-twentieth century as residents rebuilt from the storm. Today, most of the borough consists of private developments and enclaves (Buchholz, 2023; Heritage Studies, Inc., 1981; Harvey Cedars Bible Conference, 2023; Gaydos, 2017).

Significance: 15 East Sussex Avenue is associated with late-twentieth-century development in Harvey Cedars Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 15 East Sussex Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 15 East Sussex Avenue is recommended Not Eligible for inclusion in the NRHP.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Harvey Cedars is a borough in Ocean County located on the barrier island of Long Beach Island. "Harvey" is either derived from the word "harvest" or refers to an early settler who ran whaling quarters in the eighteenth century. "Cedars" refers to the cedar forest that used to cover the northern part of Long Beach Island until it was destroyed by a hurricane in 1821. The opening of the Harvey Cedars Hotel in the 1840s. The Harvey Cedars Hotel which opened in the 1840s served as a boarding house for sportsmen and was popular for its large dance hall. In the late-nineteenth century, additional boarding houses, mansions, cottages, a pavilion, a general store, and a yacht club were built in Harvey Cedars and High Point, the northern part of present-day Harvey Cedars. In addition to the summer resort industry, seaweed harvesting and fishing were major industries in Harvey Cedars and High Point in the nineteenth century. In 1886, the area became accessible directly by railroad with the construction of the Long Beach Railroad. In 1914, Harvey Cedars became accessible by automobile with the construction of a causeway over Barnegat Bay and a boulevard across the island. In the 1930s, Harvey Cedars gained a reputation as an art colony, spurring the construction of several unique and modern houses designed by prominent architects over the next several decades. In 1944, a major hurricane caused significant damage to the borough, and homes and infrastructure were subsequently rebuilt. Another storm in 1962 caused more damage to the borough, which was still recovering from the 1944 hurricane. Development accelerated in the mid- to late-twentieth century as residents rebuilt from the storm. Today, most of the borough consists of private developments and enclaves (Buchholz, 2023; Heritage Studies, Inc., 1981; Harvey Cedars Bible Conference, 2023; Gaydos, 2017).

Significance: 7101 Long Beach Boulevard is associated with late-twentieth-century development in Harvey Cedars Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

In the late-nineteenth century, additional boarding houses, mansions, cottages, a pavilion, a general store, and a yacht club were built in Harvey Cedars and High Point, the northern part of present-day Harvey Cedars. In addition to the summer resort industry, seaweed harvesting and fishing were major industries in Harvey Cedars and High Point in the nineteenth century. In 1886, the area became accessible directly by railroad with the construction of the Long Beach Railroad. In 1914, Harvey Cedars became accessible by automobile with the construction of a causeway over Barnegat Bay and a boulevard across the island. In the 1930s, Harvey Cedars gained a reputation as an art colony, spurring the construction of several unique and modern houses designed by prominent architects over the next several decades. In 1944, a major hurricane caused significant damage to the borough, and homes and infrastructure were subsequently rebuilt. Another storm in 1962 caused more damage to the borough, which was still recovering from the 1944 hurricane. Development accelerated in the mid- to late-twentieth century as residents rebuilt from the storm. Today, most of the borough consists of private developments and enclaves (Buchholz, 2023; Heritage Studies, Inc., 1981; Harvey Cedars Bible Conference, 2023; Gaydos, 2017).

Significance: 6311F Long Beach Boulevard is associated with late-twentieth-century development in Harvey Cedars Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 6311F Long Beach Boulevard is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 6311F Long Beach Boulevard is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The residence at 13 East 86th Street is a two-story oceanfront shed-roof Contemporary home. The fenestration covers most of the façade wall surface and extends to the roof which rises above the second story to provide additional interior lighting. There is a large deck overlooking the ocean on the second floor. A one-story projection on the side elevation has a shed roof that is stepped down from the ridgeline of the main block. The first story is largely obscured by the dunes and vegetation.

Interior Description: N/A

Setting: The residence at 13 East 86th Street is an oceanfront property surrounded by like buildings with direct beach access. Historic aerial imagery shows development in Harvey Cedars throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with most of the area completely built-out by the 1970s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Harvey Cedars is a borough in Ocean County located on the barrier island of Long Beach Island. "Harvey" is either derived from the word "harvest" or refers to an early settler who ran whaling quarters in the eighteenth century. "Cedars" refers to the cedar forest that used to cover the northern part of Long Beach Island until it was destroyed by a hurricane in 1821. The opening of the Harvey Cedars Hotel in the 1840s. The Harvey Cedars Hotel which opened in the 1840s served as a boarding house for sportsmen and was popular for its large dance hall. In the late-nineteenth century, additional boarding houses, mansions, cottages, a pavilion, a general store, and a yacht club were built in Harvey Cedars and High Point, the northern part of present-day Harvey Cedars. In addition to the summer resort industry, seaweed harvesting and fishing were major industries in Harvey Cedars and High Point in the nineteenth century. History: Harvey Cedars is a borough in Ocean County located on the barrier island of Long Beach Island. "Harvey" is either derived from the word "harvest" or refers to an early settler who ran whaling quarters in the eighteenth century. "Cedars" refers to the cedar forest that used to cover the northern part of Long Beach Island until it was destroyed by a hurricane in 1821. The opening of the Harvey Cedars Hotel in the 1840s. The Harvey Cedars Hotel which opened in the 1840s served as a boarding house for sportsmen and was popular for its large dance hall. In the late-nineteenth century, additional boarding houses, mansions, cottages, a pavilion, a general store, and a yacht club were built in Harvey Cedars and High Point, the northern part of present-day Harvey Cedars. In addition to the summer resort industry, seaweed harvesting and fishing were major industries in Harvey Cedars and High Point in the nineteenth century. In 1886, the area became accessible directly by railroad with the construction of the Long Beach Railroad. In 1914, Harvey Cedars became accessible by automobile with the construction of a causeway over Barnegat Bay and a boulevard across the island. In the 1930s, Harvey Cedars gained a reputation as an art colony, spurring the construction of several unique and modern houses designed by prominent architects over the next several decades. In 1944, a major hurricane caused significant damage to the borough, and homes and infrastructure were subsequently rebuilt. Another storm in 1962 caused more damage to the borough, which was still recovering from the 1944 hurricane. Development accelerated in the mid- to late-twentieth century as residents rebuilt from the storm. Today, most of the borough consists of private developments and enclaves (Buchholz, 2023; Heritage Studies, Inc., 1981; Harvey Cedars Bible Conference, 2023; Gaydos, 2017).

Significance: 12 East Bergen Avenue is associated with late-twentieth-century development in Harvey Cedars Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 12 East Bergen Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 12 East Bergen Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The residence at 14 East 77th Street is a two-story oceanfront Contemporary home. The building has rectangular massing with an overhanging second story and a rectangular rooftop monitor. One corner of the façade is recessed to form a single bay porch. Fenestration is wide taking up much of the façade with a mixture of fixed sash and three-part sash with fixed center panes and flanking casements. The siding appears to be vertical flushboard on the second story and diagonal flushboard on the first story. Most of the first story is obscured by the dunes and vegetation.

Interior Description: N/A

Setting: The residence at 14 East 77th Street is an oceanfront property surrounded by like buildings with direct beach access. Historic aerial imagery shows development in Harvey Cedars throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with most of the area completely built-out by the 1970s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Harvey Cedars is a borough in Ocean County located on the barrier island of Long Beach Island. "Harvey" is either derived from the word "harvest" or refers to an early settler who ran whaling quarters in the eighteenth century. "Cedars" refers to the cedar forest that used to cover the northern part of Long Beach Island until it was destroyed by a hurricane in 1821. The opening of the Harvey Cedars Hotel in the 1840s. The Harvey Cedars Hotel which opened in the 1840s served as a boarding house for sportsmen and was popular for its large dance hall. In the late-nineteenth century, additional boarding houses, mansions, cottages, a pavilion, a general store, and a yacht club were built in Harvey Cedars and High Point, the northern part of present-day Harvey Cedars. In addition to the summer resort industry, seaweed harvesting and fishing were major industries in Harvey Cedars and High Point in the nineteenth century. In 1886, the area became accessible directly by railroad with the construction of the Long Beach Railroad. In 1914, Harvey Cedars became accessible by automobile with the construction of a causeway over Barnegat Bay and a boulevard across the island. In the 1930s, Harvey Cedars gained a reputation as an art colony, spurring the construction of several unique and modern houses designed by prominent architects over the next several decades. In 1944, a major hurricane caused significant damage to the borough, and homes and infrastructure were subsequently rebuilt. Another storm in 1962 caused more damage to the borough, which was still recovering from the 1944 hurricane. Development accelerated in the mid- to late-twentieth century as residents rebuilt from the storm. Today, most of the borough consists of private developments and enclaves (Buchholz, 2023; Heritage Studies, Inc., 1981; Harvey Cedars Bible Conference, 2023; Gaydos, 2017).

Significance: 14 East 77th Street is associated with late-twentieth-century development in Harvey Cedars Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 14 East 77th Street is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 14 East 77th Street is recommended Not Eligible for inclusion in the NRHP.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Lavallette is a borough in Ocean County, New Jersey, located on the Barnegat Peninsula to the north of Seaside Heights and to the south of Mantoloking. The area was known as Squan Beach until the Barnegat Light Improvement Company developed plans for Lavallette in 1878. The community was named for U.S. Navy Admiral Elie LaVallette who won a decisive battle on Lake Champlain during the War of 1812. Lots in Lavallette were marketed mainly to sportsmen in New Jersey, New York, and Philadelphia. In 1881, Lavallette became directly accessible from the mainland via the Philadelphia and Long Branch Railroad, attracting more visitors and residents, but development remained relatively slow over the next decades. Most residents were railroad employees, and most summer visitors were sportsmen. Despite their limited number, residents voted to incorporate Lavallette as a borough in 1887. Although the town attracted summer visitors, commercial fishing, boatbuilding, and beer and soda bottling remained the main industries through the early twentieth century. In 1911, a road was constructed along present-day Route 35 to Seaside Park, and in 1915 the Tom's River Bridge opened Lavallette to automobile traffic from the mainland via Seaside Heights. The boardwalk was constructed in the 1920s (Borough of Lavallette, 2023; Heritage Studies 1981). Today, Lavallette continues to be a popular summer destination.

Significance: The residence at 2306 Ocean Front is associated with mid-twentieth-century development in Lavallette Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

Lots in Lavallette were marketed mainly to sportsmen in New Jersey, New York, and Philadelphia. In 1881, Lavallette became directly accessible from the mainland via the Philadelphia and Long Branch Railroad, attracting more visitors and residents, but development remained relatively slow over the next decades. Most residents were railroad employees, and most summer visitors were sportsmen. Despite their limited number, residents voted to incorporate Lavallette as a borough in 1887. Although the town attracted summer visitors, commercial fishing, boatbuilding, and beer and soda bottling remained the main industries through the early twentieth century. In 1911, a road was constructed along present-day Route 35 to Seaside Park, and in 1915 the Tom's River Bridge opened Lavallette to automobile traffic from the mainland via Seaside Heights. The boardwalk was constructed in the 1920s (Borough of Lavallette, 2023; Heritage Studies 1981). Today, Lavallette continues to be a popular summer destination.

Significance: The residence at 900 Ocean Front is associated with early-twentieth-century development in Lavallette Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

Roof Finish Materials:	<u>Unknown</u>		
Exterior Finish Materials	<u>Wood, Shingles</u>		

Exterior Description: The residence at 5615 West Avenue is an elevated Ranch type house with a low gable roof. The building is clad in wood shingle siding. The fenestration on the street-facing elevation is limited. From right to left are a pair of 1/1 sash, a pedestrian door, a square 1/1 sash, and a fixed sash. The other elevations are not observable from a public right of way. The house is elevated on wood pilings that also support a wraparound deck. Two flights of stairs lead to the deck and via the deck to the entry. There is a large, enclosed bay underneath the house with a door. It appears to be some sort of plywood shed or garage but is difficult to see.

Interior Description: N/A

Setting: The building at 5615 West Avenue is in a residential neighborhood located along the shore with direct beach access. Long Beach Township, New Jersey is a township in Ocean County consisting of four noncontiguous areas on the barrier island of Long Beach Island and several uninhabited small islands in Barnegat Bay. The township consists of several unincorporated communities, including Beach Haven Park, Peahala Park, Brighton Beach, Beach Haven Crest, Brant Beach, Beach Haven Inlet, Holgate, South Beach Haven, North Beach Haven, Spray Beach, Beach Haven Gardens, Beach Haven Terrace, The Dunes, Haven Beach, North Beach High, Bar Harbor, and Loveladies. Historic aerial imagery shows development in Long Beach Township throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with most of the area completely built-out by the 1970s. The far southern end of the township remains an undeveloped National Wildlife Refuge, and the rest of the township consists of private developments and enclaves. The township is a popular summer resort (Township of Long Beach, 2023; Long Beach Island, 2023; NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Many of the communities of present-day Long Beach Township were established in the late nineteenth century and grew after the Long Beach Railroad was constructed in 1886, connecting Long Beach Island with the mainland. Loveladies was established with the Life Saving Station in 1871 and gained a train station in 1886 and a gunning club in the late nineteenth century. Peahala was developed in 1882 when a gunning organization and subsequent resort were built. Spray Beach, previously called Waverly Beach or Cranberry Hill, was developed in 1890 when W.S. Ringgold and J.L. Long purchased the land and built three cottages, one of which became the Spray Beach Hotel. In the early twentieth century, Brant Beach and Beach Haven Terrace were established by real estate developers who built train stations in these communities. In addition to summer resorts, the main industries on the island through the nineteenth century were fishing, salt production, and farming. Long Beach Township was incorporated as a township in 1899. The communities in Long Beach Township remained relatively small until the construction of the automobile causeway connecting the island to the mainland in 1914 (Heritage Studies, 1981; Snyder 2004; Spicer-McGarry, 2018).

Significance: The building at 5615 West Avenue is associated with mid-twentieth-century development in Long Beach Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Roof Finish Materials: Asphalt Shingle

Exterior Finish Materials Wood, Shingles

Exterior Description: The building at 6312 Ocean Boulevard is a one-and-one-half-story Colonial Revival-style residence. The house is clad in wood shingle siding and the fenestration is regularly spaced 1/1 replacement sash. There is a pair of gable-roofed dormers on the street facing elevation, and boxed eaves with cornice returns on each gable end. The primary entry appears to be in the side elevation forward of a one-story gable-roofed wing. The wing appears to be a single room, probably a sunroom, with banks of ribbon 1/1 windows. There is a detached garage.

Interior Description: N/A

Setting: The building at 6312 Ocean Boulevard is in a residential setting, one block from the beach. Long Beach Township, New Jersey is a township in Ocean County consisting of four noncontiguous areas on the barrier island of Long Beach Island and several uninhabited small islands in Barnegat Bay. The township consists of several unincorporated communities, including Beach Haven Park, Peahala Park, Brighton Beach, Beach Haven Crest, Brant Beach, Beach Haven Inlet, Holgate, South Beach Haven, North Beach Haven, Spray Beach, Beach Haven Gardens, Beach Haven Terrace, The Dunes, Haven Beach, North Beach High, Bar Harbor, and Loveladies. Historic aerial imagery shows development in Long Beach Township throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with most of the area completely built-out by the 1970s. The far southern end of the township remains an undeveloped National Wildlife Refuge, and the rest of the township consists of private developments and enclaves. The township is a popular summer resort (Township of Long Beach, 2023; Long Beach Island, 2023; NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Many of the communities of present-day Long Beach Township were established in the late nineteenth century and grew after the Long Beach Railroad was constructed in 1886, connecting Long Beach Island with the mainland. Loveladies was established with the Life Saving Station in 1871 and gained a train station in 1886 and a gunning club in the late nineteenth century. Peahala was developed in 1882 when a gunning organization and subsequent resort were built. Spray Beach, previously called Waverly Beach or Cranberry Hill, was developed in 1890 when W.S. Ringgold and J.L. Long purchased the land and built three cottages, one of which became the Spray Beach Hotel. In the early twentieth century, Brant Beach and Beach Haven Terrace were established by real estate developers who built train stations in these communities. In addition to summer resorts, the main industries on the island through the nineteenth century were fishing, salt production, and farming. Long Beach Township was incorporated as a township in 1899. The communities in Long Beach Township remained relatively small until the construction of the automobile causeway connecting the island to the mainland in 1914 (Heritage Studies, 1981; Snyder 2004; Spicer-McGarry, 2018).

Significance: The building at 6312 Ocean Boulevard is associated with mid-twentieth-century development in Long Beach Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 3707 South Long Beach Boulevard is an elevated two-story residence with a side gable roof. The roof has a relatively shallow pitch and the eaves project outward from the ridge line. The exterior cladding is vinyl and the fenestration appears to be a mixture of paired casement sash, fixed sash, and a single oriel window on the second story of the beach-facing elevation. Much of the beach-facing elevation is obscured by trees and the dunes, but there appears to be a shallow projection with a shed roof with sliding patio doors on the first story that opens onto a deck. There appears to be an open balcony on the second story with sliding patio doors, but it is partially obscured by trees. The foundation is high, almost the height of a story, and is parged.

Interior Description: N/A

Setting: The residence at 3707 South Long Beach Boulevard is an oceanfront property with direct beach access and is surrounded by like buildings. Long Beach Township, New Jersey is a township in Ocean County consisting of four noncontiguous areas on the barrier island of Long Beach Island and several uninhabited small islands in Barnegat Bay. Exterior Description: The building at 4909 South Long Beach Boulevard is an elevated two-story residence with irregular massing. The street-facing elevation has an inset porch which provides access to the primary entry. An overhanging gabled projection above has paired 1/1 sash. To the left of the inset and projection is a two-bay shed roof projection that has paired 1/1 sash. Above and set back is a two-bay facade with 1/1 sash. The entire building is raised up and supported by a parged foundation. The first story of the house overhangs the foundation. A single carport occupies the left bay of the basement. The right bay is set back with a pedestrian door. The beach-facing elevation features a large two-tier deck that overlooks the sea. Overall, the building is clad in vinyl shingle siding.

Exterior Description: The building at 107F Long Beach Boulevard is a two-story residential building, likely apartments, or condos. The building is on a rectangular plan perpendicular to the beach and divided into four bays across the facade. Each bay is surmounted by a pyramidal roof clad with asphalt shingles. In between bays are large wooden posts that support the wall that is otherwise entirely glazed. Along the roof eaves and on the side elevations the walls are stucco. The first and second stories are divided by a balcony slab supported underneath by wood braces. Access to the balcony and to a patio below is via sliding patio doors.

Designer: N/A **Physical Condition:** Good

Builder: N/A **Remaining Historic Fabric:** Medium

Style: None

Form: Other **Stories:** 2

Type: N/A **Bays:** 1

Roof Finish Materials: Asphalt Shingle

Exterior Finish Materials Wood, Other

Exterior Description: The building at 77D Long Beach Boulevard is a two-story oceanfront residence divided into three gabled-roof volumes. The center block is two bays across the beach-facing facade with large square fixed sash. The roof has a shallow pitch and is pierced on one side by a wide chimney stack that extends the height of the side elevation. The main block is flanked by two gabled wings, both of which are stepped back with a second-story deck. Sliding patio doors on each volume provide access to these two decks which have metal pole railings. The first story is almost entirely obscured by the dunes. The exterior wall cladding overall appears to be vertical shiplap or T-111.

Interior Description: N/A

Setting: The residence at 77D Long Beach Boulevard is an oceanfront property with direct beach access and is surrounded by like buildings. Long Beach Township, New Jersey is a township in Ocean County consisting of four noncontiguous areas on the barrier island of Long Beach Island and several uninhabited small islands in Barnegat Bay. The township consists of several unincorporated communities, including Beach Haven Park, Peahala Park, Brighton Beach, Beach Haven Crest, Brant Beach, Beach Haven Inlet, Holgate, South Beach Haven, North Beach Haven, Spray Beach, Beach Haven Gardens, Beach Haven Terrace, The Dunes, Haven Beach, North Beach High, Bar Harbor, and Loveladies. Historic aerial imagery shows development in Long Beach Township throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with most of the area completely built-out by the 1970s. The far southern end of the township remains an undeveloped National Wildlife Refuge, and the rest of the township consists of private developments and enclaves. The township is a popular summer resort (Township of Long Beach, 2023; Long Beach Island, 2023; NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Many of the communities of present-day Long Beach Township were established in the late nineteenth century and grew after the Long Beach Railroad was constructed in 1886, connecting Long Beach Island with the mainland. Loveladies was established with the Life Saving Station in 1871 and gained a train station in 1886 and a gunning club in the late nineteenth century. Peahala was developed in 1882 when a gunning organization and subsequent resort were built. Spray Beach, previously called Waverly Beach or Cranberry Hill, was developed in 1890 when W.S. Ringgold and J.L. Long purchased the land and built three cottages, one of which became the Spray Beach Hotel. In the early twentieth century, Brant Beach and Beach Haven Terrace were established by real estate developers who built train stations in these communities. In addition to summer resorts, the main industries on the island through the nineteenth century were fishing, salt production, and farming. Long Beach Township was incorporated as a township in 1899. The communities in Long Beach Township remained relatively small until the construction of the automobile causeway connecting the island to the mainland in 1914 (Heritage Studies, 1981; Snyder 2004; Spicer-McGarry, 2018).

Significance: 77D Long Beach Boulevard is associated with mid-twentieth-century development in Long Beach Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

**National
Register Criteria:**

☐ A

☐ B

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 77D Long Beach Boulevard is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 77D Long Beach Boulevard is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 201 East 31st Street is a two-story side-gabled residence with a single-story wing with a rooftop deck. The building is located on the corner with the facade looking onto 31st Street. The facade is three bays across with the fenestration matching in each bay. From left to right the fenestration is 1/1 single, 1/1 paired, and oriel with a center fixed sash flanked by 1/1. The entry appears to be in the one-story wing which is to the right of the facade. A sliding patio door enters into the one-story wing and a flight of wooden steps leads from the outside onto a rooftop deck. The deck is also accessed via sliding patio doors from the side elevation on the second story. The fenestration on the second-story side elevation is square slider sash and there is a single fanlight in the gable. There is also a brick chimney that extends from the roof of the one-story wing along the side of the main block and above the eaves. The fenestration on the wing is paired and tripartite 1/1 sash. Overall, the siding is vinyl cladding.

Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Wood, Shingles		

Exterior Description: The building at 3207 Ocean Boulevard is an elevated one-and-one-half-story Colonial Revival-style house. The house has a side-gabled roof with wide shed roof dormers on either side. On the beach-facing elevation fenestration across the dormer is 8/8 grouped in three, one, and two. On the first story of the beach-facing elevation, two-thirds of the elevation is a window wall. A fully glazed door opens onto a wraparound deck. To the right of the window wall is a set of three 8/8 sash. The residence is partially obscured by the dunes and vegetation; however, it appears that the fenestration pattern is the same on the side elevations.

Interior Description: N/A

Setting: The residence at 3207 Ocean Boulevard is an oceanfront property with direct beach access and is surrounded by like buildings. Long Beach Township, New Jersey is a township in Ocean County consisting of four noncontiguous areas on the barrier island of Long Beach Island and several uninhabited small islands in Barnegat Bay. The township consists of several unincorporated communities, including Beach Haven Park, Peahala Park, Brighton Beach, Beach Haven Crest, Brant Beach, Beach Haven Inlet, Holgate, South Beach Haven, North Beach Haven, Spray Beach, Beach Haven Gardens, Beach Haven Terrace, The Dunes, Haven Beach, North Beach High, Bar Harbor, and Loveladies. Historic aerial imagery shows development in Long Beach Township throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with most of the area completely built-out by the 1970s. The far southern end of the township remains an undeveloped National Wildlife Refuge, and the rest of the township consists of private developments and enclaves. The township is a popular summer resort (Township of Long Beach, 2023; Long Beach Island, 2023; NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Many of the communities of present-day Long Beach Township were established in the late nineteenth century and grew after the Long Beach Railroad was constructed in 1886, connecting Long Beach Island with the mainland. Loveladies was established with the Life Saving Station in 1871 and gained a train station in 1886 and a gunning club in the late nineteenth century. Peahala was developed in 1882 when a gunning organization and subsequent resort were built. Spray Beach, previously called Waverly Beach or Cranberry Hill, was developed in 1890 when W.S. Ringgold and J.L. Long purchased the land and built three cottages, one of which became the Spray Beach Hotel. In the early twentieth century, Brant Beach and Beach Haven Terrace were established by real estate developers who built train stations in these communities. In addition to summer resorts, the main industries on the island through the nineteenth century were fishing, salt production, and farming. Long Beach Township was incorporated as a township in 1899. The communities in Long Beach Township remained relatively small until the construction of the automobile causeway connecting the island to the mainland in 1914 (Heritage Studies, 1981; Snyder 2004; Spicer-McGarry, 2018).

Significance: 3207 Ocean Boulevard is associated with mid-twentieth-century development in Long Beach Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 3207 Ocean Boulevard is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 3207 Ocean Boulevard is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The residence at 1111B Long Beach Boulevard is a two-story wedge-shaped residence. It has a wide and low gabled roof that projects forward of the beach facing elevation from the center ridgeline and is supported by exposed roof purlins. One bay is stepped back to make room for a large wedge-shaped wraparound porch that curves at the corners. The porch has a rooftop deck. The fenestration appears to be primarily square slider windows with some 1/1 and fixed or awning sash on the secondary elevations. The exterior wall cladding appears to be flushboard on the main block or at least a synthetic that gives the appearance and a vertical board or synthetic on the porch.

Exterior Description: The building at 115 East New York Avenue is a two-story side gable minimal traditional home. The house rests on a parged high basement and has a central entrance that is reached by a flight of stairs and a wooden or Trex deck. The fenestration is 1/1 sash on the left bay of the façade; paired on the first story and a single sash on the second. The right bay is the same between the first and the second stories with a picture window with a fixed center sash flanked by 1/1. A brick chimney extends the height of the side elevation and rises above the roof line. The wall cladding appears to be wood shingle siding.

Interior Description: N/A

Setting: The building at 115 East New York Avenue is in a residential neighborhood located along the shore with direct beach access. Long Beach Township, New Jersey is a township in Ocean County consisting of four noncontiguous areas on the barrier island of Long Beach Island and several uninhabited small islands in Barnegat Bay. The township consists of several unincorporated communities, including Beach Haven Park, Peahala Park, Brighton Beach, Beach Haven Crest, Brant Beach, Beach Haven Inlet, Holgate, South Beach Haven, North Beach Haven, Spray Beach, Beach Haven Gardens, Beach Haven Terrace, The Dunes, Haven Beach, North Beach High, Bar Harbor, and Loveladies. History: Many of the communities of present-day Long Beach Township were established in the late nineteenth century and grew after the Long Beach Railroad was constructed in 1886, connecting Long Beach Island with the mainland. Loveladies was established with the Life Saving Station in 1871 and gained a train station in 1886 and a gunning club in the late nineteenth century. Peahala was developed in 1882 when a gunning organization and subsequent resort were built. Spray Beach, previously called Waverly Beach or Cranberry Hill, was developed in 1890 when W.S. Ringgold and J.L. Long purchased the land and built three cottages, one of which became the Spray Beach Hotel. In the early twentieth century, Brant Beach and Beach Haven Terrace were established by real estate developers who built train stations in these communities. In addition to summer resorts, the main industries on the island through the nineteenth century were fishing, salt production, and farming. Long Beach Township was incorporated as a township in 1899. The communities in Long Beach Township remained relatively small until the construction of the automobile causeway connecting the island to the mainland in 1914 (Heritage Studies, 1981; Snyder 2004; Spicer-McGarry, 2018).

Significance: 115 East New York Avenue is associated with mid-twentieth-century development in Long Beach Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey

Roof Finish Materials: Asphalt Shingle

Exterior Finish Materials Wood, Shingles

Exterior Description: The building at 1075 Long Beach Boulevard is a two-story residence with a gable roof and wraparound deck. The roof has wide overhanging eaves and there is a small gable truss on the beach-facing elevation. The second story is three bays across with a central pedestrian door opening onto the deck. It is flanked on the right by a picture window and on the left by paired 1/1 sash. Paired fixed sash occupies the gable above. The side elevations are three bays with 1/1 sash. The first story is completely obscured by the dunes. The visible elevations appear to be clad in wood shingle siding.

Interior Description: N/A

Setting: The residence at 1075 Long Beach Boulevard is an oceanfront property with direct beach access and is surrounded by like buildings. Long Beach Township, New Jersey is a township in Ocean County consisting of four noncontiguous areas on the barrier island of Long Beach Island and several uninhabited small islands in Barnegat Bay. The township consists of several unincorporated communities, including Beach Haven Park, Peahala Park, Brighton Beach, Beach Haven Crest, Brant Beach, Beach Haven Inlet, Holgate, South Beach Haven, North Beach Haven, Spray Beach, Beach Haven Gardens, Beach Haven Terrace, The Dunes, Haven Beach, North Beach High, Bar Harbor, and Loveladies. Historic aerial imagery shows development in Long Beach Township throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with most of the area completely built-out by the 1970s. The far southern end of the township remains an undeveloped National Wildlife Refuge, and the rest of the township consists of private developments and enclaves. The township is a popular summer resort (Township of Long Beach, 2023; Long Beach Island, 2023; NETR, 2023).

Exterior Description: The building at 4009 Ocean Boulevard is a heavily altered three-story beachfront house. The residence has irregular massing with one half of the roof a shed roof and the other half flat. Metal railing on the flat section appears to indicate a rooftop deck. On the beach-facing elevation, the third story is stepped back to provide space for a balcony. The upper stories overhang the first story except for on the street-facing elevation. The street-facing elevation features a recessed carport with the corner of the upper stories supported by wood pilings. The overall fenestration is a mixture of primarily paired 1/1 replacement sash and fixed sash in various orientations. The street elevation is two bays across with the left bay of the third story featuring a large fanlight over the window bay. The side elevation features a pedestrian entry in the center of the first story. Directly above spanning the second and third stories is a tripartite sash with a large fanlight above and small fixed or awning sash below. Overall, the building is clad in wood shingle siding with the space between the third-story windows and the roof line occupied by fish-scale shingles.

Interior Description: N/A

Setting: The residence at 4009 Ocean Boulevard is an oceanfront property with direct beach access and is surrounded by like buildings. Long Beach Township, New Jersey is a township in Ocean County consisting of four noncontiguous areas on the barrier island of Long Beach Island and several uninhabited small islands in Barnegat Bay. The township consists of several unincorporated communities, including Beach Haven Park, Peahala Park, Brighton Beach, Beach Haven Crest, Brant Beach, Beach Haven Inlet, Holgate, South Beach Haven, North Beach Haven, Spray Beach, Beach Haven Gardens, Beach Haven Terrace, The Dunes, Haven Beach, North Beach High, Bar Harbor, and Loveladies. Historic aerial imagery shows development in Long Beach Township throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with most of the area completely built-out by the 1970s. The far southern end of the township remains an undeveloped National Wildlife Refuge, and the rest of the township consists of private developments and enclaves. The township is a popular summer resort (Township of Long Beach, 2023; Long Beach Island, 2023; NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Many of the communities of present-day Long Beach Township were established in the late nineteenth century and grew after the Long Beach Railroad was constructed in 1886, connecting Long Beach Island with the mainland. Loveladies was established with the Life Saving Station in 1871 and gained a train station in 1886 and a gunning club in the late nineteenth century. Peahala was developed in 1882 when a gunning organization and subsequent resort were built. Spray Beach, previously called Waverly Beach or Cranberry Hill, was developed in 1890 when W.S. Ringgold and J.L. Long purchased the land and built three cottages, one of which became the Spray Beach Hotel. In the early twentieth century, Brant Beach and Beach Haven Terrace were established by real estate developers who built train stations in these communities. In addition to summer resorts, the main industries on the island through the nineteenth century were fishing, salt production, and farming. Long Beach Township was incorporated as a township in 1899. The communities in Long Beach Township remained relatively small until the construction of the automobile causeway connecting the island to the mainland in 1914 (Heritage Studies, 1981; Snyder 2004; Spicer-McGarry, 2018).

Significance: 4009 Ocean Boulevard is associated with late-twentieth-century development in Long Beach Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 4009 Ocean Boulevard is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 4009 Ocean Boulevard is recommended Not Eligible for inclusion in the NRHP.

Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 7 East Seashell Lane is heavily obscured by the dunes and by vegetation. However, based on field work it appears that the building is a three-story Post-Modern residence. There is a central three-story block with a flat roof that also serves as a deck. The second story or a third is recessed and is only just visible above the dunes on the beach-facing elevation. Below that it appears that there is a broad wraparound deck or balcony that overhangs a projecting first story. The projecting first story is partially visible on the street-facing elevation and features a pedestrian entrance. An exterior spiral metal staircase leads from the second-story balcony to the rooftop deck. Overall cladding is wood clapboard and fenestration appears to be fixed or slider sash. On the street-facing elevation, there is an inset window bay with a door that opens onto a small balcony.

Interior Description: N/A

Setting: The residence at 7 East Seashell Lane is an oceanfront property with direct beach access and is surrounded by like buildings. Exterior Description: The building at 5 East Seashell Lane is a two-story, heavily altered circa 1950 residence with irregular massing and flat and shed roofs. The house is set back from the road and is not observable from the beach. According to aerial photographs, the building is composed of three distinct volumes, only two of which are observable from the public right of way. The public-facing elevation is roughly divided into four bays. From left to right is a shed-roof bay facing the street with an overhanging second story supported by wood pilings. The primary entry appears to be within this bay adjacent to a large, fixed sash window. The fenestration on the upper elevation is irregular with square fixed sash and rectangular sash with horizontal divisions. The siding appears to be aluminum. The next bay to the right is partially subsumed into the first but rises above the roof of the adjacent bays. It is clad in blue stucco and features only fenestration in the first story. The next bay is a shed roof sky bridge with wood shingle siding, ribbon windows, and a breezeway below. The bay closest to the beach has a shed roof, wood shingle siding, and irregularly placed fenestration both fixed and paired casement. There is a metal overhang on the beach-facing elevation but the elevation itself is not observable.

Interior Description: N/A

Setting: The residence at 5 East Seashell Lane is an oceanfront property with direct beach access and is surrounded by like buildings. Long Beach Township, New Jersey is a township in Ocean County consisting of four noncontiguous areas on the barrier island of Long Beach Island and several uninhabited small islands in Barnegat Bay. The township consists of several unincorporated communities, including Beach Haven Park, Peahala Park, Brighton Beach, Beach Haven Crest, Brant Beach, Beach Haven Inlet, Holgate, South Beach Haven, North Beach Haven, Spray Beach, Beach Haven Gardens, Beach Haven Terrace, The Dunes, Haven Beach, North Beach High, Bar Harbor, and Loveladies. Historic aerial imagery shows development in Long Beach Township throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with most of the area completely built-out by the 1970s. The far southern end of the township remains an undeveloped National Wildlife Refuge, and the rest of the township consists of private developments and enclaves. The township is a popular summer resort (Township of Long Beach, 2023; Long Beach Island, 2023; NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: County tax records indicate that the residence at 5 East Seashell Lane dates to 1950. Historical aerial photographs show a house with irregular massing starting in 1956. However, it is unclear if this is the same building because it departs significantly from the footprint of the current building. The current building is clearly visible in the 1972 aerial but is composed of only two volumes: one facing the street and the other facing the beach. The 2002 aerial shows that a large addition has been constructed on the street-facing elevation that partially subsumes the original building volumes (NETR, 2023).

Many of the communities of present-day Long Beach Township were established in the late nineteenth century and grew after the Long Beach Railroad was constructed in 1886, connecting Long Beach Island with the mainland. Loveladies was established with the Life Saving Station in 1871 and gained a train station in 1886 and a gunning club in the late nineteenth century. Peahala was developed in 1882 when a gunning organization and subsequent resort were built. Spray Beach, previously called Waverly Beach or Cranberry Hill, was developed in 1890 when W.S. Ringgold and J.L. Long purchased the land and built three cottages, one of which became the Spray Beach Hotel. In the early twentieth century, Brant Beach and Beach Haven Terrace were established by real estate developers who built train stations in these communities. In addition to summer resorts, the main industries on the island through the nineteenth century were fishing, salt production, and farming. Long Beach Township was incorporated as a township in 1899. The communities in Long Beach Township remained relatively small until the construction of the automobile causeway connecting the island to the mainland in 1914 (Heritage Studies, 1981; Snyder 2004; Spicer-McGarry, 2018).

Significance: 5 East Seashell Lane is associated with mid-twentieth-century development in Long Beach Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 5 East Seashell Lane is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 5 East Seashell Lane is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 6503 Ocean Boulevard is a two-story, circa 1964 vernacular residence with a side gable roof and a rectangular plan. The building is four bays across the façade and two bays across the beach-facing elevation. The fenestration and door arrangement are exactly mirrored between the first and second stories. From the left to the right, the facade features a 1/1 replacement sash immediately adjacent to a half-glazed door. It is followed then by three bays of small 1/1 and 2/2 replacement sash with false shutters. On the beach-facing elevation, both stories have picture windows. A single 1/1 sash occupies the gable on the beach-facing elevation. A porch with a rooftop balcony wraps around the facade and beach-facing elevations with exterior second-story access on the rear-facing elevation. Overall, the siding is asbestos shingle. There is also a garage with the same siding and fenestration as the house at the back of the lot.

Interior Description: N/A

Setting: The building at 6503 Ocean Boulevard is in a residential neighborhood located along the shore with direct beach access. Long Beach Township, New Jersey is a township in Ocean County consisting of four noncontiguous areas on the barrier island of Long Beach Island and several uninhabited small islands in Barnegat Bay. Exterior Description: The building at 109 East Hobart Avenue is a two-story, circa 1980 vernacular residence with a low-pitched gabled roof and a rectangular plan. The facade is three bays across and there are two bays on the side elevations. The fenestration is 1/1 replacement sash singly or in pairs. The arrangement of window openings and sash is mirrored exactly between the first and second stories. Overall, the building is clad in vinyl shingle siding with fish scales in the gable. The building sits on pilings that are largely obscured by plywood cladding. Because of the height above grade, the entry is reached by a flight of wooden stairs and is shielded by a gabled roof projection supported by wood posts. The landing continues across the facade until it meets a two-tiered wraparound deck that extends from the right bay of the facade to the beach-facing elevation.

Interior Description: N/A

Setting: The building at 109 East Hobart Avenue is in a residential neighborhood area located along the shore with direct beach access. Exterior Description: The building at 7 Coast Avenue is a two-story, circa 1969 Modern residence. The building has a flat roof. It is four bays across the beach-facing elevation and two bays on the side elevations. The fenestration is mostly 1/1 sash with some fixed. The building is clad in wood shingle siding and appears to be resting on wood pilings, but these are obscured by skirting. From right to left, the facade is angled inward on the second story to form a balcony with access via paired patio doors. This is followed by a recess on the third bay from the right, also on the second story. The recess features paired patio doors that open onto a balcony that extends to the side elevation and is supported underneath by a cylindrical volume and a corner piling. A flight of wooden stairs between the cylindrical volume and the piling appears to lead to a pedestrian entry.

Loveladies was established with the Life Saving Station in 1871 and gained a train station in 1886 and a gunning club in the late nineteenth century. Peahala was developed in 1882 when a gunning organization and subsequent resort were built. Spray Beach, previously called Waverly Beach or Cranberry Hill, was developed in 1890 when W.S. Ringgold and J.L. Long purchased the land and built three cottages, one of which became the Spray Beach Hotel. In the early twentieth century, Brant Beach and Beach Haven Terrace were established by real estate developers who built train stations in these communities. In addition to summer resorts, the main industries on the island through the nineteenth century were fishing, salt production, and farming. Long Beach Township was incorporated as a township in 1899. The communities in Long Beach Township remained relatively small until the construction of the automobile causeway connecting the island to the mainland in 1914 (Heritage Studies, 1981; Snyder 2004; Spicer-McGarry, 2018).

Significance: 7 Coast Avenue is associated with mid-twentieth-century development in Long Beach Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

Exterior Description: The building at 15C Long Beach Boulevard is a three-story, split-level, circa-1981 Modernistic residence with a flat roof, vinyl siding, fixed metal windows, and a large deck and rooftop patio. The house has asymmetrical massing consisting of two volumes, one three stories and the other two stories, connected by a glazed stairwell. Multiple levels of cantilevered exterior balconies have either vinyl-clad parapets or steel railings.

Interior Description: N/A

Setting: The resource is a beachfront property in a residential area and is surrounded by similar residential buildings. Long Beach is a township in Ocean County consisting of four noncontiguous areas on the barrier island of Long Beach Island and several uninhabited small islands in Barnegat Bay. The township consists of several unincorporated communities, including Beach Haven Park, Peahala Park, Brighton Beach, Beach Haven Crest, Brant Beach, Beach Haven Inlet, Holgate, South Beach Haven, North Beach Haven, Spray Beach, Beach Haven Gardens, Beach Haven Terrace, The Dunes, Haven Beach, North Beach High, Bar Harbor, and Loveladies. Historic aerial imagery shows development in Long Beach Township throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with most of the area completely built-out by the 1970s. The far southern end of the township remains an undeveloped National Wildlife Refuge, and the rest of the township consists of private developments and enclaves. The township is a popular summer resort (Township of Long Beach, 2023; Long Beach Island, 2023; NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Many of the communities of present-day Long Beach Township were established in the late nineteenth century and grew after the Long Beach Railroad was constructed in 1886, connecting Long Beach Island with the mainland. Loveladies was established with the Life Saving Station in 1871 and gained a train station in 1886 and a gunning club in the late nineteenth century. Peahala was developed in 1882 when a gunning organization and subsequent resort were built. Spray Beach, previously called Waverly Beach or Cranberry Hill, was developed in 1890 when W.S. Ringgold and J.L. Long purchased the land and built three cottages, one of which became the Spray Beach Hotel. In the early twentieth century, Brant Beach and Beach Haven Terrace were established by real estate developers who built train stations in these communities. In addition to summer resorts, the main industries on the island through the nineteenth century were fishing, salt production, and farming. Long Beach Township was incorporated as a township in 1899. The communities in Long Beach Township remained relatively small until the construction of the automobile causeway connecting the island to the mainland in 1914 (Heritage Studies, 1981; Snyder 2004; Spicer-McGarry, 2018).

The building at 15C Long Beach Boulevard was constructed circa 1981 in an area of Long Beach Township that was primarily developed with upscale seaside residences in the 1970s and 1980s. A three-story addition to the south was added circa 1995 (NETR, 2023).

Significance: The building at 15C Long Beach Boulevard is associated with late-twentieth-century development in Long Beach Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The residence at 75D Long Beach Boulevard is a two-story, circa 1981 International Revival-style residence. The building has complex massing, but the fenestration pattern and arrangement of porches give it a wide horizontal appearance. The roof lines are flat and the wall cladding is a vertical flushboard. The fenestration is comprised of large fixed sash, either square or rectangular with a vertical orientation. The facade can be divided roughly into three distinct volumes. The main volume which occupies most of the facade is a rectangular block with overhanging eaves with an exceedingly wide freeze band. The first story steps back with a patio with a high knee wall and metal railings. Leading up from the patio to the second story is a wide asymmetrical flight of stairs that wraps around a broad curved bay. To the right of this main volume on the second story is a corner balcony. The second volume centers on the wide curved bay on the first story which has an empty oculus and a large cutaway section that provides pedestrian access below. Exposed wood pilings support a rooftop balcony which leads to a second-story two-tiered volume with broad overhanging eaves and a clerestory. This volume has sliding patio doors that open onto the balcony. The third volume is stepped back from the wide curved bay with a balcony on the second story and what appears to be a curved skylight. The rest of the building is obscured by the dunes and vegetation.

Interior Description: N/A

Setting: The residence at 75D Long Beach Boulevard is an oceanfront property with direct beach access and is surrounded by like buildings. Long Beach Township, New Jersey is a township in Ocean County consisting of four noncontiguous areas on the barrier island of Long Beach Island and several uninhabited small islands in Barnegat Bay. The township consists of several unincorporated communities, including Beach Haven Park, Peahala Park, Brighton Beach, Beach Haven Crest, Brant Beach, Beach Haven Inlet, Holgate, South Beach Haven, North Beach Haven, Spray Beach, Beach Haven Gardens, Beach Haven Terrace, The Dunes, Haven Beach, North Beach High, Bar Harbor, and Loveladies. Historic aerial imagery shows development in Long Beach Township throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with most of the area completely built-out by the 1970s. The far southern end of the township remains an undeveloped National Wildlife Refuge, and the rest of the township consists of private developments and enclaves. The township is a popular summer resort (Township of Long Beach, 2023; Long Beach Island, 2023; NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Many of the communities of present-day Long Beach Township were established in the late nineteenth century and grew after the Long Beach Railroad was constructed in 1886, connecting Long Beach Island with the mainland. Loveladies was established with the Life Saving Station in 1871 and gained a train station in 1886 and a gunning club in the late nineteenth century. Peahala was developed in 1882 when a gunning organization and subsequent resort were built. Spray Beach, previously called Waverly Beach or Cranberry Hill, was developed in 1890 when W.S. Ringgold and J.L. Long purchased the land and built three cottages, one of which became the Spray Beach Hotel. In the early twentieth century, Brant Beach and Beach Haven Terrace were established by real estate developers who built train stations in these communities. In addition to summer resorts, the main industries on the island through the nineteenth century were fishing, salt production, and farming. Long Beach Township was incorporated as a township in 1899. The communities in Long Beach Township remained relatively small until the construction of the automobile causeway connecting the island to the mainland in 1914 (Heritage Studies, 1981; Snyder 2004; Spicer-McGarry, 2018).

Significance: 75D Long Beach Boulevard appears to meet Criterion C in the area of architecture as an example of the International Revival style. However, the building is not yet 50 years of age which would require it to meet Criterion Consideration G. It is not exceptionally significant, therefore it is not eligible for listing to the NRHP.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 75D Long Beach Boulevard is not known to be significant under Criterion A or B. It does embody distinctive characteristics of a type, period, or method of construction, and it does represent the work of a master or possess high artistic value. However, it is less than 50 years of age and thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 75D Long Beach Boulevard is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 111 South 21st Avenue is a two-story Queen Anne-style house on a raised brick foundation. The house features a square plan with a curved south corner. A one-story porch accessed by wood steps features metal railing, square pillars, and a utility door on the basement level. Entrances on the porch include metal French and sliding doors. The house features replacement 1/1 double-hung windows throughout of varying sizes and groupings. A three-bay oriel window on the first story is framed by brackets. The first story is trabeated beneath a flared second story. The northwest elevation features a two-story set of replacement fixed cottage windows cut into the molding and siding materials. The hipped asphalt roof features flat dormers with pairs of groups of five windows. The curved southern corner of the house is topped by an engaged conical roof.

Interior Description: N/A

Setting: The building at 111 South 21st Avenue is in a residential area with near immediate access to the beach and the boardwalk and is surrounded by similar residential houses. Longport Borough is located on the southern tip of Absecon Island and adjacent to Margate City. The borough has a rectilinear street grid in the northern section close to Margate. The older section of the borough is along the narrow Point. Some of which is now underwater but was once part of the borough.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The borough of Longport City is located on the southern tip of Absecon Island and adjacent to Margate City. Developed as a seaside resort by Philadelphia businessman, Simpson McCullough, Longport was incorporated in 1898. The borough is named after McCullough's friend James Long who had owned but not developed the land prior to McCullough. Once noteworthy for its collection of late Victorian architecture, the borough has suffered from intense weather events because of its precarious position, losing 1st through 10th avenues to the ocean between 1900 and 1916. While the borough remains primarily residential in nature, its proximity to Atlantic City made it a desirable real estate market starting in the 1980s which saw much of the Victorian-era housing and historic landmarks replaced with high-density housing units (LPL, 2023; NYT, 2023).

Significance: The building at 111 South 21st Avenue is associated with late-nineteenth-century development in Longport Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 112 South 25th Avenue is a two-and-a-half-story Dutch Colonial Revival-style house featuring a low-ridged gambrel roof with sweeping eaves. The house is clad in a synthetic faux-wood siding. The fenestration consists of 1/1, double-hung synthetic windows, alone or in pairs or groups of three, typically flanked by vinyl faux shutters. The foundation is veneered in red brick and dark clinkers. On the first story, a single recessed bay on the northwest elevation features a garage door. The (southeast) ocean-facing façade features a two-story porch topped with a patio deck with vinyl posts and railings. A first-story entrance on the northeast elevation features a segmented arch recess topped by a triangular pediment. The second story flares out slightly above the first. The asphalt roof features trabeated gambrel and gabled dormers featuring windows or deep porches.

Interior Description: N/A

Setting: The building at 112 South 25th Avenue is in a residential area on the beachfront and is surrounded by similar residential buildings. Longport Borough is located on the southern tip of Absecon Island and adjacent to Margate City. The borough has a rectilinear street grid in the northern section close to Margate. The older section of the borough is along the narrow Point. Some of which is now underwater, but was once part of the borough.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The borough of Longport City is located on the southern tip of Absecon Island and adjacent to Margate City. Developed as a seaside resort by Philadelphia businessman, Simpson McCullough, Longport was incorporated in 1898. The borough is named after McCullough's friend James Long who had owned but not developed the land prior to McCullough (LPL, 2023). Once noteworthy for its collection of late Victorian architecture, the borough has suffered from intense weather events because of its precarious position, losing 1st through 10th avenues to the ocean between 1900 and 1916. While the borough remains primarily residential in nature, its proximity to Atlantic City made it a desirable real estate market starting in the 1980s which saw much of the Victorian-era housing and historic landmarks replaced with high-density housing units (LPL, 2023; NYT, 2023).

Significance: The building at 112 South 25th Avenue is associated with late-twentieth-century development in Longport Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 112 South 25th Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 112 South 25th Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 105 South 36th Avenue is a two-story Post Modern-style house. The house is set upon a raised platform supported by square piers. The platform consists of a wide-open wood patio with vinyl posts and railing, within which is set the house. The house features angled walls and large full-height windows separated by wide wood muntins. The rear (northwest) elevation is mostly blank and clad in vertical clapboard siding. The first story features a set of wide sliding doors as an entry within an angled glass curtain wall. A second-story cantilevered porch is accessed by a semi-detached stairwell door. The northeast elevation features vinyl casement windows in groups of three. The rambling, angular roof is clad in asphalt shingles.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 105 South 21st Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 105 South 21st Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 110 South 22nd Avenue is a two-and-one-half-story house clad in replacement siding. The house features a two-story full-width porch on the (northeast) façade with square columns and pilasters. Fenestration consists mainly of 2/2, double-hung metal windows alone or in groups of up to four. Siding patterns vary across the elevations to include paneled and vertical line motifs. The first story features a two-bay square bay window on the façade. A portion of the second-story porch is enclosed as a sunroom featuring windows with bottom transoms. The upper half-story features a small patio with metal railings on the porch roof. The asphalt roof features flat dormers with bands of small square windows.

Interior Description: N/A

Setting: The building at 110 South 22nd Avenue is in a residential area about half a block away from beach access. It is surrounded by similar residential properties. Longport Borough is located on the southern tip of Absecon Island and adjacent to Margate City. The borough has a rectilinear street grid in the northern section close to Margate. The older section of the borough is along the narrow Point. Some of which is now underwater but was once part of the borough.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The borough of Longport City is located on the southern tip of Absecon Island and adjacent to Margate City. Developed as a seaside resort by Philadelphia businessman, Simpson McCullough, Longport was incorporated in 1898. The borough is named after McCullough's friend James Long who had owned but not developed the land prior to McCullough (LPL, 2023). Once noteworthy for its collection of late Victorian architecture, the borough has suffered from intense weather events because of its precarious position, losing 1st through 10th avenues to the ocean between 1900 and 1916. While the borough remains primarily residential in nature, its proximity to Atlantic City made it a desirable real estate market starting in the 1980s which saw much of the Victorian-era housing and historic landmarks replaced with high-density housing units (LPL, 2023; NYT, 2023).

Significance: The building at 110 South 22nd Avenue is associated with late-nineteenth-century development in Longport Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Finish Materials	Brick		

Exterior Description: The building at 135 Seaview Court is a two-story duplex townhouse located directly on Hereford Inlet. The building has a flat roof with asphalt shingled parapets on its primary (west) and rear (east) elevations. The brick-clad primary elevation is symmetrically arranged with pairs of sliding windows flanking four entry doors at the center of the façade. Decorative elements are limited to the north unit's wrought iron railings below its second-story windows and shallow brick arches over the primary entries. The rear elevation had brick cladding below the first-floor window sills and vinyl siding above. Each of the two units has a second-story wood deck at the rear accessed by sliding glass doors.

Interior Description: N/A

Setting: The building at 135 Seaview Court is a waterfront property along a residential street where most properties have rear decks facing Hereford Inlet and the Atlantic Ocean beyond a corrugated metal and rubble stone seawall. Access to the inlet side of the properties is private. Nearby properties are generally two-story duplex townhouses of similar scale, form, and vintage with shallow front yards, a concrete sidewalk, and a narrow tree lawn along Seaview Court. These properties are part of a larger area of primarily residential properties at the northern tip of North Wildwood at the inlet connecting the Atlantic Ocean to the sound and salt marshes on the west side of the barrier islands. This area is characterized by a modified grid development pattern, with some blocks exhibiting distinctive, repetitive housing forms and other blocks exhibiting a mix of mid-twentieth- to early-twenty-first-century housing types.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 135 Seaview Court is located in a mid-twentieth-century development. While a railroad connected the northern tip of Five Mile Beach to the mainland in the late nineteenth century, historic aerial photographs show that the building, along with others on its block, were constructed between 1963 and 1970, with additional development continuing piecemeal until the present (NETR, 2023).

North Wildwood City is in Cape May County north of Wildwood City on the Atlantic coast barrier island known as Five Mile Beach. The area was used as a fishing, herding, and whale processing locale during the seventeenth and eighteenth centuries and did not have any permanent settlement until the village of Anglesea was established by Swedish fishermen around 1870. The hazardous conditions at the Hereford Inlet at the north end of the island prompted the construction of the Hereford Lighthouse, completed in 1874. A rail line was established between Cape May Courthouse and Anglesea in 1884, which, along with the Rio Grand bridge, made the island more accessible from the mainland. Shortly after, in 1885, Anglesea was designated a borough. The community was renamed North Wildwood in 1906 to capitalize on the tourist trade that was booming in their neighbor to the south. Within eleven years the municipality grew large enough to be designated as a city. The area's economic base is commercial with an emphasis on tourism, including hotels and boardwalk attractions (History of North Wildwood, NJ, 2022).

Significance: 135 Seaview Court is associated with mid-twentieth-century development in North Wildwood. The building is not representative of a significant architectural style or type and is not architecturally significant.

Historic Use: Commercial Activity, Eating, Drinking

Construction Date: 1968 **Source:** Njtaxrecords.net

Alteration Date(s): N/A **Source:** N/A

Designer: N/A **Physical Condition:** Good

Builder: N/A **Remaining Historic Fabric:** Low

Style: None

Form: Commercial **Stories:** 1

Type: N/A **Bays:** N/A

Roof Finish Materials: Asphalt Shingle

Exterior Finish Materials Wood, Shingles

Exterior Description: The building at 101 East Walnut Avenue is a one- to one-and-a-half-story restaurant located one block west of the mouth of Hereford Inlet. The building consists of multiple gable-roofed, shed-roofed, and flat-roofed volumes with asphalt shingle and rubber membrane roofs. Wall treatments include a brick veneer water table, stucco cladding, and vinyl siding. A large, covered patio is located southwest of the primary entrance on Olde New Jersey Avenue. Windows include a double-hung vinyl sash with applied muntins, a fanlight on the southwest elevation, and large fixed and casement vinyl sash at the northwest elevation. Folding glass doors and a railing along the ocean-facing northeast elevation allow it to be open-air in favorable weather. The building has multiple entrances at grade along the northwest elevation via modern glazed metal doors. A bronze statue of club owner and entertainer Thomas Francis "Cozy" Morley is located on the sidewalk adjacent to the building's northwest elevation.

Interior Description: N/A

Setting: The building at 101 East Walnut Avenue is located one block west of the mouth of Hereford Inlet in a commercial-residential area. A large municipal parking lot occupies the block between the building and the seawall. The immediate surroundings are characterized by single-family and duplex residential development of the late-nineteenth century through the mid-twentieth century and multi-unit development of the early twenty-first century, along with commercial buildings forming a linear business district along Olde New Jersey Avenue.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 101 East Walnut Avenue is in an area near the northern tip of the Five Mile Beach barrier island that developed as a vacation cottage community by the early twentieth century. Historic aerial photographs show the blocks surrounding the location of 101 East Walnut Avenue partially built out with cottages by 1920 (NETR, 2023). By the 1940s, a complex of buildings on the site was occupied by Eddy Suez's Club Avalon, a cocktail bar and entertainment venue with a primary entrance at the corner of Olde New Jersey Avenue and East Spruce Avenue. Entertainer Thomas Francis "Cozy" Morley (c. 1926-2013) bought the club in the 1950s and renamed it Cozy Morley's Club Avalon. The club was demolished between 1987 and 1991 and rebuilt as Westy's Irish Pub. A statue of Morley was erected on the northwest side of the building in 2003 (Hoffman, 2013).

North Wildwood City is in Cape May County north of Wildwood City on the Atlantic coast barrier island known as Five Mile Beach. The area was used as a fishing, herding, and whale processing locale during the seventeenth and eighteenth centuries and did not have any permanent settlement until the village of Anglesea was established by Swedish fishermen around 1870. The hazardous conditions at the Hereford Inlet at the north end of the island prompted the construction of the Hereford Lighthouse, completed in 1874. A rail line was established between Cape May Courthouse and Anglesea in 1884, which, along with the Rio Grand bridge, made the island more accessible from the mainland. Shortly after, in 1885, Anglesea was designated a borough. The community was renamed North Wildwood in 1906 to capitalize on the tourist trade that was booming in their neighbor to the south. Within eleven years the municipality grew large enough to be designated as a city. The area's economic base is commercial with an emphasis on tourism, including hotels and boardwalk attractions (History of North Wildwood, NJ, 2022).

Significance: The building at 101 East Walnut Avenue is associated with late-twentieth-century development in North Wildwood City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Although the well-known Avalon Club operated on the site of 101 East Walnut Avenue from about the 1940s through the late 1908s and was associated with notable entertainer Cozy Morley, the club was demolished and the present building on the site does not have any association with the history of entertainment in North Wildwood City. Therefore, 101 East Walnut Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 101 East Walnut Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials: Asphalt Shingle

Exterior Finish Materials Concrete Block, Rusticated

Exterior Description: The building at 8 North New York Avenue is a single-story bungalow-type residence with a hipped roof clad in asphalt shingles, and a rusticated concrete block foundation and exterior walls. A shed-roofed rear addition and infill of a portion of the former wraparound porch are sheathed in T1-11 plywood siding. The roof extends over a full-width entry porch and is supported on simple wood columns atop brick piers and a concrete block plinth. Original window openings in the masonry walls have cast stone sills and lintels. Windows throughout are vinyl 1/1 or casement sash. A small period automobile garage at the rear of the property has a pyramidal roof and wood or composite siding.

Interior Description: N/A

Setting: The building at 8 North New York Avenue occupies a mid-block lot roughly one-half block west of the mouth of Hereford Inlet in a primarily residential area. Public waterfront access is available across Pine Avenue at the North Wildwood Seawall Trail. The blocks immediately surrounding the building are characterized by raised two-story duplex and multi-unit residences of the late twentieth and early twenty-first centuries, interspersed with more modestly scaled surviving single-story and two-story residences of the early- to mid-twentieth century. The surrounding area exhibits a grid pattern of development interrupted by West Anglesea Drive, which follows a former railroad right-of-way.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Historic aerial photographs show that by 1920, scattered residential development had occurred at the northern tip of the Five Mile Beach barrier island, which has been connected to the mainland via a railroad since the late nineteenth century. 8 North New York Avenue was built in 1943. The blocks surrounding 8 North New York Avenue remained sparsely developed until after the Second World War (NETR, 2023). In recent years, many of the early-twentieth-century residences in the vicinity have been replaced with raised two-story duplex and multi-unit residential development.

North Wildwood City is in Cape May County north of Wildwood City on the Atlantic coast barrier island known as Five Mile Beach. The area was used as a fishing, herding, and whale processing locale during the seventeenth and eighteenth centuries and did not have any permanent settlement until the village of Anglesea was established by Swedish fishermen around 1870. The hazardous conditions at the Hereford Inlet at the north end of the island prompted the construction of the Hereford Lighthouse, completed in 1874. A rail line was established between Cape May Courthouse and Anglesea in 1884, which, along with the Rio Grand bridge, made the island more accessible from the mainland. Shortly after, in 1885, Anglesea was designated a borough. The community was renamed North Wildwood in 1906 to capitalize on the tourist trade that was booming in their neighbor to the south. Style:	None		
Form:	Other	Stories:	2
Type:	N/A	Bays:	1
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 3305 Pleasure Avenue South is an altered two-story cross-gabled house. The massing is complex with a central gable front forward of a series of gable-on-hip forms. The façade is a single bay with paired 1/1 sash and a wraparound porch with turned supports and scroll-sawn brackets. The porch bay facing the corner is enclosed. The entire building is elevated an entire story with a flight of steps leading to the porch. The porch is supported by pilings hidden by skirting. The side elevation that faces the street is six bays with a series of projecting bays and dormers and paired or single 1/1 sash fenestration. The foundation is parged with a carport and a pedestrian entrance.

Interior Description: N/A

Setting: The building at 3305 Pleasure Avenue South is in a residential neighborhood with tennis courts and a boardwalk along the beach. Sea Isle City occupies about two-thirds of Ludlam Island. The city is connected to the mainland and the Garden State Parkway via Sea Isle Boulevard which intersects with Landis Avenue, the primary north-south arterial in the city. The rectilinear street grid extends east and west from Landis Avenue with the cross-streets bearing number designations. Pleasure Avenue and Central Avenue run parallel to Landis Avenue.

Survey Name:	Atlantic Shores Offshore Wind – Wind Turbine Area - Aboveground Historic Properties	Date:	February 24, 2023
Surveyor:	Grant Johnson and Laura Mancuso		
Organization:	Environmental Design & Research, Landscape Architecture, Engineering & Environmental Services, D.P.C		

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Sea Isle City is in Cape May County south of Strathmere and north of Avalon on Ludlam Island. Ludlam Island is named after Joseph Ludlam who purchased the island in 1692 and used it to stock cattle and sheep. Residents from the mainland would frequent the island to hunt and fish and enjoy other recreational activities, but no permanent establishments were created. In 1880, Charles Kline Landis, inspired by a trip to Venice, Italy, purchased the island to establish a summer beachside resort. Landis began digging waterways and canals to mimic Venice, some of which are still intact along the Intracoastal. Landis began marketing the area and it quickly became a popular place to fish. In 1882, the West Jersey and Seashore Railroad came to the area, and in 1893 a second railroad was extended to the island. The population continued to grow as more full-time residents moved to the area, and Sea Isle City soon boasted numerous houses, hotels, restaurants, stores, and churches. Sea Isle City was officially incorporated as a city in 1907. The advent of the automobile provided easier access to other areas of the island, and this in turn created a trend for more affordable hotels throughout the area (The Shore Blog, 2021; SealsleNews.com, 2023).

Significance: 3305 Pleasure Avenue South is associated with early-twentieth-century development in Sea Isle City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 3305 Pleasure Avenue South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 3305 Pleasure Avenue South is recommended Not Eligible for inclusion in the NRHP.

Style: None
Form: Other **Stories:** 3
Type: N/A **Bays:** 2
Roof Finish Materials: Asphalt Shingle
Exterior Finish Materials: Wood, Shingles

Exterior Description: The building at 14 48th Street is a three-story, cross-gable house with a porch on the first story and stairs leading up to a wraparound balcony on the second story. The building appears to be a vernacular home dating to about 1900, but is heavily altered with the first story, likely the result of later elevation, a series of projecting and recessed bays with a variety of fenestration ranging from flat-arch double-hung sash to fixed segmental arch. The second-story balcony was likely originally a porch at the ground level. From the second story up the building takes a recognizable form with a two-bay by two-bay fenestration pattern with 6/6 replacement sash. The original entry is located in the right bay of the second-story façade. The wall cladding is wood shingle, and the porch is wrapped in vinyl.

Interior Description: N/A

Setting: The building at 14 48th Street is in a residential neighborhood with sidewalks and a boardwalk along the shore. Sea Isle City occupies about two-thirds of Ludlam Island. The city is connected to the mainland and the Garden State Parkway via Sea Isle Boulevard which intersects with Landis Avenue, the primary north-south arterial in the city. The rectilinear street grid extends east and west from Landis Avenue with the cross-streets bearing number designations. Pleasure Avenue and Central Avenue run parallel to Landis Avenue.

Exterior Finish Materials	Wood, Shingles		

Exterior Description: The building at 20 51st Street is a three-story elevated foursquare, with a hipped roof, dormers, and a wraparound porch supported by rusticated CMU pillars. The building has four bays on the façade and three bays on the side elevations. The fenestration is 1/1 replacement sash and the wall cladding is wood shingle. The roof dormers are hipped with the dormer on the street-facing side elevation altered with an oversized tripartite sash with the panes stacked horizontally. The sash extends below the roof eaves which was likely partially removed to accommodate the larger window. The primary entry is in the central bay of the second-story façade. The porch on the second story has a hipped roof and is supported by vinyl-wrapped square posts with a vinyl balustrade. The porch has been extended with a deck on the street-facing side elevation that then wraps around to the rear elevation. The deck is supported by wood posts instead of CMU like the porch. There is a second entry in the right bay of the façade on the first story under the porch.

Interior Description: N/A

Setting: The building at 20 51st Street is in a residential neighborhood with sidewalks located along the shoreline. Sea Isle City occupies about two-thirds of Ludlam Island. The city is connected to the mainland and the Garden State Parkway via Sea Isle Boulevard which intersects with Landis Avenue, the primary north-south arterial in the city. The rectilinear street grid extends east and west from Landis Avenue with the cross-streets bearing number designations. Pleasure Avenue and Central Avenue run parallel to Landis Avenue.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Sea Isle City is in Cape May County south of Strathmere and north of Avalon on Ludlam Island. Ludlam Island is named after Joseph Ludlam who purchased the island in 1692 and used it to stock cattle and sheep. Residents from the mainland would frequent the island to hunt and fish and enjoy other recreational activities, but no permanent establishments were created. In 1880, Charles Kline Landis, inspired by a trip to Venice, Italy, purchased the island to establish a summer beachside resort. Landis began digging waterways and canals to mimic Venice, some of which are still intact along the Intracoastal. Landis began marketing the area and it quickly became a popular place to fish. In 1882, the West Jersey and Seashore Railroad came to the area, and in 1893 a second railroad was extended to the island. The population continued to grow as more full-time residents moved to the area, and Sea Isle City soon boasted numerous houses, hotels, restaurants, stores, and churches. Sea Isle City was officially incorporated as a city in 1907. The advent of the automobile provided easier access to other areas of the island, and this in turn created a trend for more affordable hotels throughout the area (The Shore Blog, 2021; SealsleNews.com, 2023).

Significance: 20 51st Street is associated with early-twentieth-century development in Sea Isle City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 20 51st Street is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 20 51st Street is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 21 36th Street is a two-story, front gambrel Dutch Colonial with shed roof dormers and an enclosed porch with an outer deck. The dormers on either side of the roof feature cornice returns and together form a complete pediment setback from the gambrel front. The siding of the house is vinyl and the fenestration is 1/1 double-hung sash set in pairs on the first story and singly on the second. The façade is two bays across and the side elevations are three. The enclosed porch has a hipped roof and is three bays with the entrance in the left bay. The entry has a door with a glazed oval and is flanked by sidelights. The deck has a vinyl balustrade.

Interior Description: N/A

Setting: The building at 21 36th Street is in a residential neighborhood with sidewalks located near the shoreline. Sea Isle City occupies about two-thirds of Ludlam Island. The city is connected to the mainland and the Garden State Parkway via Sea Isle Boulevard which intersects with Landis Avenue, the primary north-south arterial in the city. The rectilinear street grid extends east and west from Landis Avenue with the cross-streets bearing number designations. Pleasure Avenue and Central Avenue run parallel to Landis Avenue.

Exterior Description: The building at 7407 Pleasure Avenue is a heavily altered ca. 1958 two-story front gable dwelling. The main block is two bays on the façade with the primary entrance in the left bay and an oriel window in the right bay. The residence has vinyl siding and 1/1 replacement windows. A large full-width porch is attached to the northwest (front) elevation. The porch has an oversized gable roof that extends to the window pier on the second story and is supported by square columns. There is a two-story front gable addition on the southwest (side) elevation with a carport and secondary entrance. A large brick chimney rises from the roof of the addition.

Interior Description: N/A

Setting: The resource is in a residential neighborhood area with sidewalks located along the shore. Sea Isle City occupies about two-thirds of Ludlam Island. The city is connected to the mainland and the Garden State Parkway via Sea Isle Boulevard which intersects with Landis Avenue, the primary north-south arterial in the city. The rectilinear street grid extends east and west from Landis Avenue with the cross-streets bearing number designations. Pleasure Avenue and Central Avenue run parallel to Landis Avenue.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Sea Isle City is in Cape May County south of Strathmere and north of Avalon on Ludlam Island. Ludlam Island is named after Joseph Ludlam who purchased the island in 1692 and used it to stock cattle and sheep. Residents from the mainland would frequent the island to hunt, fish, and enjoy other recreational activities, but no permanent establishments were created. In 1880, Charles Kline Landis, inspired by a trip to Venice, Italy, purchased the island to establish a summer beachside resort. Landis began digging waterways and canals to mimic Venice, some of which are still intact along the Intracoastal. Landis began marketing the area and it quickly became a popular place to fish. In 1882, the West Jersey and Seashore Railroad came to the area, and in 1893 a second railroad was extended to the island. The population continued to grow as more full-time residents moved to the area, and Sea Isle City soon boasted numerous houses, hotels, restaurants, stores, and churches. Sea Isle City was officially incorporated as a city in 1907. The advent of the automobile provided easier access to other areas of the island, creating a trend for more affordable hotels throughout the area (The Shore Blog, 2021; SealsleNews.com, 2023).

Significance: 7407 Pleasure Avenue is associated with mid-twentieth-century development in Sea Isle City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 7407 Pleasure Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 7407 Pleasure Avenue is recommended Not Eligible for inclusion in the NRHP.

Common Name: 12 52nd Street
Historic Name: N/A
Present Use: Residential activity, permanent
Historic Use: Residential activity, permanent
Construction Date: 1972 **Source:** njtaxrecords.net
Alteration Date(s): N/A **Source:** N/A
Designer: N/A **Physical Condition:** Good
Builder: N/A **Remaining Historic Fabric:** Low
Style: None
Form: Other **Stories:** 2
Type: N/A **Bays:** 2
Roof Finish Materials: Asphalt Shingle
Exterior Finish Materials: Vinyl Siding

Exterior Description: The building at 12 52nd Street is a two-story circa 1972 residence with a second-story balcony. The building is constructed on a side-gabled plan with a saltbox roof extending over the balcony. The exterior cladding is vinyl siding. The façade is two bays with patio doors in each bay on both stories.

Interior Description: N/A

Setting: The resource is in a residential neighborhood with sidewalks located along the shore, and with direct beach and boardwalk access. Sea Isle City occupies about two-thirds of Ludlam Island. The city is connected to the mainland and the Garden State Parkway via Sea Isle Boulevard which intersects with Landis Avenue, the primary north-south arterial in the city. The rectilinear street grid extends east and west from Landis Avenue with the cross-streets bearing number designations. Pleasure Avenue and Central Avenue run parallel to Landis Avenue.

Surveyor:	Grant Johnson and Laura Mancuso		
Organization:	Environmental Design & Research, Landscape Architecture, Engineering & Environmental Services, D.P.C		

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Sea Isle City is in Cape May County south of Strathmere and north of Avalon on Ludlam Island. Ludlam Island is named after Joseph Ludlam who purchased the island in 1692 and used it to stock cattle and sheep. Residents from the mainland would frequent the island to hunt, fish, and enjoy other recreational activities, but no permanent establishments were created. In 1880, Charles Kline Landis, inspired by a trip to Venice, Italy, purchased the island to establish a summer beachside resort. Landis began digging waterways and canals to mimic Venice, some of which are still intact along the Intracoastal. Landis began marketing the area and it quickly became a popular place to fish. In 1882, the West Jersey and Seashore Railroad came to the area, and in 1893 a second railroad was extended to the island. The population continued to grow as more full-time residents moved to the area, and Sea Isle City soon boasted numerous houses, hotels, restaurants, stores, and churches. Sea Isle City was officially incorporated as a city in 1907. The advent of the automobile provided easier access to other areas of the island, creating a trend for more affordable hotels throughout the area (The Shore Blog, 2021; SealsleNews.com, 2023).

Significance: 12 52nd Street is associated with late-twentieth-century development in Sea Isle City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 12 52nd Street is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 12 52nd Street is recommended Not Eligible for inclusion in the NRHP.

Type:	N/A	Bays:	6
Roof Finish Materials:	Unknown		
Exterior Finish Materials	Stucco		

Exterior Description: The building at 819 Boardwalk Center is a one-story arcade occupying a long, narrow block along the boardwalk. The east elevation features multiple glass storefronts across the full width of the building set beneath a metal marquee that curves at the corners. The storefronts consist of full-height display windows and glass sliding doors separated by wide metal muntins. Each storefront is separated by a narrow pier. Five additional storefronts are located on the south elevation. The west elevation facing Ocean Terrace features oblique recessed entrances of glass double doors and rectangular transoms at each corner, a central entrance featuring hexagonal glass display kiosks with historicist medieval detailing and spires, and symmetrical pairs of similarly designed towers flanking a storefront entrance reached by a staircase. Turrets are located at all except the northeast corner of the building. The building terminates with a crenellated parapet on three sides and a flat parapet on one.

Interior Description: N/A

Setting: The building at 819 Boardwalk Center is surrounded by other businesses along the Seaside Heights boardwalk. Historic aerial imagery shows that the current road grid in Seaside Heights was almost entirely in place by 1920 except for the northern extent of the borough, and the entire borough was completely built out by 1956. Much of the original amusement park, including the original carousel, was destroyed in a fire in 1955 (Discover Seaside Heights, 2011a, 2011b, and 2011c). More recently, much of the boardwalk was damaged by Hurricane Sandy in 2012 and was repaired over the next year. Today, Seaside Heights remains a popular tourist destination, attracting many thousands of visitors each year with its well-known boardwalk and beachside attractions.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Seaside Heights is a borough in Ocean County, New Jersey, located on the Barnegat Peninsula. The area remained a relatively undeveloped fishing community until the twentieth century when it was developed into a booming tourist destination. In 1881, the Philadelphia and Long Branch Railroad connected from the mainland to Seaside Park and went north through present-day Seaside Heights, then called North Seaside Park. The railroad was used for the burgeoning tourism industry in the area, as well as for exporting fish and importing lumber and coal. In 1909, the Manhasset Realty Company sparked rapid development of the area when they purchased tracts of land in present-day Seaside Heights to develop a beachfront resort. They quickly built roads, infrastructure, homes, and hotels in the area, hosting train trips to attract visitors and potential buyers of beachfront vacation homes. In 1915, the Tom's River Bridge opened to automobile traffic from the mainland into Seaside Heights. That same year, the Dupont Avenue Carousel was constructed on a pier in Seaside Heights, which was then followed by a boardwalk completed in 1921 (Vaz, 2010; Discover, 2011a; Discover, 2011c; Discover, 2011b).

Significance: 819 Boardwalk Center is associated with entertainment and recreation in Seaside Heights. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The property at 405 Boardwalk (Midway Steakhouse) is a one-story, free-standing building. The building features two wide open storefront bays on the east and west elevations and single bays on the north and south elevations. Bays are separated by flat narrow divisions. The building is topped with a hipped roof, clad in metal sheeting, and has wide eaves and a flat cornice. The roof is adorned by curved modular signage at each cornice, two ventilation units, and a rotating metal sign at the ridge line.

Interior Description: N/A

Setting: The Midway Steakhouse is surrounded by other businesses along the Seaside Heights boardwalk. Historic aerial imagery shows that the current road grid in Seaside Heights was almost entirely in place by 1920 except for the northern extent of the borough, and the entire borough was completely built out by 1956. Much of the original amusement park, including the original carousel, was destroyed in a fire in 1955 (Discover Seaside Heights, 2011a, 2011b, and 2011c). More recently, much of the boardwalk was damaged by Hurricane Sandy in 2012 and was repaired over the next year. Today, Seaside Heights remains a popular tourist destination, attracting many thousands of visitors each year with its well-known boardwalk and beachside attractions.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Seaside Heights is a borough in Ocean County, New Jersey, located on the Barnegat Peninsula. The area remained a relatively undeveloped fishing community until the twentieth century when it was developed into a booming tourist destination. In 1881, the Philadelphia and Long Branch Railroad connected from the mainland to Seaside Park and went north through present-day Seaside Heights, then called North Seaside Park. The railroad was used for the burgeoning tourism industry in the area, as well as for exporting fish and importing lumber and coal. In 1909, the Manhasset Realty Company sparked rapid development of the area when they purchased tracts of land in present-day Seaside Heights to develop a beachfront resort. They quickly built roads, infrastructure, homes, and hotels in the area, hosting train trips to attract visitors and potential buyers of beachfront vacation homes. In 1915, the Tom's River Bridge opened to automobile traffic from the mainland into Seaside Heights. That same year, the Dupont Avenue Carousel was constructed on a pier in Seaside Heights, which was then followed by a boardwalk completed in 1921 (Vaz, 2010; Discover, 2011a; Discover, 2011c; Discover, 2011b).

Significance: 405 Boardwalk (Midway Steakhouse) is associated with entertainment and recreation in Seaside Heights. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, Midway Steakhouse is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, Midway Steakhouse is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The property at 201 Ocean Terrace (TLC's Polish Water Ice) is a one-story commercial boardwalk building. The east elevation features two open storefront bays. The south elevation features four open storefront bays and a glass double-door entrance at the west corner. The storefronts on both elevations are covered by a pent roof clad in asphalt shingles, metal and vinyl awnings, and a wide stucco cornice. The west elevation is double in height due to the lower street-level grade. It features flat unadorned stucco walls, two small sliding-sash vinyl windows, a tripartite fixed display window, and three recessed entrances. The roof line features a gable that has been engaged with the flat roof of the building. A triple-arched parapet decorates the southwest corner of the building. The north wall is featureless and partially shared by the neighboring building.

Interior Description: N/A

Setting: TLC's Polish Water Ice is surrounded by other businesses along the Seaside Heights boardwalk. Historic aerial imagery shows that the current road grid in Seaside Heights was almost entirely in place by 1920 except for the northern extent of the borough, and the entire borough was completely built out by 1956. ELIGIBILITY WORKSHEET

Historic Sites #:

History: Seaside Heights is a borough in Ocean County, New Jersey, located on the Barnegat Peninsula. The area remained a relatively undeveloped fishing community until the twentieth century when it was developed into a booming tourist destination. In 1881, the Philadelphia and Long Branch Railroad connected from the mainland to Seaside Park and went north through present-day Seaside Heights, then called North Seaside Park. The railroad was used for the burgeoning tourism industry in the area, as well as for exporting fish and importing lumber and coal. In 1909, the Manhasset Realty Company sparked rapid development of the area when they purchased tracts of land in present-day Seaside Heights to develop a beachfront resort. They quickly built roads, infrastructure, homes, and hotels in the area, hosting train trips to attract visitors and potential buyers of beachfront vacation homes. In 1915, the Tom's River Bridge opened to automobile traffic from the mainland into Seaside Heights. That same year, the Dupont Avenue Carousel was constructed on a pier in Seaside Heights, which was then followed by a boardwalk completed in 1921 (Vaz, 2010; Discover, 2011a; Discover, 2011c; Discover, 2011b).

Significance: 211 Ocean Terrace is associated with entertainment and recreation in Seaside Heights. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 211 Ocean Terrace is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 211 Ocean Terrace is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The property at 16 Dupont Avenue (Steaks Unlimited) is a one-story brick commercial building. The building exterior is characterized by storefront bays. The east elevation features three bays, including a central recessed entrance with fixed glass walls flanked by bays of full-height retractable sliding glass walls. A single storefront bay is on the south elevation. A clipped corner features a walk-up sliding-sash service window. The flat cornice and roof are mounted by full-width rows of metal signage and an electronic marquee sign above the clipped corner. The west elevation is blank, and the north wall is shared with the neighboring building.

Interior Description: N/A

Setting: Steaks Unlimited is a commercial building in a residential and tourism area. Historic aerial imagery shows that the current road grid in Seaside Heights was almost entirely in place by 1920 except for the northern extent of the borough, and the entire borough was completely built out by 1956. Much of the original amusement park, including the original carousel, was destroyed in a fire in 1955 (Discover Seaside Heights, 2011a, 2011b, and 2011c). More recently, much of the boardwalk was damaged by Hurricane Sandy in 2012 and was repaired over the next year. Today, Seaside Heights remains a popular tourist destination, attracting many thousands of visitors each year with its well-known boardwalk and beachside attractions.

Exterior Description: The property at 401-407 Ocean Terrace (Regent and Co.) is a one-story boardwalk commercial building. The building features five open storefront bays on the east elevation and two on the south. The storefronts of both elevations are separated by flat piers, topped with sign bands, and are covered by a pent roof clad in asphalt shingles. A metal sign blade is attached to the flat roof on the east elevation. The rear (west) portion of the building is double height due to the low street-level grade and features a glass double door entrance at the southwest end of the south elevation topped by large plate glass windows. A metal sign blade is affixed to the southwest corner. The west elevation is largely blank and clad in stucco, but also features a concrete block foundation, a tripartite fixed metal window, and in-filled basement windows. The corners of the building features stucco quoins and the building terminates with a flat roof.

Interior Description: N/A

Setting: Regent and Co. is surrounded by other businesses along the Seaside Heights boardwalk. Historic aerial imagery shows that the current road grid in Seaside Heights was almost entirely in place by 1920 except for the northern extent of the borough, and the entire borough was completely built out by 1956. ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ship Bottom is a borough in Ocean County, NJ, located on the barrier island of Long Beach Island. As early as 1690, Euro-American settlers used Long Beach Island seasonally for fishing, whaling, gathering plants, and harvesting sea salt, but present-day Ship Bottom remained relatively undeveloped until the late nineteenth century. According to local history, Ship Bottom got its name in 1817 after a woman was rescued from the overturned hull of a wrecked ship. Starting in 1886 with the construction of the Long Beach Railroad, Ship Bottom served as the main access from the mainland to Long Beach Island. The Life Saving Station (originally established in 1855) and railroad brought increased development to Ship Bottom. In 1898, the home of Captain Wesley Treux became the first permanent dwelling in Ship Bottom, and in the following decades, additional cottages and resorts popped up (Long Beach Island, 2023; Ship Bottom, 2023).

In 1914, a wooden automobile causeway was built connecting the island to the mainland, which was met with great excitement and sparked rapid development in Ship Bottom and the rest of Long Beach Island in the subsequent decades. In 1925, Ship Bottom incorporated with the nearby towns of Bonnie Beach, Bonnet Beach, Edgewater Beach, and Beach Arlington into the borough of Ship Bottom-Arlington, later renamed Ship Bottom in 1947. Although the railroad bridge was washed out by a nor'easter in 1935 and subsequently abandoned, and the Life Saving Station was closed in 1949 or 1950, development in Ship Bottom continued to accelerate in the mid-twentieth century. In 1941, New Jersey Route S40 was extended from Manahawkin to Ship Bottom using the existing causeway, and in the 1950s the route was improved and renamed Route 72 (Spicer-McGarry, 2018; Ship Bottom, 2023; U.S. Life Saving Service, 2023; Long Beach Island, 2023).

Significance: The residence at 2609 Ocean Avenue is associated with mid-twentieth-century development in Ship Bottom Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

Historic Sites #:

History: Ship Bottom is a borough in Ocean County, NJ, located on the barrier island of Long Beach Island. As early as 1690, Euro-American settlers used Long Beach Island seasonally for fishing, whaling, gathering plants, and harvesting sea salt, but present-day Ship Bottom remained relatively undeveloped until the late nineteenth century. According to local history, Ship Bottom got its name in 1817 after a woman was rescued from the overturned hull of a wrecked ship. Starting in 1886 with the construction of the Long Beach Railroad, Ship Bottom served as the main access from the mainland to Long Beach Island. The Life Saving Station (originally established in 1855) and railroad brought increased development to Ship Bottom. In 1898, the home of Captain Wesley Treux became the first permanent dwelling in Ship Bottom, and in the following decades, additional cottages and resorts popped up (Long Beach Island, 2023; Ship Bottom, 2023).

In 1914, a wooden automobile causeway was built connecting the island to the mainland, which was met with great excitement and sparked rapid development in Ship Bottom and the rest of Long Beach Island in the subsequent decades. In 1925, Ship Bottom incorporated with the nearby towns of Bonnie Beach, Bonnet Beach, Edgewater Beach, and Beach Arlington into the borough of Ship Bottom-Arlington, later renamed Ship Bottom in 1947. Although the railroad bridge was washed out by a nor'easter in 1935 and subsequently abandoned, and the Life Saving Station was closed in 1949 or 1950, development in Ship Bottom continued to accelerate in the mid-twentieth century. In 1941, New Jersey Route S40 was extended from Manahawkin to Ship Bottom using the existing causeway, and in the 1950s the route was improved and renumbered Route 72 (Spicer-McGarry, 2018; Ship Bottom, 2023; U.S. Life Saving Service, 2023; Long Beach Island, 2023).

Significance: The residence at 305 Ocean Avenue is associated with late-twentieth-century development in Ship Bottom Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The building at 135 East 27th Street is a one-and-one-half-story modified Craftsman-style bungalow resting on a raised concrete basement. The (southwest) façade features an integral porch with vinyl banisters accessed by wood steps. The porch is sheltered by the upper half story supported by square wood piers. The porch wall features a door set in a square wood surround and a window with wood shutters. The porch and northwest elevation features cedar shake siding and fenestration consisting of 6/6, double-hung metal windows that appear to have false muntins set in simple wood surrounds. A pair of tall casement windows are located on the facade south of the porch where the house has clapboard siding. The upper half-story is characterized by a rambling Dutch gable roof with clipped gables, flat walls, and a flat dormer on the northwest slope. The gables and dormer are clad in scalloped shingles and feature small, side-by-side, sliding windows. A pair of casement windows on the upper story match those on the first. The roof is clad in asphalt shingles.

Interior Description: N/A

Setting: The building 135 East 27th Street is a beachfront property. Adjacent to the property is direct beach access. It is located down a narrow street in a residential area. Within this neighborhood is the headquarters building for the Ship Bottom Beach Patrol. Historic aerial imagery shows development in Ship Bottom throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with the entire area completely built-out by the 1970s. Today, Ship Bottom remains a popular summer destination, with a year-round population of 1,156 counted in the 2010 census and a summer population of approximately 20,000 (Ship Bottom, 2023).

Exterior Description: The building at 2601 Ocean Avenue is a two-story house clad in cedar shakes featuring a split-level façade with a rounded projection and set upon a raised concrete basement. Fenestration consists primarily of pairs of vinyl 1/1, double-hung windows, with some fixed-sash and side-by-side, sliding-sash windows. The basement level features an overhead garage door on the southwest elevation. The first story of the façade features a patio constructed of vinyl planks with faux wood grain and a vinyl railing. There are two pairs of French doors and windows wrap the south corner of the house. The first story is rounded at the north corner and is accessed by a set of stairs beneath a cantilevered portion of the second story. The second story of the façade projects slightly over the first as a split-level, and features windows that wrap the south corner and a pair of small side-by-side, sliding-sash windows. The building terminates with a patio roof with a vinyl railing. The eastern corner of the house is characterized by a rounded bay with rows of seven vinyl windows in a wood surround.

Exterior Description: The building at 126 East 7th Street is a two-story side-gabled house clad in wood shingles with a two-tier wraparound porch. The (northeast) façade features a central door in a slightly projected wood surround flanked by single 1/1, double-hung vinyl windows with vinyl faux shutters. The side elevations feature similar windows of varying sizes, either single or paired. Two first-story windows on the northwest elevation have canvas awnings. The second story of the façade features a central door in a slightly projected wood surround flanked by fixed windows divided into quadrants by vinyl muntins, set in vinyl surrounds, and with vinyl faux shutters. These windows are on the side elevations as well, in addition to single 1/1, double-hung vinyl windows. Vinyl octagonal vents are located at the tops of the gables. The two-story full-width porch is wrapped in vinyl and features composite decking. The gabled roof is clad in asphalt shingles.

Interior Description: N/A

Setting: The building at 126 East 7th Street is a residential property located adjacent to the beachfront and beach access over the dunes. It is in a residential neighborhood, just off Long Beach Boulevard. There are commercial businesses nearby, located mainly along Long Beach Boulevard. Historic aerial imagery shows development in Ship Bottom throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with the entire area completely built-out by the 1970s. Today, Ship Bottom remains a popular summer destination, with a year-round population of 1,156 counted in the 2010 census and a summer population of approximately 20,000 (Ship Bottom, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ship Bottom is a borough in Ocean County, NJ, located on the barrier island of Long Beach Island. As early as 1690, Euro-American settlers used Long Beach Island seasonally for fishing, whaling, gathering plants, and harvesting sea salt, but present-day Ship Bottom remained relatively undeveloped until the late nineteenth century. According to local history, Ship Bottom got its name in 1817 after a woman was rescued from the overturned hull of a wrecked ship. Starting in 1886 with the construction of the Long Beach Railroad, Ship Bottom served as the main access from the mainland to Long Beach Island. The Life Saving Station (originally established in 1855) and railroad brought increased development to Ship Bottom. In 1898, the home of Captain Wesley Treux became the first permanent dwelling in Ship Bottom, and in the following decades, additional cottages and resorts popped up (Long Beach Island, 2023; Ship Bottom, 2023).

In 1914, a wooden automobile causeway was built connecting the island to the mainland, which was met with great excitement and sparked rapid development in Ship Bottom and the rest of Long Beach Island in the subsequent decades. In 1925, Ship Bottom incorporated with the nearby towns of Bonnie Beach, Bonnet Beach, Edgewater Beach, and Beach Arlington into the borough of Ship Bottom-Arlington, later renamed Ship Bottom in 1947. Although the railroad bridge was washed out by a nor'easter in 1935 and subsequently abandoned, and the Life Saving Station was closed in 1949 or 1950, development in Ship Bottom continued to accelerate in the mid-twentieth century. In 1941, New Jersey Route S40 was extended from Manahawkin to Ship Bottom using the existing causeway, and in the 1950s the route was improved and renumbered Route 72 (Spicer-McGarry, 2018; Ship Bottom, 2023; U.S. Life Saving Service, 2023; Long Beach Island, 2023).

Significance: The building at 126 East 7th Street is associated with mid-twentieth-century development in Ship Bottom Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Finish Materials <u>Vinyl Siding</u>	

Exterior Description: The property at 1307 Ocean Avenue is a two-story split-level house clad in vinyl. The (southeast) façade has a two-story full-width porch. The fenestration is nearly identical on both stories. The façade features three pairs of sliding doors, and pairs of vinyl 1/1, double-hung windows on the side elevations. A small circular window is located between entrances on the first story. The two-story porch is constructed of wood planks, posts, and railings. A metal spiral staircase provides access from the second-story porch to a rooftop patio with wood railings. The side-gabled roof is clad in asphalt shingles.

Interior Description: N/A

Setting: The property at 1307 Ocean Avenue is a residential beachfront property. Just down the street from the property is direct beach access over the dunes on a sandy path. It is located on a narrow street in a residential neighborhood. Historic aerial imagery shows development in Ship Bottom throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with the entire area completely built-out by the 1970s. Today, Ship Bottom remains a popular summer destination, with a year-round population of 1,156 counted in the 2010 census and a summer population of approximately 20,000 (Ship Bottom, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ship Bottom is a borough in Ocean County, NJ, located on the barrier island of Long Beach Island. As early as 1690, Euro-American settlers used Long Beach Island seasonally for fishing, whaling, gathering plants, and harvesting sea salt, but present-day Ship Bottom remained relatively undeveloped until the late nineteenth century. According to local history, Ship Bottom got its name in 1817 after a woman was rescued from the overturned hull of a wrecked ship. Starting in 1886 with the construction of the Long Beach Railroad, Ship Bottom served as the main access from the mainland to Long Beach Island. The Life Saving Station (originally established in 1855) and railroad brought increased development to Ship Bottom. In 1898, the home of Captain Wesley Treux became the first permanent dwelling in Ship Bottom, and in the following decades, additional cottages and resorts popped up (Long Beach Island, 2023; Ship Bottom, 2023).

In 1914, a wooden automobile causeway was built connecting the island to the mainland, which was met with great excitement and sparked rapid development in Ship Bottom and the rest of Long Beach Island in the subsequent decades. In 1925, Ship Bottom incorporated with the nearby towns of Bonnie Beach, Bonnet Beach, Edgewater Beach, and Beach Arlington into the borough of Ship Bottom-Arlington, later renamed Ship Bottom in 1947. Although the railroad bridge was washed out by a nor'easter in 1935 and subsequently abandoned, and the Life Saving Station was closed in 1949 or 1950, development in Ship Bottom continued to accelerate in the mid-twentieth century. In 1941, New Jersey Route S40 was extended from Manahawkin to Ship Bottom using the existing causeway, and in the 1950s the route was improved and renumbered Route 72 (Spicer-McGarry, 2018; Ship Bottom, 2023; U.S. Life Saving Service, 2023; Long Beach Island, 2023).

Significance: The property at 1307 Ocean Avenue is associated with late-twentieth-century development in Ship Bottom Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 1307 Ocean Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 1307 Ocean Avenue is recommended Not Eligible for inclusion in the NRHP.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The borough of Stone Harbor is in the extreme southern section of Seven Mile Island in Cape May County. The first Euro-American settlement dates to 1722 when the barrier island was purchased by Aaron Leaming who used it for logging juniper and housing livestock. The island was purchased by the Seven Mile Beach Company in 1887 with the intention of creating a beach resort. In 1892, the Abbotsford Inn was constructed. The five-story hotel was the first residential building constructed in Stone Harbor and was quickly followed by the construction of seven individual “cottages” between present-day 80th and 83rd Streets. In 1907 the dunes surrounding the nascent settlement of Stone Harbor were graded, marshes were filled in, and a network of streets were paved to accommodate more development. Rapid development was spurred further by the arrival of a rail line connecting Cape May Courthouse to Stone Harbor in 1912, and shortly after a roadway and bridge at present-day 96th Street opened, allowing vehicular traffic from the mainland. Stone Harbor was officially incorporated in 1914 and a boardwalk, theatre, and fishing pier were constructed (VisitNJShore.com, 2023; Sanborn, 1909; Shore Blog, 2021).

Significance: Women’s Civic Club of Stone Harbor is associated with mid-twentieth-century development in Stone Harbor. The building is not representative of a significant architectural style or type and is not architecturally significant.

It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 100 114th Street is recommended Not Eligible for inclusion in the NRHP.

Type:	N/A	Bays:	2
Roof Finish Materials:	Unknown		
Exterior Finish Materials	Asbestos Siding		

Exterior Description: The building at 2 102nd Street is a two-story flat-roof house one-to-two bays wide and four-to-five bays deep. The fenestration is 1/1 replacement sash and picture windows with three-part horizontal divisions. An integrated awning projects from the façade and extends to the side elevations. The exterior wall cladding is asbestos shingle siding. There is a second-floor balcony on one side elevation. The detached garage is two stories with a flat roof, asbestos siding, and a single 1/1 sash.

Interior Description: N/A

Setting: The resource is in a residential neighborhood adjacent to Stone Harbor Beach. Historic aerial photography shows Stone Harbor developing primarily within the grid of streets between 111th Street and 83rd Street in 1920, and dense development similar to today's configuration in place by 1956. By 1970, development between Avalon and Stone Harbor was complete, with the grid of streets appearing to be in the same configuration as today (NETR 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The borough of Stone Harbor is in the extreme southern section of Seven Mile Island in Cape May County. The first Euro-American settlement dates to 1722 when the barrier island was purchased by Aaron Leaming who used it for logging juniper and housing livestock. The island was purchased by the Seven Mile Beach Company in 1887 with the intention of creating a beach resort. In 1892, the Abbotsford Inn was constructed. The five-story hotel was the first residential building constructed in Stone Harbor and was quickly followed by the construction of seven individual “cottages” between present-day 80th and 83rd Streets. In 1907 the dunes surrounding the nascent settlement of Stone Harbor were graded, marshes were filled in, and a network of streets were paved to accommodate more development. Rapid development was spurred further by the arrival of a rail line connecting Cape May Courthouse to Stone Harbor in 1912, and shortly after a roadway and bridge at present-day 96th Street opened, allowing vehicular traffic from the mainland. Stone Harbor was officially incorporated in 1914 and a boardwalk, theatre, and fishing pier were constructed (VisitNJShore.com, 2023; Sanborn, 1909; Shore Blog, 2021).

Significance: 2 102nd Street is associated with mid-twentieth-century development in Stone Harbor. The building is not representative of a significant architectural style or type and is not architecturally significant.

Roof Finish Materials: Asphalt Shingle

Exterior Finish Materials: Asbestos Siding

Exterior Description: The building at 601 North Ocean Avenue is a one-and-one-half-story Cape Cod with asbestos siding and a wooden deck. The beach-facing elevation is three bays with a central entrance. The entry is flanked by a picture window and a pair of 1/1 replacement sash. The side elevations are two bays with 1/1 replacement sash. A small 1/1 sash is located in the gable and a shed roof dormer on the rear elevation provides light to the interior of the half-story.

Interior Description: N/A

Setting: The building at 601 North Ocean Avenue is an oceanfront property surrounded by like buildings with direct beach access. Historic aerial imagery shows development in Surf City throughout the first half and middle of the twentieth century, starting primarily in the 1930s and culminating with the entire area completely built-out by the 1970s. Today, most of the borough consists of private developments and enclaves. The borough is a popular summer destination.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Surf City is a borough in Ocean County located on the barrier island of Long Beach Island. Present-day Surf City is the location of the first Euro-American settlement on Long Beach Island in the eighteenth century, a whaling settlement known as Great Swamp. The area was also home to one of the first major hotels on Long Beach Island, the Mansion of Health which was built in 1822. The hotel attracted summer visitors but development in the area remained limited throughout most of the nineteenth century. The community of Long Beach City was established in 1873. In 1886, the area became accessible directly by railroad with the construction of the Long Beach Railroad, stimulating growth and development. The borough was incorporated in 1894 and renamed Surf City in 1899 to prevent confusion with other municipalities with similar names. In 1914, Surf City became accessible by automobile with the construction of a causeway over Barnegat Bay and a boulevard across the island. The construction of the Garden State Parkway in 1955 spurred additional development to accommodate more visitors (Heritage Studies, Inc., 1981; Long Beach Island, 2023; Lloyd, 1994; Snyder, 2004; Spicer-McGarry, 2018).

Significance: 601 North Ocean Avenue is associated with mid-twentieth-century development in Upper Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Form: Ranch **Stories:** 1

Type: N/A **Bays:** 2

Roof Finish Materials: Asphalt Shingle

Exterior Finish Materials Wood, Other

Exterior Description: The building at 30 East Seacliff Avenue is a one-story ranch house with a two-bay garage. The house is set back from the road with heavy tree cover. The building is constructed on a rectangular with a wide and shallow pitched roof. The exterior wall cladding appears to be T111. Visible fenestration appears to be casement sash and a paired fixed sash with awning sash below. The entrance is not observable from the public right of way.

Interior Description: N/A

Setting: The building at 30 East Seacliff Avenue is in a residential neighborhood located right along the shoreline. The township consists of several unincorporated communities, including Beesleys Point, Marmora, Palermo, Seaville, Greenfield, Petersburg, Tuckahoe, Marshallville, Steelmantown, and Strathmere. Most of the township is on the mainland, except for Strathmere, which is located on the barrier island of Ludlam Island. Upper Township remains predominantly comprised of small communities with a lot of undeveloped land, including the Tuckahoe Wildlife Management Area in the northeast part of the township.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Upper Township is the northernmost township in Cape May County. One of the original New Jersey townships, Upper Township was incorporated in 1798. For much of the nineteenth century, it was predominantly a fishing, oystering, and farming community and overall had limited development. By the late-nineteenth century, the West Jersey Railroad connected the villages of Tuckahoe, Petersburg, and Seaville. As seaside resorts on the neighboring barrier islands became more popular in the early twentieth century, some villages in Upper Township became popular stops for automobile traffic along the way. General stores and gas stations flourished in villages like Beesley's Point, Marmora, and Palermo. In 1926, a bridge was built connecting Tuckahoe to Corbin City across the Tuckahoe River, and in 1928 the Beesley's Point Bridge was built across Great Egg Harbor. These bridges made Upper Township more accessible from the north and stimulated growth as developers bought more land and built homes and businesses. The construction of the Garden State Parkway through the eastern part of Upper Township in 1954 allowed summer tourists to bypass the communities in the township on their way to the seaside resorts, reducing business in the gas stations and general stores throughout the township (Holden, 2020; Rand McNally, 1897; Upper Township, 2023).

Significance: 30 East Seacliff Avenue is associated with mid-twentieth-century development in Upper Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 30 East Seacliff Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 30 East Seacliff Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 1 East Seaview Avenue is a two-and-one-half-story elevated gable-front house, with the first story being the garage. The house is two bays on the street-facing elevation with the right bay projected. The gabled roof of the main block has wide shed-roof dorms on either side of the roof. The roof eaves feature exposed rafter tails on the main block, projection, and dormers. The side elevations are three bays. There is a hipped roof porch with exposed rafter tails and square supports located one the second story of one of the side elevations. Though open, the interior of the porch is obscured by fabric awnings so it is unclear if this is the location of the building entrance. Two flights of wooden steps provide exterior access to the porch. The fenestration overall is 1/1 replacement sash either singly, in pairs, or grouped in threes. The first story is parged masonry.

Interior Description: N/A

Exterior Finish Materials	Brick		

Exterior Description: The building at 5200 Boardwalk is a circa 1974 high-rise apartment building located directly on the Ventnor City boardwalk and facing the Atlantic Ocean. The building has a rectangular footprint and consists of an eighteen-story tower rising above a one-to-two-story plinth containing vehicle parking, a primary entrance at grade on the southwest elevation, and a swimming pool at the upper deck of the plinth on the beach-facing southeast elevation. The upper floors have brick curtain walls with concrete belt courses at each floor and are characterized by repetitive bays of projecting concrete balconies with sliding glass doors and window bays with aluminum 1/1 windows and louvered aluminum spandrels.

Interior Description: N/A

Setting: The building at 5200 Boardwalk is in a beachfront residential area surrounded by detached and multi-unit residential development of the early twentieth through the early twenty-first centuries. The building is one half block southeast of Atlantic Avenue, which forms one of Ventnor City's main thoroughfares. 5200 Boardwalk has direct beach access across the Ventnor City boardwalk. Historic aerial imagery shows the southern part of Ventnor City fully developed by 1920, with development north of the Inside Thorofare through the first half of the twentieth century, culminating in the present-day level of development by the 1960s. Today, portions of the northern part of the city remain undeveloped marshland, and the rest of the city mainly consists of private developments and enclaves. Ventnor City remains a popular summer resort (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ventnor City is in Atlantic County and is situated on Absecon Island south of Atlantic City and north of Margate. Ventnor City remained undeveloped hills and meadows through most of the nineteenth century, even while Atlantic City and South Atlantic City (present-day Margate) grew and developed in the mid- and late-nineteenth century. In 1881, the Camden and Atlantic Railroad connected Atlantic City to Margate through Ventnor, requiring the grading of many of the hills in the area. In 1888, the Camden and Atlantic Land Company built a train station in Ventnor City, providing direct passenger access to the area for the first time. The land company subsequently built three cottages. The name "Ventnor" was chosen in 1889, referencing the seaside resort in Ventnor, England (Smith, 1963).

By the turn of the twentieth century, the lowland marshes in Ventnor were filled, and Ventnor had several houses, a post office, and a few additional buildings. In 1900, the county built the Longport Speedway, a gravel road connecting Atlantic City to Longport through Ventnor. Ventnor City was officially incorporated in 1903. Following incorporation, the city continued to develop, adding additional houses, bath houses, a newspaper, a boat works, a pharmacy, and a boardwalk over the next decade. The twentieth century saw increased development, solidifying Ventnor City as a popular summer resort (Smith, 1963; Ventnor City, 2022).

5600 Boardwalk was completed in 1974 and is one of a handful of high-rise condominiums in an area that was densely developed in the early twentieth century as an upscale beach cottage community.

Significance: The building at 5600 Boardwalk is associated with late-twentieth-century development in Ventnor City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Type:	N/A	Bays:	2
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Asbestos Siding		

Exterior Description: The building at 110 South Amherst Avenue is a two-and-one-half-story, circa 1913 Dutch Colonial Revival residence with a cross-gambrel roof and a full-width porch with stone piers and paired and triple square columns. A partially below-grade garage is attached to the northwest elevation and the roof of the garage forms an extension of the entry porch. The building has an asphalt shingle roof, asbestos siding, and vinyl windows with simulated divided lights.

Interior Description: N/A

Setting: The building at 110 South Amherst Avenue is in a beachfront residential area surrounded by detached and multi-unit development of the early twentieth through the early twenty-first centuries. This block of South Amherst Avenue is a relatively intact collection of early-twentieth-century upscale beach cottages rendered in various popular styles of the period. The building is one-half block southeast of Atlantic Avenue, which forms one of Ventnor City's main thoroughfares. Public beach access is available across the Ventnor City boardwalk. Historic aerial imagery shows the southern part of Ventnor City fully developed by 1920, with development north of the Inside Thorofare through the first half of the twentieth century, culminating in the present-day level of development by the 1960s. Today, portions of the northern part of the city remain undeveloped marshland, and the rest of the city mainly consists of private developments and enclaves. Ventnor City remains a popular summer resort (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ventnor City is in Atlantic County and is situated on Absecon Island south of Atlantic City and north of Margate. Ventnor City remained undeveloped hills and meadows through most of the nineteenth century, even while Atlantic City and South Atlantic City (present-day Margate) grew and developed in the mid- and late-nineteenth century. In 1881, the Camden and Atlantic Railroad connected Atlantic City to Margate through Ventnor, requiring the grading of many of the hills in the area. In 1888, the Camden and Atlantic Land Company built a train station in Ventnor City, providing direct passenger access to the area for the first time. The land company subsequently built three cottages. The name "Ventnor" was chosen in 1889, referencing the seaside resort in Ventnor, England (Smith, 1963).

By the turn of the twentieth century, the lowland marshes in Ventnor were filled, and Ventnor had several houses, a post office, and a few additional buildings. In 1900, the county built the Longport Speedway, a gravel road connecting Atlantic City to Longport through Ventnor. Ventnor City was officially incorporated in 1903. Following incorporation, the city continued to develop, adding additional houses, bath houses, a newspaper, a boat works, a pharmacy, and a boardwalk over the next decade. The twentieth century saw increased development, solidifying Ventnor City as a popular summer resort (Smith, 1963; Ventnor City, 2022).

The building at 110 South Amherst Avenue was completed in about 1913 as part of a development of upscale beachfront cottages.

Significance: The building at 110 South Amherst Avenue is associated with early-twentieth-century development in Ventnor City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 110 South Amherst Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 110 South Amherst Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 6003 Boardwalk is a two-and-one-half-story, circa 1920, Tudor Revival residence located on the Ventnor City boardwalk with its primary elevation facing the boardwalk and the beach beyond. The house has wood clapboard siding on the first story and stucco siding above with half-timbering detail. Windows throughout are non-historic vinyl casement sash. The hipped roof and multiple gabled dormers are clad in red terra cotta tile, with exposed rafter tails and brackets. A full width porch on the building's primary (southeast) elevation features paired, bracketed square posts. An outdoor in-ground pool is present between the building and the boardwalk.

Interior Description: N/A

Setting: The building at 6003 Boardwalk is directly across the Ventnor City boardwalk from the beach in a residential area surrounded by detached and multi-unit residential development of the early twentieth through the early twenty-first centuries. The block formed by the Boardwalk, south Derby Avenue, Cornwall Avenue, and Atlantic Avenue is characterized by highly altered early-twentieth-century upscale beach cottages rendered in various popular styles of the period. The building is one-half block southeast of Atlantic Avenue, which forms one of Ventnor City's main thoroughfares. Public beach access is available across the Ventnor City boardwalk. Historic aerial imagery shows the southern part of Ventnor City fully developed by 1920, with development north of the Inside Thorofare through the first half of the twentieth century, culminating in the present-day level of development by the 1960s. ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ventnor City is in Atlantic County and is situated on Absecon Island south of Atlantic City and north of Margate. Ventnor City remained undeveloped hills and meadows through most of the nineteenth century, even while Atlantic City and South Atlantic City (present-day Margate) grew and developed in the mid- and late-nineteenth century. In 1881, the Camden and Atlantic Railroad connected Atlantic City to Margate through Ventnor, requiring the grading of many of the hills in the area. In 1888, the Camden and Atlantic Land Company built a train station in Ventnor City, providing direct passenger access to the area for the first time. The land company subsequently built three cottages. The name "Ventnor" was chosen in 1889, referencing the seaside resort in Ventnor, England (Smith, 1963).

By the turn of the twentieth century, the lowland marshes in Ventnor were filled, and Ventnor had several houses, a post office, and a few additional buildings. In 1900, the county built the Longport Speedway, a gravel road connecting Atlantic City to Longport through Ventnor. Ventnor City was officially incorporated in 1903. Following incorporation, the city continued to develop, adding additional houses, bath houses, a newspaper, a boat works, a pharmacy, and a boardwalk over the next decade. The twentieth century saw increased development, solidifying Ventnor City as a popular summer resort (Smith, 1963; Ventnor City, 2022).

The building at 6003 Boardwalk was completed in about 1920 as part of a development of upscale beachfront houses. A circa 1920s postcard shows that the half-timbering pattern in the gable ends has been altered, and available imagery online shows that little or no historic fabric remains on the interior (Smith, 2018).

Significance: The building at 6003 Boardwalk is associated with early-twentieth-century development in Ventnor City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The building at 110 South Philadelphia Avenue is a three-story, circa 1980 Modern residence sited one lot from the Ventnor City boardwalk. The building has complex massing, a flat roof and rooftop deck, vertical wood siding, and multiple upper-story balconies. The elevations are arranged asymmetrically, with single-light casement windows in singles, pairs, and gangs of four. The primary entrance is set within a shallow inset on the northeast elevation. An inset garage is located on the northwest elevation.

Interior Description: N/A

Setting: The building at 110 South Philadelphia Avenue is set back from the sidewalk at its northeast elevation by a landscaped area and low retaining wall. Both fencing and retaining walls on the site employ the same vertical wood siding material as the house, and there is a wood gate over the entrance to the driveway off South Philadelphia Avenue. The building at 110 South Philadelphia Avenue is in a beachfront residential area surrounded by detached and multi-unit residential development of the early twentieth through the early twenty-first centuries. The building is located directly on the beach and set back approximately 120 feet from the Ventnor City boardwalk. The building is one-half block southeast of Atlantic Avenue, which forms one of Ventnor City's main thoroughfares. Public beach access is available across the Ventnor City boardwalk. Historic aerial imagery shows the southern part of Ventnor City fully developed by 1920, with development north of the Inside Thorofare through the first half of the twentieth century, culminating in the present-day level of development by the 1960s. Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 108 South Little Rock Avenue is a circa 1890 three-story residence atop a raised basement. The exterior is clad in vinyl. A low, pyramidal roof with overhanging eaves is clad in asphalt shingle. A wraparound first-story porch features fluted Doric columns and non-historic wood and metal railings. The porch is accessed via a brick stoop. A single-bay auto garage is attached at the southeast elevation. Non-historic wood stairs provide fire egress from the second and third stories. A non-historic railing has been added above the porch to create a second-floor balcony.

Interior Description: N/A

Setting: The building at 108 South Little Rock Avenue is in a beachfront residential area surrounded by detached and multi-unit development of the early twentieth through the early twenty-first centuries. It is nearly identical in form to its immediate neighbors to the northwest and southeast, although all three buildings have had significant alterations. Surrounding blocks are characterized by highly altered late-nineteenth-century cottages and condominiums dating from the mid-twentieth century through the early twenty-first century. The building is one-half block southeast of Atlantic Avenue, which forms one of Ventnor City's main thoroughfares. Public beach access is available across the Ventnor City boardwalk which is roughly 230 feet to the southeast. Historic aerial imagery shows the southern part of Ventnor City fully developed by 1920, with development north of the Inside Thorofare through the first half of the twentieth century, culminating in the present-day level of development by the 1960s. Today, portions of the northern part of the city remain undeveloped marshland, and the rest of the city mainly consists of private developments and enclaves. Ventnor City remains a popular summer resort (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ventnor City is in Atlantic County and is situated on Absecon Island south of Atlantic City and north of Margate. Ventnor City remained undeveloped hills and meadows through most of the nineteenth century, even while Atlantic City and South Atlantic City (present-day Margate) grew and developed in the mid- and late-nineteenth century. In 1881, the Camden and Atlantic Railroad connected Atlantic City to Margate through Ventnor, requiring the grading of many of the hills in the area. In 1888, the Camden and Atlantic Land Company built a train station in Ventnor City, providing direct passenger access to the area for the first time. The land company subsequently built three cottages. The name "Ventnor" was chosen in 1889, referencing the seaside resort in Ventnor, England (Smith, 1963).

By the turn of the twentieth century, the lowland marshes in Ventnor were filled, and Ventnor had several houses, a post office, and a few additional buildings. In 1900, the county built the Longport Speedway, a gravel road connecting Atlantic City to Longport through Ventnor. Ventnor City was officially incorporated in 1903. Following incorporation, the city continued to develop, adding additional houses, bath houses, a newspaper, a boat works, a pharmacy, and a boardwalk over the next decade. The twentieth century saw increased development, solidifying Ventnor City as a popular summer resort (Smith, 1963; Ventnor City, 2022).

The building at 108 South Little Rock Avenue was completed in about 1890 as part of a seaside cottage development.

Significance: The building at 108 South Little Rock Avenue is associated with late-nineteenth-century development in Ventnor City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 108 South Little Rock Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 108 South Little Rock Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 5515 Atlantic Avenue is a two-story, circa 1920, Dutch Colonial Revival residence with a rectangular footprint and multiple gambrel roofs clad in asphalt shingle. The exterior is clad in wood shingles at the upper stories, with shaped wood shingles in the gable ends, and rests atop a raised brick foundation. A full-width inset porch on the building's primary (southeast) elevation features shingle-clad piers and a non-historic metal railing. Above the porch at the second story is a bracketed bay window. The building's northeast and southwest elevations feature a cross-gambrel roof and shed dormers. A secondary entrance accessed via a small deck is located on the southwest. The fenestration generally consists of 1/1 vinyl windows, with fanlights in the gable ends. A detached single-bay garage with wood shingle siding and a pyramidal roof clad in asphalt shingle is located to the northwest.

Interior Description: N/A

Setting: The building at 5515 Atlantic Avenue occupies a corner lot one block inland from the beach in a residential area surrounded by detached and multi-unit development of the early twentieth through the early twenty-first centuries. The surrounding blocks are characterized by relatively intact early-twentieth-century upscale beach cottages rendered in various popular styles of the period. In general, these residences are uniformly set back from the sidewalk and street on narrow lots with grass lawns and landscaped vegetation. Atlantic Avenue forms one of Ventnor City's main thoroughfares. Historic aerial imagery shows the southern part of Ventnor City fully developed by 1920, with development north of the Inside Thorofare through the first half of the twentieth century, culminating in the present-day level of development by the 1960s. Today, portions of the northern part of the city remain undeveloped marshland, and the rest of the city mainly consists of private developments and enclaves. Ventnor City remains a popular summer resort (NETR, 2023).

Exterior Description: The building at 111 South Surrey Avenue (The Breakers Condominium) is a four-story, circa-1964 concrete framed condominium building (multi-unit) with an L-shaped plan surrounding an in-ground outdoor swimming pool atop a raised plinth. The building consists of two to three floors of residential units along with an open-air parking garage (at grade below the upper floors on the northwest end of the building) and a single-story addition containing a lobby. The exteriors are clad in stucco and the beach-facing elevations have continuous balconies supported on concrete beams. Each structural bay typically contains a large tripartite window and a door on the beach-facing elevations, with large windows and louvered vents on the secondary elevations.

Interior Description: N/A

Setting: The building at 111 South Surrey Avenue is located directly on the Ventnor City boardwalk in a beachfront residential area surrounded by detached and multi-unit development of the early twentieth through the early twenty-first centuries. The building is surrounded by paved parking and sidewalks on three sides. It is one-half block southeast of Atlantic Avenue, which forms one of Ventnor City's main thoroughfares. Public beach access is available across the Ventnor City boardwalk. Historic aerial imagery shows the southern part of Ventnor City fully developed by 1920, with development north of the Inside Thorofare through the first half of the twentieth century, culminating in the present-day level of development by the 1960s. The twentieth century saw increased development, solidifying Ventnor City as a popular summer resort (Smith, 1963; Ventnor City, 2022).

The building at 110 South Harvard Avenue was completed in about 1910 as part of a development of upscale beachfront cottages.

Significance: The building at 110 South Harvard Avenue is associated with early-twentieth-century development in Ventnor City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 110 South Harvard Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 110 South Harvard Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 104 South Wissahickon Avenue is a two-story Spanish Colonial Revival dwelling with a rectangular footprint and stucco siding atop a raised basement. The building has a hipped roof clad in asphalt shingle with a hipped dormer on the primary (northeast) elevation. A hipped-roofed entry portico on the southeast elevation has glazed tile roofing. Window openings on the primary elevation are arched and a pair of historic leaded glass arched windows are extant at the second floor. The remaining windows throughout are vinyl sash with simulated divided lights. A single-story sunroom on the primary elevation is topped with a second-floor balcony featuring wrought-iron railings matching applied wrought-iron details below windows on the primary elevation. A single-bay garage has a hipped roof with glazed tile roofing, a hipped dormer, and stucco siding.

Interior Description: N/A

Setting: The building at 104 South Wissahickon Avenue is in a beachfront residential area surrounded by detached and multi-unit development of the early twentieth through the early twenty-first centuries. The building is one-half block southeast of Atlantic Avenue, which forms one of Ventnor City's main thoroughfares. Public beach access is available across the Ventnor City boardwalk. Historic aerial imagery shows the southern part of Ventnor City fully developed by 1920, with development north of the Inside Thorofare through the first half of the twentieth century, culminating in the present-day level of development by the 1960s. Today, portions of the northern part of the city remain undeveloped marshland, and the rest of the city mainly consists of private developments and enclaves. Ventnor City remains a popular summer resort (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ventnor City is in Atlantic County and is situated on Absecon Island south of Atlantic City and north of Margate. Ventnor City remained undeveloped hills and meadows through most of the nineteenth century, even while Atlantic City and South Atlantic City (present-day Margate) grew and developed in the mid- and late-nineteenth century. In 1881, the Camden and Atlantic Railroad connected Atlantic City to Margate through Ventnor, requiring the grading of many of the hills in the area. In 1888, the Camden and Atlantic Land Company built a train station in Ventnor City, providing direct passenger access to the area for the first time. The land company subsequently built three cottages. The name "Ventnor" was chosen in 1889, referencing the seaside resort in Ventnor, England (Smith, 1963).

By the turn of the twentieth century, the lowland marshes in Ventnor were filled, and Ventnor had several houses, a post office, and a few additional buildings. In 1900, the county built the Longport Speedway, a gravel road connecting Atlantic City to Longport through Ventnor. Ventnor City was officially incorporated in 1903. Following incorporation, the city continued to develop, adding additional houses, bath houses, a newspaper, a boat works, a pharmacy, and a boardwalk over the next decade. The twentieth century saw increased development, solidifying Ventnor City as a popular summer resort (Smith, 1963; Ventnor City, 2022).

The building at 104 South Wissahickon Avenue was completed in about 1912 as part of a development of upscale beachfront cottages

Significance: The building at 104 South Wissahickon Avenue is associated with early-twentieth-century development in Ventnor City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The building at 5301 Atlantic Avenue is a circa-1930 three-story brick-clad Colonial Revival commercial-residential building on a corner lot with storefronts at the first story and apartments on the upper stories. The building has a flat roof with a brick parapet above a deep cornice. Fenestration consists of a mix of historic wood windows at the upper stories with some vinyl replacement windows, along with large fixed-sash storefront windows at the first story. Semi-hexagonal bays at the northeast, southeast, and southwest elevations of the upper stories are clad in painted sheet metal and contain single or paired center windows flanked by narrower windows. The storefronts have been altered with modern doors and non-historic siding materials in most cases. A chamfered corner entrance is located at the first story. The northwest (rear) elevation has non-historic wood stairs and narrow porches serving the upper-floor apartments.

Interior Description: N/A

Setting: The building at 5301 Atlantic Avenue occupies a corner lot one block inland from the beach in a mixed residential-commercial area surrounded by multistory commercial buildings and residential development of the early twentieth through the early twenty-first centuries. Atlantic Avenue forms one of Ventnor City's main thoroughfares. Historic aerial imagery shows the southern part of Ventnor City fully developed by 1920, with development north of the Inside Thorofare through the first half of the twentieth century, culminating in the present-day level of development by the 1960s. Exterior Description: The building at 9000A Beach Avenue is a three-story condominium building with a gabled roof. The building is six bays on the beach-facing elevation and six bays on the side elevations. The complete first story is a parking garage with open bays facing the ocean and clad on the inside with rustic stone. Balconies on the second and third floors are separated by shed-roof projects that appear to be stair towers. Each tower has a pedestrian door on each level and an ocular window on the second and third stories. In addition to the towers, each balcony has a pedestrian door and a sliding patio door leading from each unit. Set back from each tower is a wide chimney stack. Overall, the building is clad in vinyl siding and shingles. The fenestration on the side elevations is fixed, casement, and sliders arranged in bays. Balconettes occupy the bays closest to the rear elevation.

Interior Description: N/A

Setting: The building at 9000A Beach Avenue is an oceanfront property in a residential/resort area with sidewalks located along the shore. The Wildwood Boardwalk and the amusement piers to the northeast do not extend to this section of the beach front which is populated by condominiums and hotels located directly on the shore with immediate beach access.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Wildwood Crest is in the southern portion of Five Mile Beach, a barrier island located in southern Cape May County. Development first occurred in the mid-to-late-nineteenth century as fishermen and their families constructed permanent residences and buildings in the northern portion of the barrier island in Angelsea (North Wildwood). In 1879, Frederick Swope purchased land on the island as a real estate venture, eventually forming the Angelsea Improvement Company and constructing both summer cottages and a railway spur to the island. Development to the south of Angelsea, near the middle of the barrier island, began shortly after with the Holly Beach Improvement Company. Development to the north of Holly Beach began in 1883 by the Wild-Wood Improvement Company. Wild-Wood eventually turned attention to the southern portion of the barrier island, spurred by improved transportation routes to the area, and constructed the first houses in what was touted as Wildwood Crest in 1906. While rudimentary boardwalks connecting hotels, businesses, and residences were constructed within the early developments on the island, a cohesive boardwalk running along the coast from North Wildwood to Wildwood Crest was constructed in the early twentieth century. This in turn spurred more development, as restaurants, bandstands, and amusement rides catered to an expanding tourist population. However, it was not until post-World War II, when the Garden State Parkway opened in 1955, that a major building boom occurred in Wildwood Crest. The Garden State Parkway allowed for easy automobile travel to Wildwood Crest and a booming tourist vacation industry arose. Over 200 motels were constructed within the decade alone. Most of these motels were constructed in the “Doo Wop” or Googie architectural style that expressed modern space-age elements popular in American culture at that time. The Wildwoods became known as the “Doo Wop Capital of the World.” To this day, Wildwood Crest and Wildwood host the largest concentration of “Doo Wop” resort architecture in the United States (The Shore Blog, 2021; Zerbe et al., 2004).

Significance: 9000A Beach Avenue is associated with late-twentieth-century development in Wildwood Crest. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 9000A Beach Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 9000A Beach Avenue is recommended Not Eligible for inclusion in the NRHP.

Description: Today known as Harbor Crossings, Pleasantville Mobile Home Court is a manufactured home community. The land is owned by a management company that sells and finances manufactured homes. Homeowners then pay a monthly fee for services. The private community is bounded by Tilton Road, Fire Road, Old Egg Harbor Road, Black Horse Pike, and the Garden State Parkway. It comprises a series of private streets that span the development on north-south and east-west axes. According to historic aerials, the development dates to the early 1950s but takes its current form by the early 1980s. The owner-occupied manufactured homes are typically one-story gabled rectangular buildings with vinyl siding and an entry on the long elevation. Dates of construction appear to be largely late twentieth century with early twenty-first century buildings interspersed.

Setting: Egg Harbor Township is in the southeastern extent of Atlantic County and is bordered on the southwest by the Great Egg Harbor River. The township consists of several unincorporated communities, including Bargaintown, Cardiff, English Creek, Farmington, Scullville (formerly known as Jeffers), Steelmanville, and West Atlantic City, as well as part of McKee City. Historic aerial imagery shows the slow growth of the township through the mid-twentieth century, including the construction of the Naval Air Station (NAS) Atlantic City in the 1940s, the construction of the Atlantic City Expressway in the 1960s, and the expansion of suburbs throughout the township in the mid- and late-twentieth century. Today, Egg Harbor Township remains primarily agricultural land, with small centers of commerce in the communities and additional undeveloped natural areas used for recreation (NETR, 2023).

Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Aluminum		

Exterior Description: The building at 111 Lanes Pond Road is a raised ranch set back from the road on a circular driveway. The primary elevation is sided with aluminum on the upper level and faced with multi-colored brick on the lower level. A roof extension on the front is supported by square wood columns that frame the asymmetrical bays. The left bay is the widest to accommodate a tripartite picture window, while the right two bays are evenly spaced with paired double-hung windows. The remaining bay is a slightly recessed entry, and the door framed is crowned with a broken pediment. The windows appear to be vinyl and have vinyl shutters.

Interior Description: N/A

Setting: Howell Township is in southern Monmouth County and comprises several unincorporated communities, including Ramtown, Adelphia, Ardena, Ardmore Estates, Bergerville, Candlewood, Collingwood Park, Fairfield, Fort Plains, Freewood Acres, Jerseyville, Lake Club, Land of Pines, Larrabees, Lippencotts Corner, Lower Squankum, Matthews, Maxim, Oak Glen, Parkway Pines, Salem Hill, Shacks Corner, Southard, Squankum, West Farms, Winston Park, Wyckoff Mills, and Yellow Brook. Historic aerial imagery shows the slow growth of the township through the mid-twentieth century, including the construction of the weapons station in the 1940s, the construction of I-195 in the 1970s, the establishment of the Manasquan Reservoir in the 1990s, and the expansion of suburbs throughout the township in the mid- and late-twentieth century. Lanes Pond Road is a secondary road lined with woods and fields, with dispersed residential properties in the vicinity of the resource.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The first Euro-American settlement in the area was a Methodist church society founded in the 1760s in present-day Adelphia. Several additional communities were established in the late eighteenth and early-nineteenth centuries with Howell Township formally incorporated in 1801. In the first half of the nineteenth century, Farmingdale (no longer part of Howell Township) was the commercial center of the township. Industries in the township during the nineteenth century included iron production, marl extraction, brick-making, and munition manufacturing. Through the twentieth century, the township remained relatively rural and agricultural. In 1903, Farmingdale was incorporated as a borough. In 1912, the Howell Preventorium was opened as a tuberculosis quarantine center for children and operated until about 1962. In 1943, the Naval Weapons Station Earle was commissioned in northern Howell Township to support the World War II effort. The weapons station still operates today. Most of the railroads in the township ceased operation in the twentieth century as many of the large industries from the nineteenth century declined. The mid- and late-twentieth century saw the improvement of road infrastructure and the growth of suburban developments in parts of the township. Today, Howell Township remains primarily agricultural, with small centers of commerce and additional undeveloped natural areas used for recreation.

Significance: 111 Lanes Pond Road is associated with mid-twentieth-century development in Howell Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Roof Finish Materials: Asphalt Shingle

Exterior Finish Materials Wood, Clapboard

Exterior Description: The building at 768 Oak Glen Road is a one-story side-gabled ranch house with clapboard siding and an oversized attached garage. The house is six bays wide with a center entry. To the left of the entry is a picture window. Both are shielded by a roof overhang supported by posts. The rest of the fenestration is 1/1 sash singly placed. The garage has a gable front that rises above the roofline of the house. There are two bays, one of which is within a projecting pedimented bay.

Interior Description: N/A

Setting: Howell Township is in southern Monmouth County and comprises several unincorporated communities, including Ramtown, Adelphia, Ardena, Ardmore Estates, Bergerville, Candlewood, Collingwood Park, Fairfield, Fort Plains, Freewood Acres, Jerseyville, Lake Club, Land of Pines, Larrabees, Lippencotts Corner, Lower Squankum, Matthews, Maxim, Oak Glen, Parkway Pines, Salem Hill, Shacks Corner, Southard, Squankum, West Farms, Winston Park, Wyckoff Mills, and Yellow Brook. Historic aerial imagery shows the slow growth of the township through the mid-twentieth century, including the construction of the weapons station in the 1940s, the construction of I-195 in the 1970s, the establishment of the Manasquan Reservoir in the 1990s, and the expansion of suburbs throughout the township in the mid- and late-twentieth century (Howell Township, 2016; NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The first Euro-American settlement in the area was a Methodist church society founded in the 1760s in present-day Adelphia. Several additional communities were established in the late eighteenth and early-nineteenth centuries with Howell Township formally incorporated in 1801. In the first half of the nineteenth century, Farmingdale (no longer part of Howell Township) was the commercial center of the township. Industries in the township during the nineteenth century included iron production, marl extraction, brick-making, and munition manufacturing. Through the twentieth century, the township remained relatively rural and agricultural. In 1903, Farmingdale was incorporated as a borough. In 1912, the Howell Preventorium was opened as a tuberculosis quarantine center for children and operated until about 1962. In 1943, the Naval Weapons Station Earle was commissioned in northern Howell Township to support the World War II effort. The weapons station still operates today. Most of the railroads in the township ceased operation in the twentieth century as many of the large industries from the nineteenth century declined. The mid- and late-twentieth century saw the improvement of road infrastructure and the growth of suburban developments in parts of the township. Today, Howell Township remains primarily agricultural, with small centers of commerce and additional undeveloped natural areas used for recreation (Howell Township, 2023; Snyder, 2004; Williams, 2000).

Significance: 768 Oak Glen Road is associated with late-twentieth-century development in Howell Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 768 Oak Glen Road is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 768 Oak Glen Road is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 662 Oak Glen Road is a heavily altered one-story side-gabled residence with an infilled porch and attached garage. The residence is five bays wide and three bays deep. It consists of a gabled rectangular main block with a shed-roof porch occupying two-thirds of the façade. The porch has been built-out for additional living space and extends beyond the north elevation with an attached garage. The exterior wall cladding appears to be aluminum on the main block and the upper section of the porch. The rest of the porch and garage appears to be clad in vertical wood plank or plywood. The primary entrance is in the center of the porch and is flanked by a projecting picture window or a fully glazed oriel on one side and a single 1/1 replacement sash on the other. Otherwise, the fenestration is 2/2 wood sash with horizontal divisions.

Exterior Description: The building at 680 Oak Glen Road is a one-and-one-half-story cross-gable residence with a projecting gable-front volume on the second-story facade above a center porch. The house has a main block that is one bay wide and is flanked by two secondary blocks. The north block is stepped forward of the main block with two bays and a gable front facing the road. The porch extends from the side elevation of the north block across the façade of the main block to the juncture with the south block. Columns support the roof of the porch, which is an extension of the roof eaves, and a single bay gable-front projection on the second story. The primary entrance is in the center of the façade with an oval light and with sidelights. The south block has a gable front and is embanked with a two-bay carport below grade. An oriel window is on the façade of the south block to the left of the entrance. There is a tripartite casement sash above the entrance in the second-story projection. Otherwise, the fenestration is 1/1 replacement sash, singly and in pairs, or fixed sash.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 4 Arnold Boulevard is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 4 Arnold Boulevard is recommended Not Eligible for inclusion in the NRHP.

Exterior Finish Materials: Vinyl Siding

Exterior Description: The building at 1139 Lakewood Farmingdale Road is a one-story ranch house with an attached garage. The residence is five bays wide on the main block and two bays deep. The façade is clad in stone veneer or a simulated veneer. The north elevation is clad in vinyl siding. The fenestration on the main block is 1/1 replacement sash with a bank of three to the right of the center entrance. The south elevation has a side-gabled vinyl-sided wing with a single bay of horizontal operable sash on the street-facing elevation. A two-bay attached garage is set back from the wing.

Interior Description: N/A

Setting: Howell Township is in southern Monmouth County and comprises several unincorporated communities, including Ramtown, Adelphia, Ardena, Ardmore Estates, Bergerville, Candlewood, Collingwood Park, Fairfield, Fort Plains, Freewood Acres, Jerseyville, Lake Club, Land of Pines, Larrabees, Lippencotts Corner, Lower Squankum, Matthews, Maxim, Oak Glen, Parkway Pines, Salem Hill, Shacks Corner, Southard, Squankum, West Farms, Winston Park, Wyckoff Mills, and Yellow Brook. Historic aerial imagery shows the slow growth of the township through the mid-twentieth century, including the construction of the weapons station in the 1940s, the construction of I-195 in the 1970s, the establishment of the Manasquan Reservoir in the 1990s, and the expansion of suburbs throughout the township in the mid- and late-twentieth century (Howell Township, 2016; NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The first Euro-American settlement in the area was a Methodist church society founded in the 1760s in present-day Adelphia. Several additional communities were established in the late eighteenth and early-nineteenth centuries with Howell Township formally incorporated in 1801. In the first half of the nineteenth century, Farmingdale (no longer part of Howell Township) was the commercial center of the township. Industries in the township during the nineteenth century included iron production, marl extraction, brick-making, and munition manufacturing. Through the twentieth century, the township remained relatively rural and agricultural. In 1903, Farmingdale was incorporated as a borough. In 1912, the Howell Preventorium was opened as a tuberculosis quarantine center for children and operated until about 1962. In 1943, the Naval Weapons Station Earle was commissioned in northern Howell Township to support the World War II effort. The weapons station still operates today. Most of the railroads in the township ceased operation in the twentieth century as many of the large industries from the nineteenth century declined. The mid- and late-twentieth century saw the improvement of road infrastructure and the growth of suburban developments in parts of the township. Today, Howell Township remains primarily agricultural, with small centers of commerce and additional undeveloped natural areas used for recreation (Howell Township, 2023; Snyder, 2004; Williams, 2000).

Significance: 1139 Lakewood Allenwood Road is associated with late-twentieth-century development in Howell Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

In the first half of the nineteenth century, Farmingdale (no longer part of Howell Township) was the commercial center of the township. Industries in the township during the nineteenth century included iron production, marl extraction, brick-making, and munition manufacturing. Through the twentieth century, the township remained relatively rural and agricultural. In 1903, Farmingdale was incorporated as a borough. In 1912, the Howell Preventorium was opened as a tuberculosis quarantine center for children and operated until about 1962. In 1943, the Naval Weapons Station Earle was commissioned in northern Howell Township to support the World War II effort. The weapons station still operates today. Most of the railroads in the township ceased operation in the twentieth century as many of the large industries from the nineteenth century declined. The mid- and late-twentieth century saw the improvement of road infrastructure and the growth of suburban developments in parts of the township. Today, Howell Township remains primarily agricultural, with small centers of commerce and additional undeveloped natural areas used for recreation (Howell Township, 2023; Snyder, 2004; Williams, 2000).

Significance: 411 Alexander Avenue is associated with mid-twentieth-century development in Howell Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 411 Alexander Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 411 Alexander Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 403 Alexander Avenue is a front gabled, single-story residence on a poured concrete foundation. The principal elevation is symmetrical with an unsheltered, centered entry with simple steps and railings flanked by paired vinyl, double hung windows on either side. The house is set back from the road in a largely wooded lot.

Interior Description: N/A

Setting: Howell Township is in southern Monmouth County and comprises several unincorporated communities, including Ramtown, Adelphia, Ardena, Ardmore Estates, Bergerville, Candlewood, Collingwood Park, Fairfield, Fort Plains, Freewood Acres, Jerseyville, Lake Club, Land of Pines, Larrabees, Lippencotts Corner, Lower Squankum, Matthews, Maxim, Oak Glen, Parkway Pines, Salem Hill, Shacks Corner, Southard, Squankum, West Farms, Winston Park, Wyckoff Mills, and Yellow Brook. Historic aerial imagery shows the slow growth of the township through the mid-twentieth century, including the construction of the weapons station in the 1940s, the construction of I-195 in the 1970s, the establishment of the Manasquan Reservoir in the 1990s, and the expansion of suburbs throughout the township in the mid- and late-twentieth century (Howell Township, 2016; NETR, 2023).

Exterior Description: The building at 1808 East Riverside Drive is a two-story, three-bay duplex clad in running bond brick on the first story, and vinyl siding on the second story. The primary façade features a one-bay gable roof over the primary entrance. The low pitch roof section meets the gable end roof one bay deep into the building. There are symmetrical, single, 1/1 windows on either side of the door. The second story, clad in vinyl siding on all sides, features a central picture window, flanked by two smaller vertical windows. To the right of the primary façade, an attached set of wooden steps, facing easterly, provides access to the secondary entrance for the occupants of the second story of the duplex.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 1808 E RIVERSIDE DR is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 1808 E RIVERSIDE DR is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 1808 E RIVERSIDE DR is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials: Asphalt shingle

Exterior Finish Materials Vinyl siding

Exterior Description: The building at 113 North Congress Avenue is a two-story, two bay building clad in vinyl siding and capped in an asphalt shingle roof. The primary entrance is housed under the left bay entry porch with a small set of steps that lead to it. The right bay holds a 6/1 window. The second story holds two centered 6/1 windows and a small 4/1 window that is set just under the gable of the roof.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

Historic Sites #:

Common Name: 121 North Maryland Avenue

Historic Name: N/A

Present Use: Residential Activity, Permanent

Historic Use: Residential Activity, Permanent

Construction Date: 1900 **Source:** njtaxrecords.net

Alteration Date(s): N/A **Source:** N/A

Designer: N/A **Physical Condition:** Fair

Builder: N/A **Remaining Historic Fabric:** Low

Style: Other

Form: Other **Stories:** 3

Type: N/A **Bays:** 2

Roof Finish Materials: Asphalt shingle

Exterior Finish Materials Vinyl siding

Exterior Description: The building at 121 North Maryland Avenue is a three-story, two bay building. The building is clad in vinyl siding and topped in an asphalt shingle roof. The first-story entry is sheltered by a two bay covered porch, which is lined with a simple railing. The entrance resides in the left bay with a small transom light. The right bay features a 1/1 window with a decorative grate. The second and third stories each hold two symmetrically placed 1/1 windows.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 121 North Maryland Avenue is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 121 North Maryland Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 121 North Maryland Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 117 North Maryland Avenue is a two-story, two bay building clad in stucco and brick. The building is capped with a tile roof. Brick frames the stucco with quoins and partial cladding around the base of the building. The asymmetrical, primary façade features an extended left bay on the first story topped with a gabled parapet. The extended bay holds three, narrow, arched windows. The front entrance features five brick steps up to the landing, lined on the right side by a brick railing. The entrance is crowned by a gable pediment, providing partial shelter over the landing. The second story holds a small balcony in the left bay, and a rectangular window. The right bay holds two, narrow, arched windows.

The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 728 ADRIATIC AVE is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 728 ADRIATIC AVE is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 728 ADRIATIC AVE is recommended Not Eligible for inclusion in the NRHP.

Style:	Other		
Form:	Row	Stories:	2
Type:	N/A	Bays:	2
Roof Finish Materials:	Asphalt shingle		
Exterior Finish Materials	Brick		

Exterior Description: The building at 362 North Pennsylvania Avenue is a two-story, two-bay rowhouse. The building is clad in red brick and is capped with an asphalt shingle roof, which follows the curved fenestration of the second-story bay window. The first story is sheltered under a covered, wooden porch, framed by an iron railing and supported by three, decorative iron columns. The left bay holds a large 1/1 window. The second story holds a centered bay window, flanked on either side with red brick.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. Roof Finish Materials: Asphalt shingle

Exterior Finish Materials Wood shingle

Exterior Description: The building at 912 North Arkansas Avenue is an oil storage facility consisting of two tall cylindrical oil storage tanks and an associated structure. The associated structure is a small, single story, one bay shed building. The building features two single pane 1/1 windows on the visible façade.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 912 North Arkansas Avenue is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 912 North Arkansas Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 912 North Arkansas Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 700 North Rhode Island Avenue is a two-story concrete block industrial warehouse on a rusticated concrete block foundation. The northeast elevation has four bays, each separated by square pilasters that stop short of rising to the roof line. Fenestration includes 8/8, double-hung vinyl windows and six-pane windows of unknown operability with concrete sills, all with false muntins. The wall surface is characterized by mostly flat blocks interspersed with random rusticated blocks. The western bay on this elevation features a metal door and window on the first story, and a pair of windows on the second, all set within a full height band of wood panel siding. Above this bay on the roof is a shed roof dormer with a pair of smaller windows. The southeast elevation features a single large metal overhead door. The gable on this elevation is clad in vinyl siding that imitates wood shingles. The roof is clad in asphalt shingles.

Roof Finish Materials: Unknown

Exterior Finish Materials Vinyl Siding

Exterior Description: The building at 434 North Maryland Avenue is a two-story row house with an engaged neighbor that is a mirror design. The house is two stories with vinyl siding. The façade is two bays on the first story with a projecting left bay with a ribbon window shielded by a pent roof, and with the primary entrance in the right bay. Above the entry is a vinyl-clad chimney that rises above the parapet roof. The side elevation is three bays wide with a square oriel in the middle bay of the second story, and a projecting bay in the left bay of the first story. The fenestration is 1/1 replacement sash placed singly and in pairs.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 434 N MARYLAND AVE is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 434 N MARYLAND AVE is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 434 N MARYLAND AVE is recommended Not Eligible for inclusion in the NRHP.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 444 North Maryland Avenue is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 444 North Maryland Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 444 North Maryland Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Asphalt shingle		
Exterior Finish Materials	Vinyl siding		

Exterior Description: The building at 806 Wabash Avenue is a two-story, two-bay building. The building is clad in vinyl siding and topped with an asphalt shingle roof. The first-story bays are sheltered under a gable-front, covered porch. The left bay holds three vertical, rectangular windows. The entrance is held in the right bay and is approached by four brick steps. The second-story features two symmetrical 1/1 windows and exposed rafters under the eaves of the roof.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

Exterior Description: The resource at 441 North Maryland Avenue is a two-story corner commercial building with a flat roof, second-story balcony, Permastone first story, and vinyl second. The first-story storefront has wide bays with rolltop doors. The corner is clipped and appears to be the entry. The second story appears to be residential and has irregularly placed 1/1 replacement windows. There is a pedestrian door that provides access to the balcony that wraps around both street-facing elevations.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 441 North Maryland Avenue is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 441 North Maryland Avenue not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 441 North Maryland Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 401 North Delaware Avenue is a two-story duplex with vinyl siding. The building is topped with a simple parapet. The front façade features a porch on the first and second story, with stairs that connect the two to provide access for the second story occupants. The entrances are on the primary façade in the right-most bay. The remainder of the primary façade features two 1/1 windows on each story. The southeastern façade is five bays. This façade features 10 asymmetrical windows hung 1/1.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 401 N DELAWARE AVE is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 401 N DELAWARE AVE is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 401 N DELAWARE AVE is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 403 Delaware Avenue is a one-story, five-bay building, clad in vinyl siding, and partially in stone. The two right bays each hold two, paired, 1/1 windows. The entrance is held in the central bay, approached by a narrow walkway. To the left of the door is a central picture window, flanked by narrow, 1/1 windows, which is a typical feature found on ranch houses. Ashlar coursed stone partially clads the primary façade and rises to the bottom of the windows. Over the fifth bay, a stone chimney is visible on the low-pitch roof.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 712 Magellan Avenue is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 712 Magellan Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 712 Magellan Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Asbestos Siding		

Exterior Description: The building at 560 North New Jersey Avenue is a 1960 Ranch residence resting on a concrete block foundation, clad in asbestos siding, and capped by a hip roof covered in asphalt shingles. The façade faces northeast and features a band of faux stone veneer, a half-width front porch capped by a hip-roof extension, and a pergola above the remaining facade. Fenestration consists of 1/1 windows and there is a bay window on the façade.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

Exterior Description: The building at 734 Magellan Avenue is a two-story row house with an engaged neighbor that is a mirror design. The residence is two bays wide and three bays deep with vinyl siding and a brick-clad foundation. The first-story façade features a projecting bay with a ribbon window with 1/1 sash. To the left of the projecting bay is the primary entrance. The second-story façade has one 1/1 sash in the left bay and paired 1/1 sash in the right bay. The façade terminates at the flat roof with a stepped parapet. The side elevation has 1/1 sash, both singly and paired. A hipped-roof square oriel occupies the center of the second story. There is a one-story shed-roof rear wing.

The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 545 North Delaware Avenue is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 545 North Delaware Avenue not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 545 North Delaware Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Asphalt shingle		
Exterior Finish Materials	Vinyl siding		

Exterior Description: The building at 553 North Delaware Avenue is a single-story, four-bay building clad in vinyl siding and topped with an asymmetrical asphalt shingle roof which creates a partial cover for the entrance and the leftmost bays. Three steps lead up to a landing with railings that frames the primary entrance. The leftmost bay features three single hung 6/6 windows. The rightmost bays feature two, smaller, single hung 6/6 windows.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 553 North Delaware Avenue is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The building at 919 North Doctor Martin Luther King Boulevard is a two-story, three-bay, split-level duplex. The building is clad in running bond brick and wood siding. The primary façade features two primary entrances in the central bay, sheltered under a gabled entry porch. The left bay features four paired single, 1/1 windows. The windows are flanked by decorative shutters. The rightmost bay features three paired 1/1 windows flanked by decorative shutters. The second story spans the central and left bays and holds two sets of paired windows that match the style of the other windows. The northerly façade features the garage door, and a small 1/1 window on the first story, and asymmetrical windows set onto the wood siding.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 919 North Doctor Martin Luther King Boulevard is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 919 North Doctor Martin Luther King Boulevard is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 919 North Doctor Martin Luther King Boulevard is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The buildings at 1062 Brigantine Boulevard are a complex of apartments clad in brick and vinyl siding and capped with asphalt shingle roofs. The buildings, which hold the individual apartments all follow a similar design. The dark brick siding clads the entire first story of the building and the second story is clad in light vinyl siding. On some units, the brick clads both the first and second story of one bay. There is a paired, 1/1 window contained in the left bay on the first and second floors. The right bay holds a paired 1/1 on the second and a smaller, individual 1/1 in the right bay. The entrances to each unit are centered between bays.

Exterior Description: The building at 827 North Massachusetts Avenue is a three-story, three bay building. The building is clad in vinyl siding and is capped with an asphalt shingle roof. The first story appears to be a storage area, there are no publicly visible entrances. The second story holds an entrance on the northerly façade at the top of a set of stairs lined on both sides with railing. On the westerly façade, there is a balcony that stretches across all three bays. There is a centrally located door, providing access to the balcony, topped with a decorative pediment which is a highlight of the fenestration and roof overhang around the top of the second story. There are two, 1/1 windows symmetrically placed on either side of the door. The third story, on the westerly façade, holds a central 8/8 window topped with a decorative pediment that echoes the pediment over the balcony door. The northerly façade holds two asymmetrical windows on the second story and seven asymmetrical windows of varying sizes on the third story. The northerly side of the roof also holds two eyebrow dormers which each cap a window.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 827 N MASSACHUSETTS AVE is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 827 N MASSACHUSETTS AVE is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 827 N MASSACHUSETTS AVE is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 555 North New Jersey Avenue is a two-story, four-bay building. The building is clad in wooden shingle and topped with an asphalt shingle roof. The first-story bays are sheltered under an asphalt shingle covered porch. The porch is supported by six wooden beams. The leftmost bay holds a simple 1/1 window. To the right of the window is the primary entrance. The third bay holds a bay window with a central picture window, flanked by narrow, 1/1 windows. The fourth bay on the first story holds a metal staircase which leads up to a small, one bay balcony on the second story. Along with the shingle-clad balcony, the second story features five, asymmetrical 1/1 windows.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 555 North New Jersey Avenue is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 555 North New Jersey Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 555 North New Jersey Avenue is recommended Not Eligible for inclusion in the NRHP.

The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 427 CARSON AVE is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 427 CARSON AVE is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 427 CARSON AVE is recommended Not Eligible for inclusion in the NRHP.

Type:	N/A	Bays:	1
Roof Finish Materials:	Metal		
Exterior Finish Materials	Wood siding		

Exterior Description: The building at 477 Carson Avenue is a single-story, single-bay building. The building is clad in wooden siding and topped with a corrugated metal roof. The building is barn-like and features several, asymmetrical, small, 1/1 windows. The property also holds an additional associated building clad in stucco, with a low-pitch roof. This building features four, small windows on the primary façade.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

Exterior Description: The building at 531 North New Jersey Avenue is a two-story vernacular residence constructed circa 1980, clad in wood shingle siding, and capped by a flat roof with pent roofs covered in asphalt shingles. The façade faces southwest and features a centered, raised, main entrance accessed by a short flight of concrete stairs and topped by a multi-pane fixed arched window, a slightly projecting northern bay with an interior garage and a one-story bay window above the garage, and a two-story bay window to the south of the main entrance with a secondary entrance at ground level in the southernmost portion of the façade.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 531 North New Jersey Avenue is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 531 North New Jersey Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 531 North New Jersey Avenue is recommended Not Eligible for inclusion in the NRHP.

Designer: <u>N/A</u>	Physical Condition: <u>Good</u>
Builder: <u>N/A</u>	Remaining Historic Fabric: <u>Low</u>
Style: <u>None</u>	
Form: <u>Bungalow</u>	Stories: <u>1</u>
Type: <u>N/A</u>	Bays: <u>3</u>
Roof Finish Materials: <u>Asphalt Shingle</u>	
Exterior Finish Materials <u>Vinyl Siding</u>	

Exterior Description: The building at 627 Sewell Avenue is a one-story hipped-roof bungalow with a recessed porch and vinyl siding. There is a hipped roof dormer above the porch with a single fixed sash window. The porch has square supports atop a concrete deck. The facade is three bays wide with the primary entrance in the central bay flanked by a pair of 1/1 sash on one side and a single 1/1 sash on the other. The fenestration on the side elevations is 1/1 sash paired and singly placed.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 627 SEWELL AVE is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 627 SEWELL AVE is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 627 SEWELL AVE is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 724 Magellan Avenue is a two-story row house with an engaged neighbor that is a mirror design. The residence is two bays wide and three bays deep with vinyl siding. The first-story façade is projected with a ribbon window with 1/1 sash in the right bay and the primary entrance in the left bay. The second-story façade has paired 1/1 sash in the right bay and a single 1/1 sash in the left. The façade terminates at the flat roof with a stepped parapet. A hipped-roof square oriel occupies the center of the second story on the side elevation.
