EXECUTIVE SUMMARY

On behalf of Atlantic Shores Offshore Wind, LLC (Atlantic Shores), a 50/50 joint venture between EDF-RE Offshore Development, LLC, a wholly owned subsidiary of EDF Renewables, Inc. (EDF Renewables) and Shell New Energies US, LLC (Shell), Environmental Design & Research, Landscape Architecture, Engineering, & Environmental Services, D.P.C. (EDR) prepared this intensive-level architectural survey in accordance with the New Jersey Historic Preservation Office's (NJHPO) *Guidelines for Architectural Survey*. The Atlantic Shores Offshore Wind – Wind Turbine Area consists of two offshore wind energy generation projects within the southern portion of Bureau of Ocean Energy Management (BOEM) Lease Area OCS-A 0499 for renewable energy generation from offshore wind. The Projects are comprised of up to 200 wind turbine generators (WTGs), up to 10 offshore substation (OSS) positions, up to eight cables installed within two offshore export cable corridors (ECCs), two onshore substation and/or converter stations connected from the landfall sites to onshore interconnection cables, and one O&M Facility located in Atlantic City, NJ. The purpose of this survey report is to document aboveground historic properties located within the Projects' Preliminary Area of Potential Effects (PAPE) for all offshore and onshore project components. Separate Historic Resources Visual Effects Assessment (HRVEA) reports prepared by EDR summarize the potential visual effects of the offshore components of the Projects to aboveground historic properties listed in, or eligible for listing in the National Register of Historic Places (NRHP) for the Wind Turbine Area (EDR, 2023a), Onshore Interconnection Facilities (EDR, 2023b), and Operations & Maintenance (O&M) Facility (EDR, 2023c).

EDR's Secretary of the Interior (SOI) Qualified Professionals completed a desktop review and field survey of the PAPEs to identify properties that meet the criteria for listing in the National Register of Historic Places (NRHP), which resulted in the following:

Wind Turbine Area PAPE: A total of 123 aboveground properties were documented within the WTA PAPE, including:

- 2 National Historic Landmarks (NHLs)
- 16 NRHP-Listed Properties
- 62 Properties Previously Determined NRHP-Eligible
- 2 Local Historic Properties
- 41 Properties Recommended NRHP-Eligible

Onshore Interconnection Facilities PAPE: A total of 18 properties were documented within the Onshore Facilities PAPEs, including three NRHP-eligible properties, and 15 properties recommended to not meet NRHP eligibility criteria.

O&M Facility PAPE: A total of 102 properties were documented within the O&M Facility PAPE, including seven NRHP-eligible properties, and 95 properties recommended to not meet NRHP eligibility criteria.

1.0 INTRODUCTION

1.1 Project Background

On behalf of Atlantic Shores Offshore Wind, LLC (Atlantic Shores), a 50/50 joint venture between EDF-RE Offshore Development, LLC, a wholly owned subsidiary of EDF Renewables, Inc. (EDF Renewables) and Shell New Energies US, LLC (Shell), Environmental Design & Research, Landscape Architecture, Engineering, & Environmental Services, D.P.C. (EDR) prepared this intensive-level architectural survey in support of the Atlantic Shores Construction and Operations Plan (COP) for two offshore wind energy generation projects (the Projects) within the southern portion of BOEM Lease Area OCS-A 0499 for renewable energy generation from offshore wind, and all associated onshore infrastructure (see Section 1.3).

The purpose of the survey is to identify and document aboveground historic properties within the Preliminary Area of Potential Effects (PAPE) for each aboveground component of the Projects (as described below in Section 2.2) and to evaluate the Projects' potential visual effects on the qualities that make aboveground historic properties eligible for listing in the State¹ and/or National Register of Historic Places (S/NRHP). Per 36 CFR 800.16, aboveground historic properties are defined as districts, buildings, structures, objects, or sites that are listed or eligible for listing in the National Register of Historic Places (NRHP) or which have been designated as National Historic Landmarks (NHL).

1.2 Regulatory Context for Review of Effects on Historic Properties

The Projects are considered a federal undertaking and therefore, subject to Section 106 of the National Historic Preservation Act (NHPA) (54 USC 306108). This survey was completed at the request of the NJHPO as a component of BOEM's Section 106 consultation process. In 2020, the BOEM Office of Renewable Energy Programs issued updated *Guidelines for Providing Archaeological and Historic Property Information, Pursuant to 30 CFR 585*² (BOEM, 2020), which states the following with regard to identification of historic properties:

BOEM requires detailed information regarding the nature and location of historic properties that may be affected by an applicant's proposed activities to conduct review of the plan under Section 106 of NHPA (54 U.S.C. § 306108). As defined in the regulations implementing Section 106 [36 CFR § 800.16 (1) (1)],

Historic property means any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion in, the National Register of Historic Places maintained by the Secretary of the Interior. This term includes artifacts, records, and remains that are related to and located within such properties. This term also includes properties of traditional religious and cultural importance to an Indian tribe or Native Hawaiian organization and that meet the National Register criteria (BOEM, 2020: 2).

¹ For the purposes of this report, SRHP refers specifically to the New Jersey Register of Historic Places.

² Available online at <https://www.boem.gov/sites/default/files/renewable-energy-program/Guidelines-for-Providing-Archaeological-and-Historic-Property-Information-Pursuant-to-30CFR585.pdf> (Accessed June 17, 2020).

The *Guidelines for Providing Archaeological and Historic Property Information* includes methods for identification of historic properties, as well as coordination with BOEM and relevant State Historic Preservation Offices (SHPOs) and Tribal Historic Preservation Offices (THPOs).

The intensive-level architectural survey is intended to assist the New Jersey Department of Environmental Protection (NJDEP), New Jersey State Historic Preservation Office (NJHPO), the Bureau of Ocean and Energy Management (BOEM), and other relevant New Jersey State and/or Federal agencies and consulting partners in their review of the Projects under Section 7:4 of the NJAC, the State of New Jersey Executive Order #215, and/or Section 106 and 110(f) of the National Historic Preservation Act (NHPA), and the National Environmental Policy Act (NEPA), as applicable.

The survey has been conducted in accordance with the New Jersey Historic Preservation Office's (NJHPO) *Guidelines for Architectural Survey* (NJHPO, 2020) by professionals who satisfy the qualifications criteria per the Secretary of the Interior's (SOI) Professional Qualifications Standards for archaeology and architectural history (36 CFR Part 61), as appropriate. The survey report was prepared in accordance with applicable portions of NJAC § 7:4-8.6, *Standards for Architectural Survey Reports* (NJHPO, 2008).

Separate Historic Resources Visual Effects Assessment (HRVEA) reports prepared by EDR summarize the potential visual effects of the offshore and onshore components of the Projects to properties listed in, or eligible for listing in, the National Register of Historic Places in accordance with 36 CFR 800.5 (EDR, 2023a, 2022b, and 2023c). The discussion of effects on aboveground historic properties in these reports is limited to potential visual effects of the above-surface components of the offshore and onshore components of the Project on the visual setting of aboveground historic properties. However, a complete description of all offshore and onshore components of the Projects is provided below.

1.3 Overview of the Projects

Atlantic Shores' Lease Area is located on the OCS within the New Jersey Wind Energy Area (NJWEA), which was identified by BOEM as suitable for offshore renewable energy development through a multi-year, public environmental review process. The Projects will be located in an approximately 102,124-acre (413.3-square kilometer [km²]) Wind Turbine Area (WTA) located in the southern portion of the Lease Area (see Figure 1.3-1). Project 1 is located in the western 54,175 acres (219.2 km²) of the WTA, and Project 2 is located in the eastern 31,847 acres (128.9 km²) of the WTA with a 16,102-acre (65.2-km²) Overlap Area that could be used by either Project 1 or Project 2. Figure 1.3-1 also depicts the boundaries of the Project 1 and Project 2 areas within the WTA.

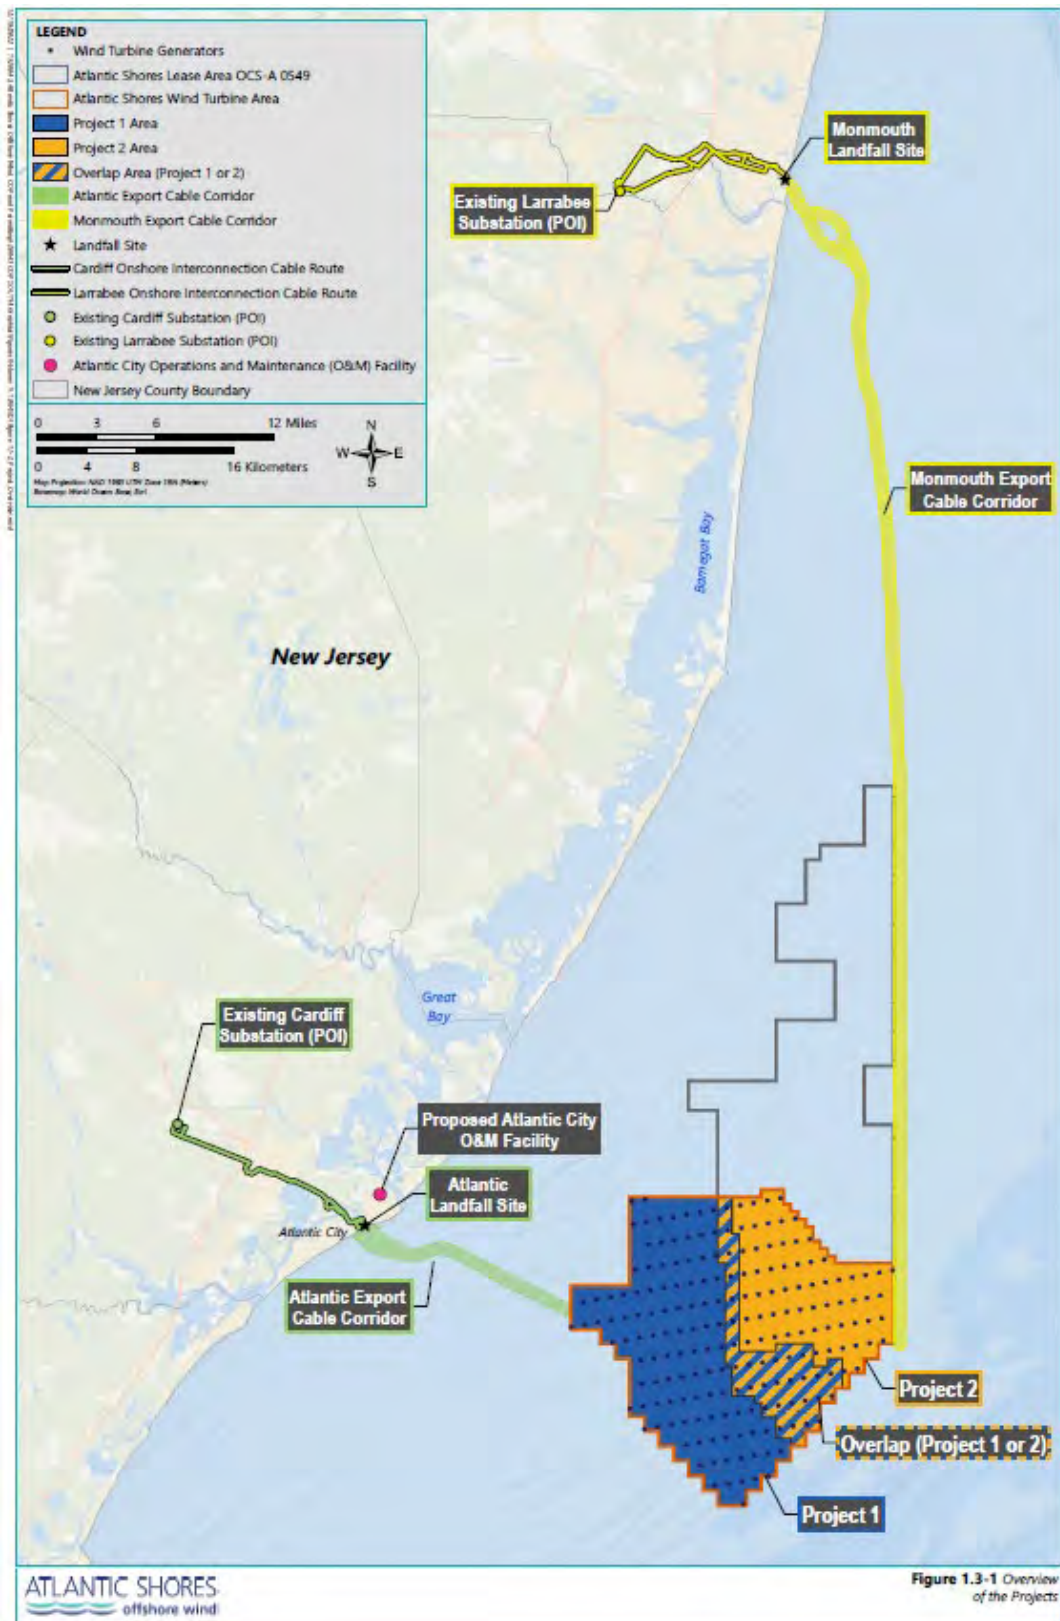

Figure 1.3-1. Overview of the Projects

1.3.1 Project Design Envelope

Atlantic Shores has applied a Project Design Envelope (PDE) approach to describe the facilities and activities associated with the Projects. A PDE is defined as “a reasonable range of project designs” associated with various components of a project (e.g., foundation and WTG options) (BOEM, 2018). In accordance with the PDE evaluation approach, the assessment of project effects must include the maximum design case for all project development scenarios. Consistent with BOEM’s *Draft Guidance Regarding the Use of a Project Design Envelope in a Construction and Operations Plan* (2018), this HREA considers a maximum design case layout. The layout represents the largest geographic footprint that could be occupied by visible structures and, therefore, the largest percentage of the visible horizon from shoreline locations that may be affected by the Projects. The maximum design case components are described below in Table 1.3-1.

Table 1.3-1. Key Elements of the PDE.

Element	Project Design Element	Total	Project 1	Project 2
WTGs	Max. Number of WTGs	200 (inclusive of the 31 WTGs in the Overlap Area) ^a	105-136	64-95
	WTG Layout	Grid layout with ENE/WSW rows and approximately N/S columns, consistent with the predominant flow of traffic		
	Max. rotor diameter	918.6 ft (280.0 m)		
	Max. tip height ^b	1,048.8 ft (319.7 m)		
OSSs	Max. Number of OSSs	10 small OSSs, or	5	5
		5 medium OSSs, or	2	3
		4 large OSSs	2	2
	OSS Layout	Positioned along the same ENE/WSW rows as WTGs		
	Min. Distance from Shore	Small OSS: 12 mi (19.3 km) Medium and large OSS: 13.5 mi (21.7 km)		
WTG and OSS Foundations	<u>Foundation types</u>			
	Piled	Monopiles or piled jackets		
	Suction bucket	Mono-buckets, suction bucket jackets, or suction bucket tetrahedron bases ^c		
	Gravity	Gravity-base structures (GBS) or gravity-pad tetrahedron bases ^c		
	Max. pile diameter at seabed (for piled foundation types)	Monopile: 49.2 ft (15.0 m) Piled jacket: 16.4 ft (5.0 m)		
Inter-Array and Inter-Link Cables	Cable types and voltage	Inter-array: 66–150 kV high voltage alternating current (HVAC)		
		Inter-link: 66–275 kV HVAC		
	Max. Total Cable Length	Inter-array: 547 mi (880 km)	273.5 mi (440 km)	273.5 mi (440 km)
		Inter-link: 37 mi (60 km)	18.6 mi (30 km)	18.6 mi (30 km)
	Target burial depth range	5 to 6.6 ft (1.5 to 2 m)		

1.3.2 Description of Offshore Components

At its closest point, the WTA is approximately 8.7 miles (mi) (14 kilometers [km]) from the New Jersey shoreline. The WTA will include an array of wind turbine generators (WTGs) and multiple offshore substations (OSSs). A meteorological (met) tower and/or meteorological and oceanographic (metocean) buoys may also be installed in the WTA. The WTA layout is designed to maximize offshore renewable wind energy production while minimizing effects on existing marine uses. The structures will be aligned in a uniform grid with multiple lines of orientation allowing straight transit through the WTA.

For the development of the viewshed analysis and PAPE (see Section 2.2.1), all 200 foundation locations located within the WTA were analyzed using the largest WTGs included within the PDE in order to capture the maximum area of potential visibility. By evaluating the largest WTG currently under consideration, the theoretical WTG visibility increases for distant viewpoints, thereby providing a conservative assessment of visibility of the Projects.

Each WTG will consist of four major components: the foundation, the tower, the nacelle, and the rotor (Figure 1.3-2). The height of the tower, or “hub height” (height from the water’s surface to the center of the rotor) will be approximately 574.2 feet (175 m) above mean sea level (AMSL). The nacelle sits atop the tower, and the rotor hub is mounted to the nacelle. Assuming a maximum rotor diameter of 918.6 feet (280 m), the total WTG height (i.e., height AMSL at the highest blade tip position) will be approximately 1046.6 feet (319 m).

Descriptions of each of the proposed WTG components are provided below:

Foundation: For the purpose of this HREA, it was assumed that each of the WTGs will be anchored to the sea floor using a monopile foundation secured with a single steel pile driven into the sea floor. However, the WTGs may utilize suction bucket or concrete gravity base structure (GBS) foundations. The monopile foundation is a tubular steel structure with a diameter of 39.4 feet (12 m) AMSL, upon which the tower transition will be mounted. A suction bucket foundation option consists of a hollow tube embedded in the ocean floor which holds the structure in place through vacuum pressure. The GBS consists of steel-reinforced concrete sunk to the ocean floor and held in place by gravity. The foundation will extend above the water surface, and the exposed portion of the foundation will be yellow in color. A boat landing will be affixed to the foundation with a stairway connecting the landing to a railed deck at the base of the tower.

Tower: The towers used for the Projects are tapered hollow steel structures manufactured in three sections. The assembled towers have a diameter of approximately 32.8 feet (10 m) at the base and 27.9 feet (8.5 m) at the top. Two amber U.S. Coast Guard (USCG) warning lights will be mounted on the deck at the base of each tower. In accordance with the BOEM and Federal Aviation Administration (FAA) obstruction marking standards, the WTG will be painted a light grey (RAL 7035) to pure white (RAL 9010). Additionally, the tower will be equipped with a minimum of three low intensity red flashing lights (L-810) at the approximate mid-section of the tower, which will operate during nighttime hours only.

Nacelle: The main mechanical components of the WTG are housed in the nacelle. These components include the drive train, generator, and transformer. For the purpose of this study, the nacelle is assumed

to have maximum dimensions of approximately 82 feet (25 m) long, 52.5 feet (16 m) wide, and 39.4 feet (12 m) in height. Two aviation warning lights are proposed to be located on top of the nacelle, in accordance with BOEM and FAA guidelines. These will be medium intensity, flashing red lights (L-864) that are operated only at night, and will be synchronized with the L-810 lights described above. The WTG nacelle will be the same color as the tower and will not include any obvious lettering, logos, or other exterior markings (FAA, 2018). Where applicable, the lighting parameters presented in the VIA follow the current BOEM guidance for the lighting and marking of WTGs in order to illustrate the potential nighttime visual impacts associated with the Projects. However, lighting requirements may change based on final BOEM/FAA recommendations.

Rotor: A rotor assembly is mounted on the nacelle to operate upwind of the tower. The rotor consists of three composite blades, each approximately 452.8 feet (138 m) in length. The three-bladed rotor assembly will be light grey to white in color (consistent with the tower) and will have a maximum diameter of 918.6 feet (280 m). The rotor blades are rotated along their axis, or “pitched,” to enable them to operate efficiently at varying wind speeds. The rotor can spin at varying speeds, but typically rotates at a rate around 10 revolutions per minute.

The OSSs will be an enclosed structure measuring up to 295.3 feet long by 164 feet (90 m × 50 m) wide, with a maximum elevation of up to 131.2 feet (40 m) AMSL. For the purpose of this HREA, it is assumed that OSSs will be mounted on piled jacket foundations. However, the OSSs may utilize suction bucket or concrete GBS foundations. Diagram illustrating the appearance and dimensions of the WTG and OSS evaluated in this study are presented in Figure 1.3-2.

Figure 1.3-2. Computer Model of Offshore Platform and WTG Maximum Dimensions

Within the WTA, the WTGs and OSSs for Project 1 and Project 2 will be connected by two separate, electrically distinct systems of inter-array cables and/or inter-link cables. Energy from the OSSs will be delivered to shore by export cables that will travel within designed Export Cable Corridors (ECCs) from the WTA through federal and New Jersey state waters to one or two landfall sites on the New Jersey coastline. The Atlantic ECC extends from the western tip of the WTA to the Atlantic Landfall Site in Atlantic City, New Jersey. The Monmouth ECC extends from the eastern corner of the WTA, along the eastern edge of the Lease Area, to the Monmouth Landfall Site in Sea Girt, New Jersey. Both Projects 1 and 2 have the potential to use either ECC, and offshore export cables for each may also be co-located within an ECC.

At both the Monmouth and Atlantic Landfall Sites, horizontal directional drilling (HDD) will be employed to minimize impacts to the intertidal and nearshore habitats and ensure stable burial of the cables. From each landfall site, the onshore interconnection cables will travel underground primarily along existing roadways, utility rights-of-way (ROWs), and/or along bike paths to two new onshore substation and/or converter station sites. From the onshore substations and/or converter stations, the onshore

interconnection cables will continue to existing substations where the Projects will be connected into the electrical grid at the Cardiff Substation point of interconnection (POI) in Egg Harbor Township, New Jersey and/or the Larrabee Substation POI in Howell, New Jersey. While both Project 1 and Project 2 will be electrically distinct from one another, both Projects require the ability to interconnect at the two POIs to accommodate the maximum amount of electricity that could be generated by the Projects.

1.3.3 Description of Onshore Substation and Converter Facilities

Each Project will be electrically distinct and will require the use of an onshore substation (if HVAC export cables are used) or a converter station (if HVDC export cables are used). The onshore substation may use either an air-insulated switchgear design or a gas-insulated switchgear design pending the substations' final detailed design. The substation design and specific equipment will depend on whether the onshore interconnection cables are HVAC or HVDC.

Onshore interconnection cables will be installed from the landfall sites underground primarily along existing roadways, utility ROWs, and/or along bike paths to the proposed onshore substation and/or converter station sites. Easements and ROW for private parcels will be acquired where necessary. From the proposed onshore substations and/or converter stations, the onshore interconnection cables will continue to the proposed POIs at the existing Larrabee Substation and existing Cardiff Substation for interconnection to the electrical grid. (See Section 4.0 Project Design and Construction Activities of the COP for additional detailed information.)

If the HVAC option is constructed, each onshore substation will include up to four power transformers, static synchronous compensators (STATCOMs), shunt reactors, service station transformers, harmonic filter banks, and a substation control building. The tallest component of the substation will be the lightning mast which will be up to 80 feet (24.4 m) tall. The substation will receive electricity produced by the offshore components of the Atlantic Shores Offshore Wind Projects via a buried onshore transmission cable to convert the incoming voltage to the voltage at the existing grid point of interconnect (POI).

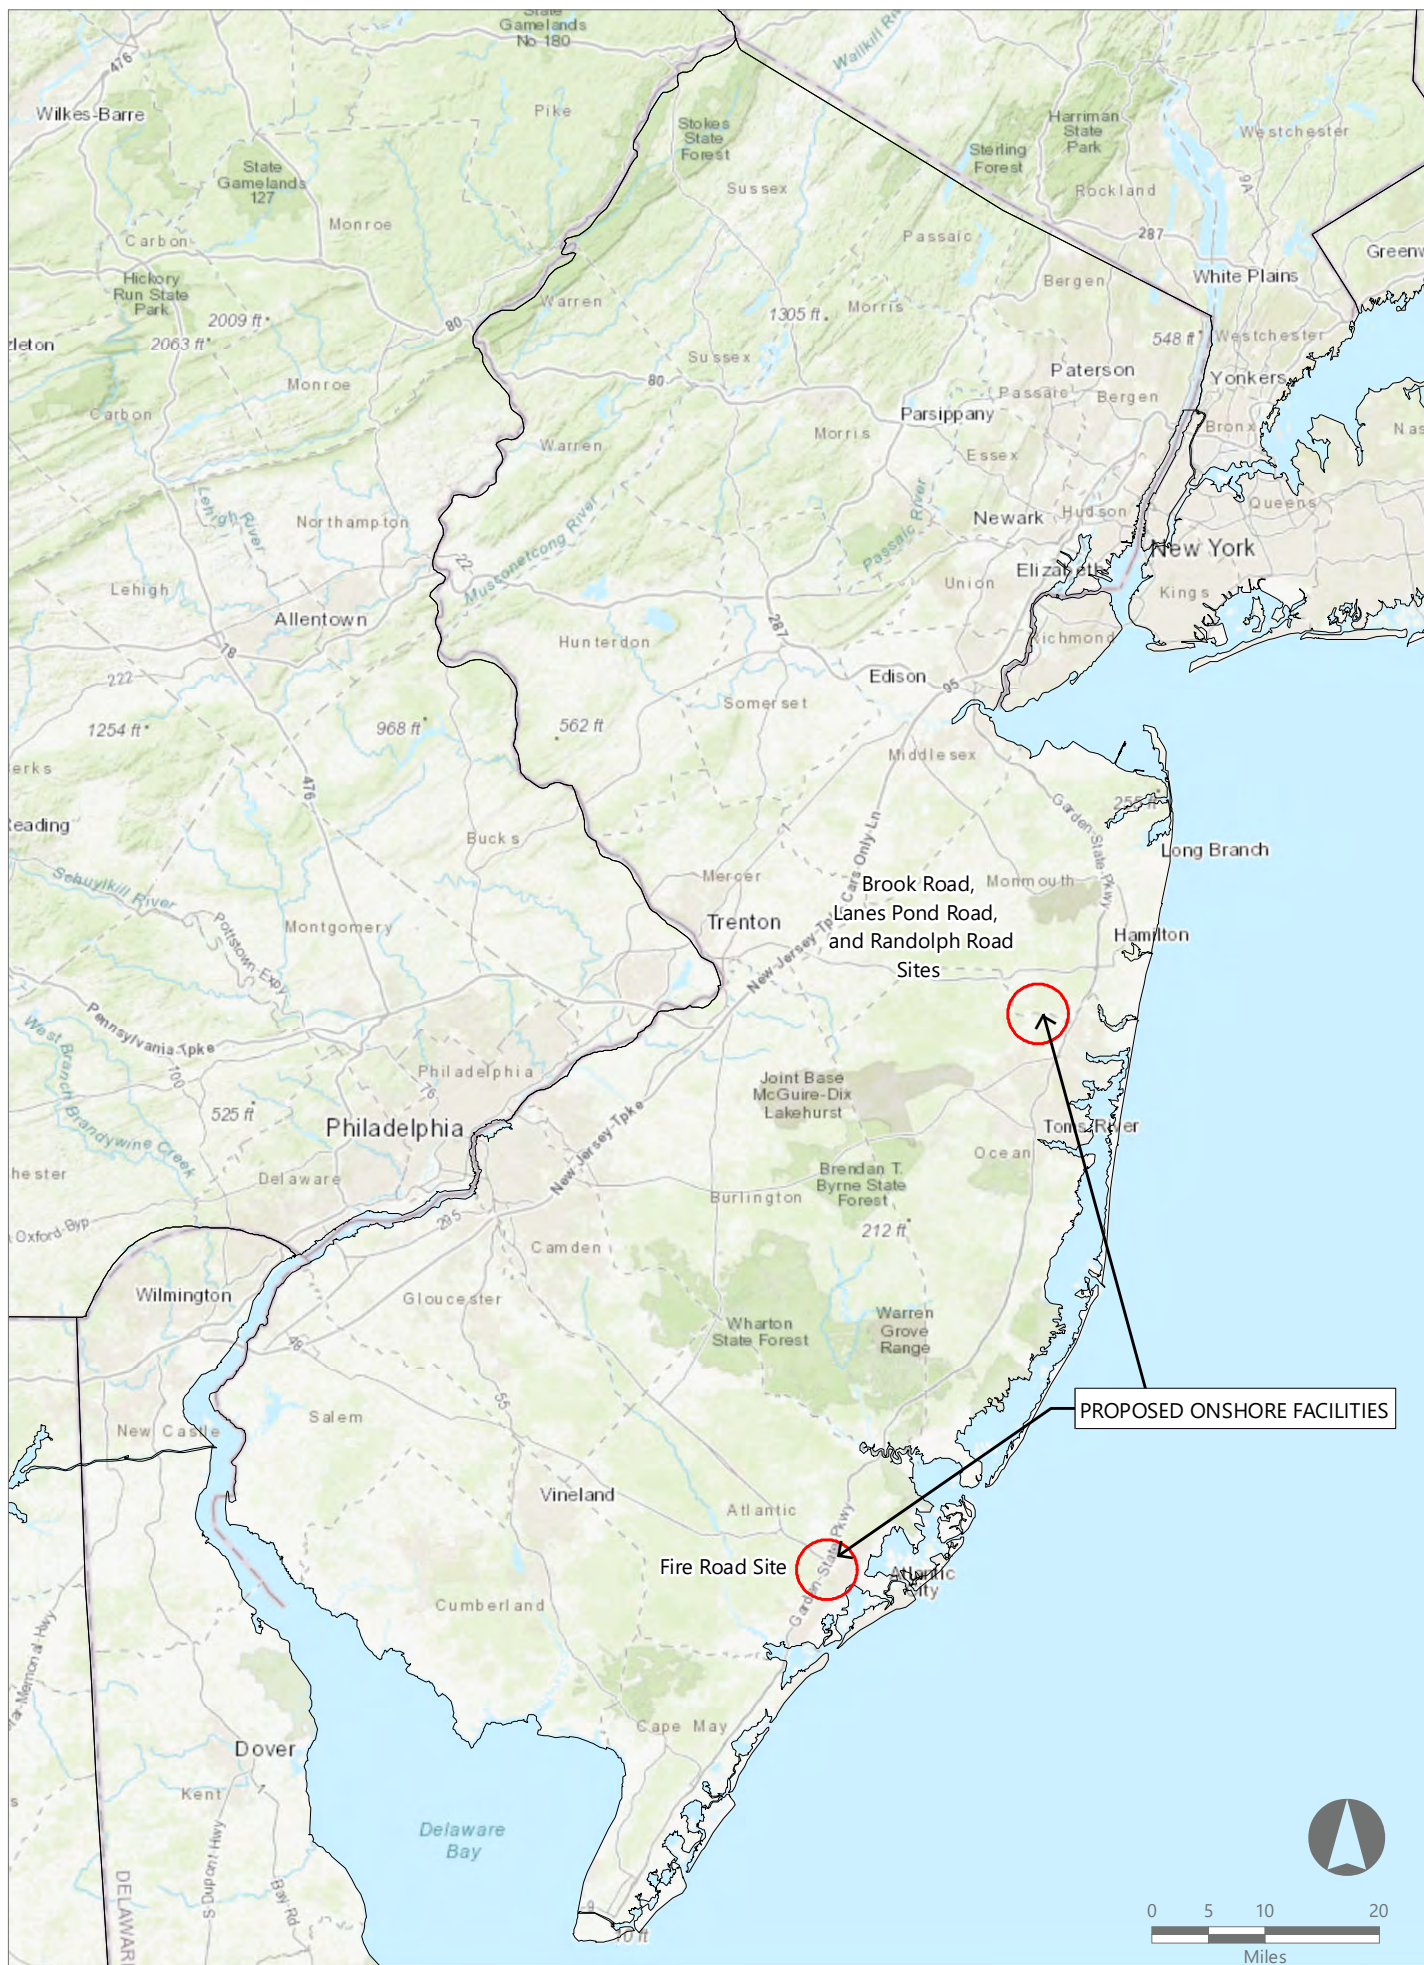

If HVDC is selected, the equipment and facilities installed at the site could include a valve hall, service building, transformers, an AC yard and a DC area, a reactor yard, valve cooling towers, AC filters, and a storage building. At each onshore HVDC converter station, the current will be converted from DC to AC and the voltage will be stepped up or stepped down to match the electrical grid voltage.

Atlantic Shores has identified potential locations for these Facilities (Figure 1.1-1), including the following:

- Three potential locations for the proposed Larrabee Onshore Substation and/or Converter Station:³

³ Atlantic Shores previously submitted a memorandum to BOEM in August 2022 with information on eight potential locations (Parcel Areas) for the proposed Larrabee Onshore Substation and/or Converter Station. Design decisions since the transmittal of that memorandum have resulted in the removal of six of the previously identified locations (Parcel Areas 1-6), and the addition of one location (Randolph Road/formerly Randolph Road option). The designations of the two retained locations (Parcel Areas 7/Binyan and 8/100 Acre) have been updated to the Lanes Pond Road Site and Brook Road Site options.

- The Lanes Pond Road Site (formerly Parcel Area 7 and the Binyan Site) is an approximately 16.3-acre (6.6-ha) parcel consisting of agricultural fields and wooded areas south of the intersection of Miller Road and Lanes Pond Road in Howell Township.
- The Brook Road Site (formerly Parcel Area 8 and the 100 Acre Site) is an approximately 99.4-acre (40.2-ha) combination of two parcels consisting primarily of forested uplands and some wetlands between Randolph Road and the Metedeconk River in Howell Township.
- The Randolph Road Site (formerly Randolph Road Site) is an approximately 24.6-acre (9.97-ha) combination of three parcels consisting of a steel fabrication facility with associated laydown yard, offices, and parking, as well as forested wetlands surrounding Dicks Brook. The site is located north of Randolph Road to the northeast of the existing Larrabee POI in Howell Township.
- The Fire Road Site located at approximately 3038 Fire Road, is situated on approximately 19.71 acres (7.98 ha) of currently wooded and overgrown lots in Egg Harbor Township.

1.3.3.1 Onshore Facility Siting

While both Project 1 and Project 2 will be electrically distinct from one another, the Projects require the ability to interconnect at two POIs to accommodate the maximum amount of electricity that could be generated by the Projects. Therefore, the Projects require two POIs and, consequently, two onshore interconnection cable routes and two landfall sites. To identify the locations of the Projects' onshore facilities, Atlantic Shores conducted an onshore routing assessment through an inter-related process that identified options for landfall sites and onshore interconnection cable routes to existing POIs. Identification of landfall sites and onshore interconnection cable routes in New Jersey is constrained by the density of development along the shorelines and built infrastructure inland. This siting must also account for the area required for horizontal directional drilling (HDD) staging areas as well as the physical dimensions required to install an underground transition vault that connects the export cables and the onshore interconnection cables.

1.3.3.2 Points of Interconnection

Five potential POIs within New Jersey (see Table 1.3-1) were identified based on their proximity to the coastline and their environmental and technical attributes (e.g., substation voltage, potential for expansion, upgrades required to accommodate the Projects' interconnection). These five POIs were used to evaluate potential onshore interconnection cable routes from the landfall sites to the POIs.

Table 1.3-2. Potential Points of Interconnection

Potential POIs	County
Larrabee	Monmouth
Cardiff	Atlantic
Lewis	Atlantic
Oyster Creek	Ocean
BL England	Cape May

1.3.3.3 Landfall Sites

Atlantic Shores conducted a siting evaluation of potential landfall sites that was largely based on parcel size, surrounding land use, and proximity to established linear development corridors (e.g., roadway and utility right-of-way [ROW]) that could serve as an onshore interconnection cable route. The specific siting criteria used to identify potential landfall sites included the following:

- **Technical considerations:**
 - The landfall sites require adequate open space onshore and in proximity to the coastline to accommodate the underground transition vaults and required HDD staging areas.
 - Landfall sites with offshore water depths that are deep enough to accommodate a cable laying vessel at the offshore HDD entrance/exit point are preferred.

- **Site characteristics:** The Projects require areas that are either undeveloped or consist of surface development (i.e., parking lots), without conflicting subsurface infrastructure.
- **Existing uses and sensitive areas:** Preferred landfall sites are not located proximate to residential communities and other sensitive receptors such as wildlife management areas, state parks, and other protected open spaces, which make up most of the open land along the New Jersey coast.

Based on these criteria, aerial photographs of the coastline were manually analyzed to determine candidate landfall sites. A total of 10 potential landfall sites were initially identified, as presented in Table 1.2-2 and shown on Figure 1.3-4.

Table 1.3-3. Landfall Sites

Landfall Site	Potential POI	Approximate Size	Latitude	Longitude
Wesley Lake	Larrabee	<1 acre (<0.004 [square kilometer] km ²)	40.218344	-74.004783
Monmouth	Larrabee, Oyster Creek	164 acres (0.66 km ²)	40.121597	-74.033785
Island Beach State Park	Larrabee, Oyster Creek	2,200 acres (8.9 km ²)	39.904109	-74.081359
Abbott Avenue	Larrabee, Oyster Creek	2 acres (0.008 km ²)	39.543841	-74.255182
Jeffrey Avenue	Larrabee, Oyster Creek	<1 acre (<0.004 km ²)	39.539932	-74.259552
Roosevelt Avenue	Larrabee, Oyster Creek	3 acres (0.01 km ²)	39.534552	-74.262262
North Atlantic City	Cardiff, Lewis	<1 acre (<0.004 km ²)	39.364038	-74.413007
Bader Airfield	Cardiff, Lewis	143 acres (0.58 km ²)	39.359757	-74.455573
Atlantic	Cardiff, Lewis	2 acres (0.008 km ²)	39.351952	-74.450009
Corson's Inlet	BL England	42 acres (0.17 km ²)	39.216859	-74.642799

1.3.3.4 Onshore Interconnection Routes

From each landfall site, Atlantic Shores conducted an iterative onshore interconnection cable routing assessment to each of the five POIs. The routing assessment was supported by aerial photography, publicly available Geographic Information Systems (GIS) environmental data, and baseline windshield surveys. Based on this routing analysis, 16 preliminary onshore interconnection cable routes were identified as shown in Figure 1.3-4.

A set of environmental and feasibility criteria were identified and weighted to establish and evaluate each onshore interconnection cable route. Route ranking was based on the following criteria:

- **Technical considerations:**
 - Shorter route lengths are preferred to reduce overall potential impacts and installation costs.
 - A lower number of hard route angles requiring a dead-end or corner transmission structure is preferred since hard route angles are more challenging and costly to construct.

- **Site characteristics:** Routes utilizing established ROWs for larger highways, state routes, existing transmission lines, or railroads are preferred because of the widespread development along the coast that prevents the establishment of a new ROW.
- **Existing uses and sensitive areas:**
 - Routes that avoid or minimize the distance of the onshore interconnection cable route in or within proximity to residential neighborhoods are preferred to reduce temporary, construction-related noise impacts.
 - Routes that minimize impacts to mapped threatened and endangered species habitat, tidelands, and wetlands are preferred.

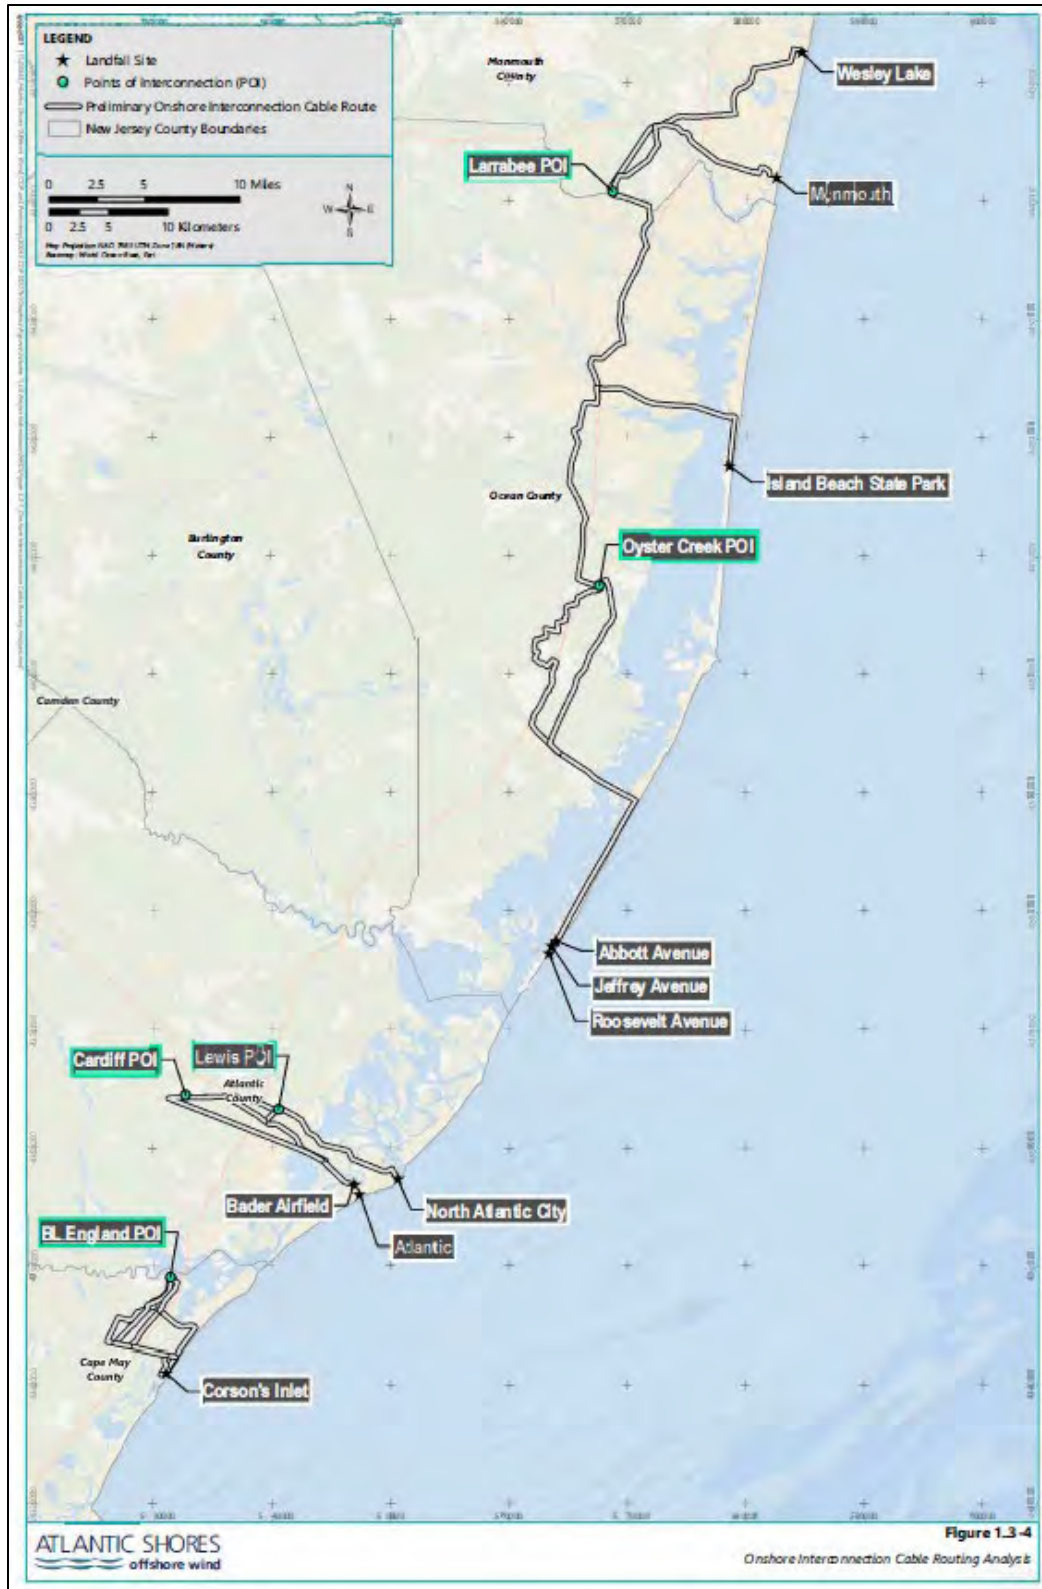

Figure 1.3-4. Onshore Interconnection Cable Routing Analysis

1.3.4 Description of the O&M Facility

Once operational, the Projects will be supported by a new Operations and Maintenance Facility (O&M Facility) that Atlantic Shores is proposing to establish in Atlantic City, New Jersey. The O&M Facility will be used by Atlantic Shores as the primary location for O&M operations including material storage, day-to-day management of inspection and maintenance activities, vehicle parking, marine coordination, vessel docking, and dispatching of technicians. The O&M Facility will be designed to provide a safe and efficient operational flow of activities and equipment, and will consist of the following:

- office space, including a server/IT room to house the Project's IT infrastructure, and a control room for surveillance and coordination of offshore activities and Project operations;
- warehouse space, including full-height access for deliveries and equipment storage, a temperature and humidity-controlled electrical storage room, and a lifting facility;
- harbor area and quayside, including but not limited to vessel mooring, unloading capabilities, a crane, berthing area, and emergency spill response equipment; and
- outdoor area and parking structure, including storage space for spare parts and materials.

To establish the O&M Facility, Atlantic Shores intends to purchase and develop the 1.22-acre (0.49 ha) shoreside parcel at 801 North Maryland Avenue in Atlantic City, New Jersey (see Figure 1.3-5). The current owner of the site is listed as Amoco Oil Company in New Jersey Department of Environmental Protection (NJDEP) documents; it is presumed that the parcel was formerly used for oil storage, vessel docking, or other port activities. Construction of the O&M Facility is expected to involve the construction of a new building and associated parking lot structure, repairs to any existing bulkheads/docks, installation of new dock facilities, and limited marine dredging. The associated parking structure and an outdoor area is proposed to occupy an approximately 2.0-acre (0.81-ha) portion of the existing state marina parking lot parcel northwest of the 801 North Maryland Avenue parcel (see Figure 1.3-5). Together, the 1.22-acre (0.49 ha) parcel for the planned O&M Facility and the 2.00-acre (0.81-ha) parking structure and outdoor area comprise the approximately 3.22-acre (1.30-ha) O&M Facility Site.

Figure 1.3-5 Regional O&M Facility Location

2.0 RESEARCH DESIGN

2.1 Objective

The purpose of this survey is to document aboveground historic properties located within the Projects' Area of Potential Effects (APE). In order to determine the presence of aboveground historic properties (both those previously inventoried in state databases and other public sources, as well as potential aboveground historic properties that have not been previously recorded), EDR undertook the following steps:

- Preparation of an historic context for the New Jersey shore, focusing on the areas where the offshore and onshore PAPEs are located, to determine the aboveground historic property types that may be present within the PAPEs;
- Development of an appropriate field survey methodology incorporating robust desktop analysis and review of previously identified as well as potential aboveground historic properties within the PAPE; and
- Field surveys to document the existing conditions, integrity, maritime setting, and views toward the Projects, of the properties identified as part of the desktop review and analysis.

In addition, a meeting was held with NJHPO on July 25, 2022, to discuss the above methodology for the identification of potential aboveground historic properties and to identify aboveground historic structures or typologies of particular state-wide interest that may not have been identified as part of the desktop analysis.

2.2 Methodology

2.2.1 Determining the Preliminary Area of Potential Effects

As stated above, this intensive-level architectural survey was completed in accordance with NJHPO's guidelines as a component of BOEM's Section 106 consultation for the Projects to identify aboveground historic properties that may be affected by the Projects. Under Section 106 of the NHPA, the federal agency in consultation with the SHPO determines the project's APE, defined as follows:

Area of potential effects means the geographic area or areas within which an undertaking may directly or indirectly cause alterations in the character or use of historic properties, if any such properties exist. The area of potential effects is influenced by the scale and nature of an undertaking and may be different for different kinds of effects caused by the undertaking (36 CFR 800.16(d)).

BOEM will determine the Projects' APE based on consultation with the NJHPO once BOEM has formally initiated NHPA Section 106 consultation for the Projects.

In 2020, the BOEM Office of Renewable Energy Programs issued updated *Guidelines for Providing Archaeological and Historic Property Information, Pursuant to 30 CFR 585*⁴ (BOEM, 2020), which states the following with regard to identification of historic properties:

BOEM requires detailed information regarding the nature and location of historic properties that may be affected by an applicant's proposed activities to conduct review of the plan under Section 106 of NHPA (54 U.S.C. § 306108). As defined in the regulations implementing Section 106 [36 CFR § 800.16 (1) (1)],

Historic property means any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion in, the National Register of Historic Places maintained by the Secretary of the Interior. This term includes artifacts, records, and remains that are related to and located within such properties. This term also includes properties of traditional religious and cultural importance to an Indian tribe or Native Hawaiian organization and that meet the National Register criteria (BOEM, 2020).

The APE for a project is determined by the responsible federal agency in consultation with relevant SHPOs. BOEM will determine the Projects' APE based on consultation with the NJHPO once BOEM has formally initiated NHPA Section 106 consultation for the Projects.⁵ As part of the intensive-level architectural survey, three different PAPEs were developed for the WTA, Onshore Facilities, and O&M Facility:

- **WTA PAPE:** In order to develop a PAPE for the WTA, EDR completed a viewshed analysis as part of the *Visual Impact Assessment for the Atlantic Shores Offshore Wind Project* (EDR, 2022) in area within 45.1 miles (72.6 km) of the Wind Turbine Area generated from lidar data,⁶ which includes the elevations of land features, buildings, trees, and other objects large enough to be resolved by lidar technology (EDR, 2022). A bare-earth digital elevation model (DEM), representing topography only, was also created in order to make corrections to the DSM and to the initial viewshed result. The DSM and DEM were both created with a horizontal resolution of 3 meters (m) to allow direct comparison of ground elevation with the elevation of surface features (such as buildings and vegetation). This analysis was used to determine the PAPE for the offshore components of the Projects. Based on ongoing consultations with BOEM, and as detailed in Section 2.3 of the offshore HRVEA (EDR, 2023a), Atlantic Shores elected to extend the 40-mile (64.4 km) WTA PAPE viewshed buffer to 45.1 miles (72.6 km) in order to assess the Projects'

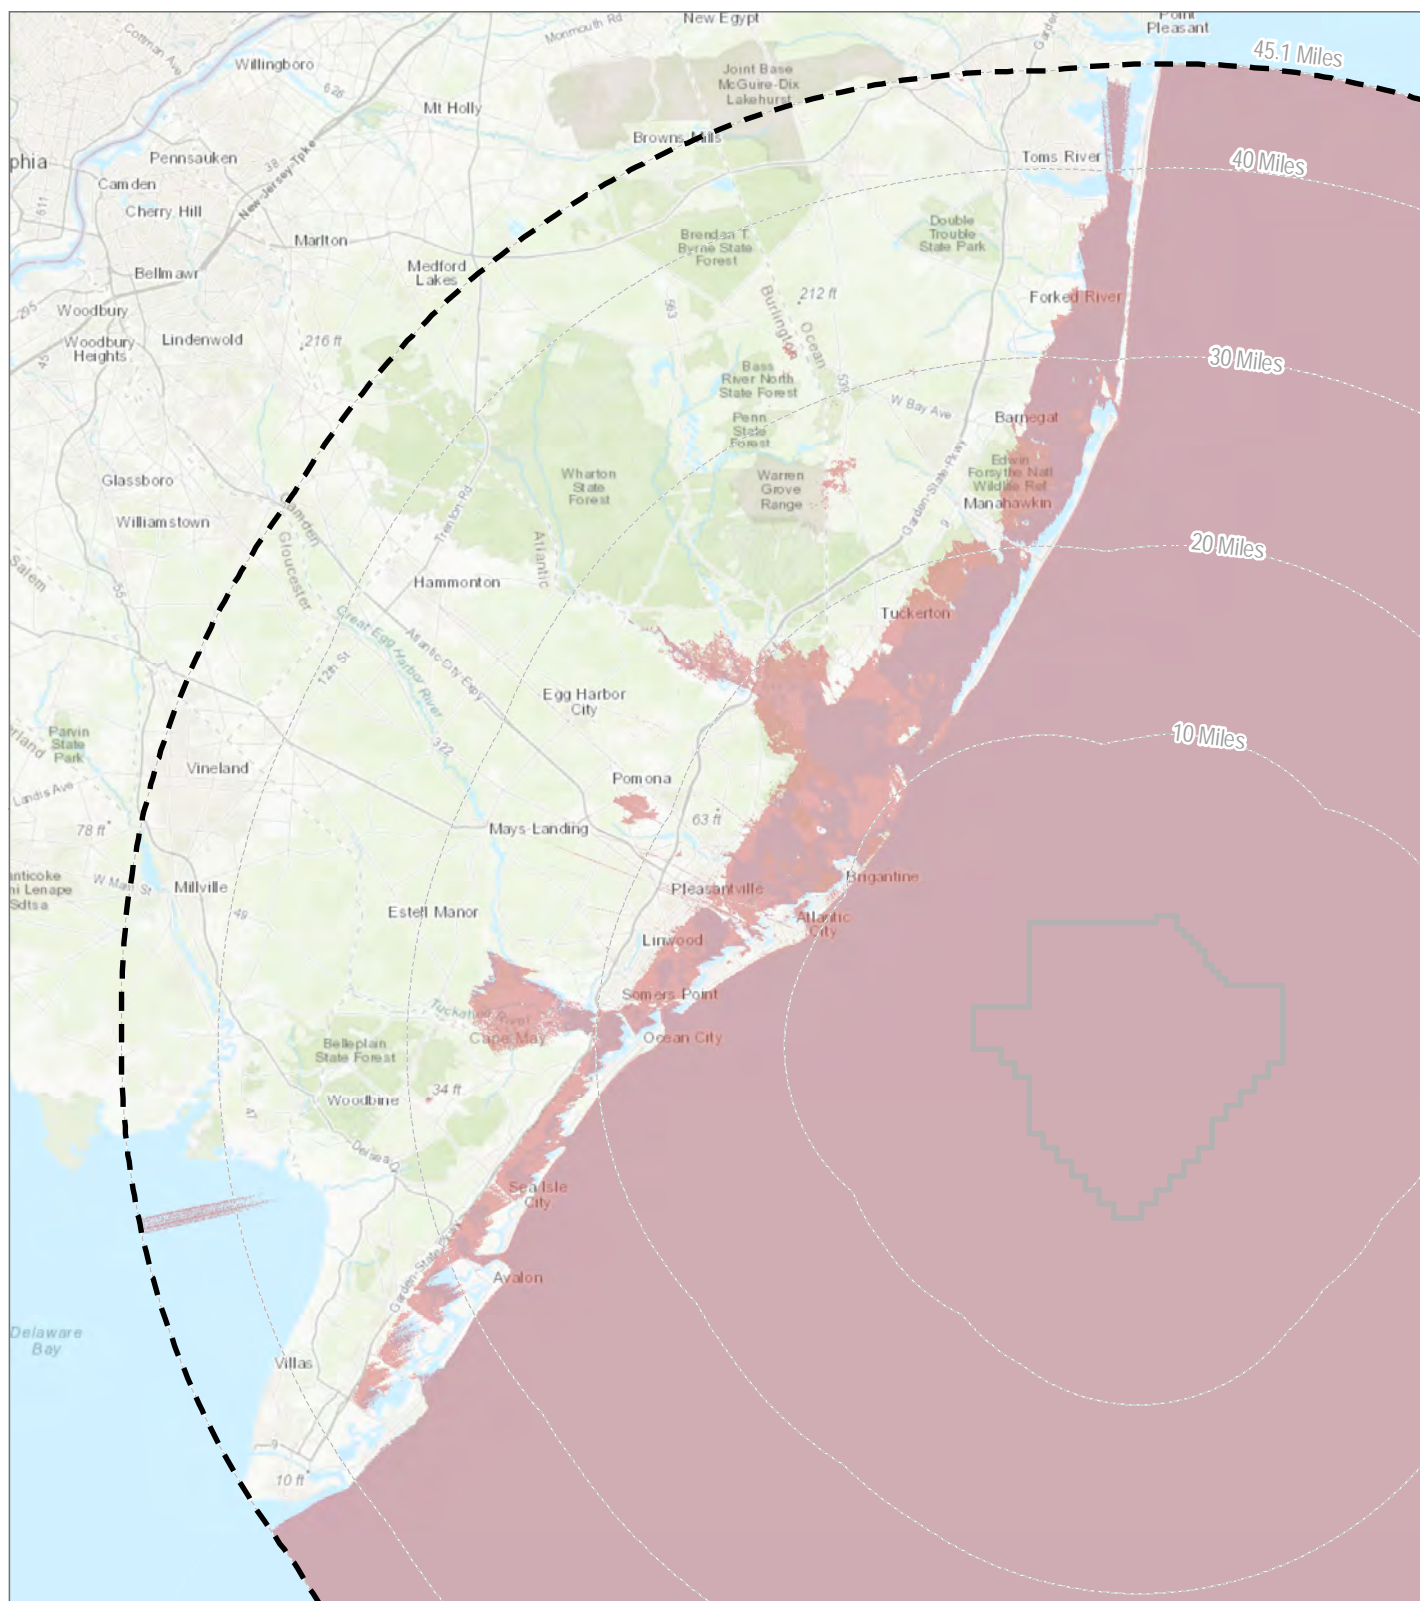

⁴ Available online at <https://www.boem.gov/sites/default/files/renewable-energy-program/Guidelines-for-Providing-Archaeological-and-Historic-Property-Information-Pursuant-to-30CFR585.pdf> (Accessed June 17, 2020).

⁵ Per 36 CFR § 800.3(c), federal agencies must consult with THPOs when determining the APE if historic properties within tribal lands (reservation or federal trust properties) may be affected by an undertaking.

⁶ Lidar data availability varies throughout the 45.1-mile (72.6 km) viewshed radius, requiring the use of more than one data source. The following four lidar datasets were incorporated into the DSM: NOAA 2014, USGS 2015, Cumberland County 2008, and American Recovery and Reinvestment Act (ARRA) 2010.

potential visual effects on aboveground historic properties located in Cape May, New Jersey. A map of the WTA PAPE is included as Figure 2.2-1.

Figure 2.2-1: Preliminary Area of Potential Effects - WTA

Atlantic Shores Offshore Wind Project

Outer Continental Shelf

-  Project Design Envelope
-  Preliminary Area of Potential Effects (PAPE)
-  45.1-Mile Viewshed Radius

- **Onshore Facilities PAPEs:** To determine the geographic areas of potential visibility (and therefore potential visual effects) of the onshore substation/converter station options, EDR conducted a lidar-based viewshed analysis. This analysis considers the height of proposed aboveground components of the Facility as anticipated by preliminary site plan designs along with a digital surface model (DSM) representing existing ground-level elevations, vegetation, and structures present in the VSA. The DSM was derived from 2014 and 2018 United States Geological Survey (USGS) lidar data with a horizontal resolution of one meter. A GIS analysis of this data was conducted to determine whether a direct line of sight would be available from ground level vantage points to the tallest proposed substation components. If a direct line of sight is available, the position (1-meter grid cell) is coded as visible. The viewshed calculations used sample points with an assigned height of 80 feet (24.4 m) to represent the lightning masts (the tallest proposed structures). Sample points were spaced 200 feet (61 m) apart in a grid pattern across each of the Sites. The sample point locations were determined using a preliminary site plan illustrating the proposed Larrabee Substation/Converter Station and Fire Road Substation/Converter Station layouts. The resulting geographic areas of potential visibility are referred to as the Onshore Facilities PAPEs. The Onshore Facilities PAPEs include all areas within 1 mile (1.6 km) of the proposed Facilities with potential visibility (based on a viewshed analysis) of the substation and/or converter station sites. Based on the relatively low-profile of the proposed onshore components, EDR defined a 1-mile (1.6 km) radius around the property boundary associated with the proposed onshore components within which to assess potential visual effects based on a viewshed analysis (the PAPE). A 1-mile (1.6 km) area for each of these Facilities is considered the maximum limit within which aboveground historic properties could be subject to adverse visual effects given size of the proposed Facilities and the screening provided by existing topography, building/structures and/or adjacent developed areas, and vegetation. While visibility beyond 1 mile (1.6 km) is possible, the nature and degree of potential visual impacts will be minimal beyond 1 mile (1.6 km) due to the density of existing modern development and infrastructure located within the PAPE. Maps of the Onshore Facilities PAPEs are included as Figure 2.2-2, 2.2-3, 2.2-4, and 2.2-5.

Figure 2.2-2. Lanes Brook Road Site PAPE

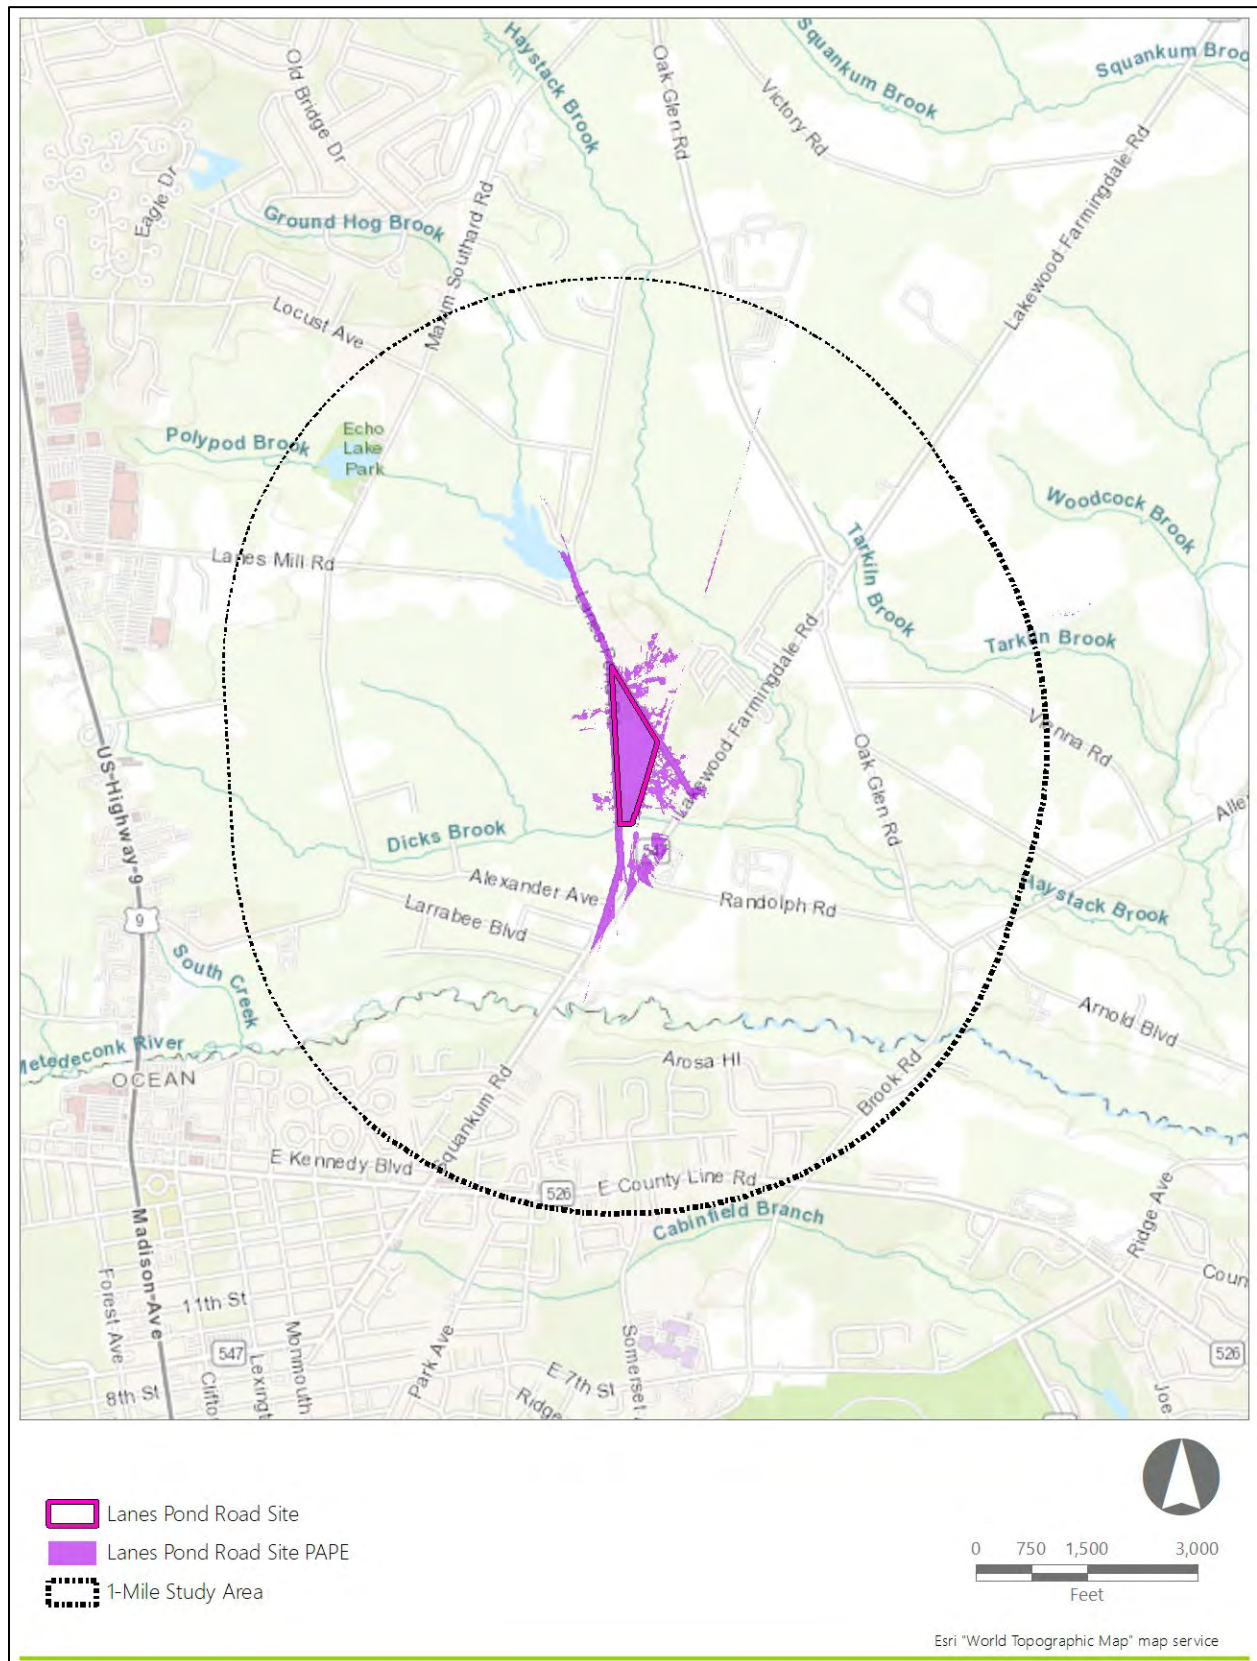

Figure 2.2-3. Brook Road Site PAPE

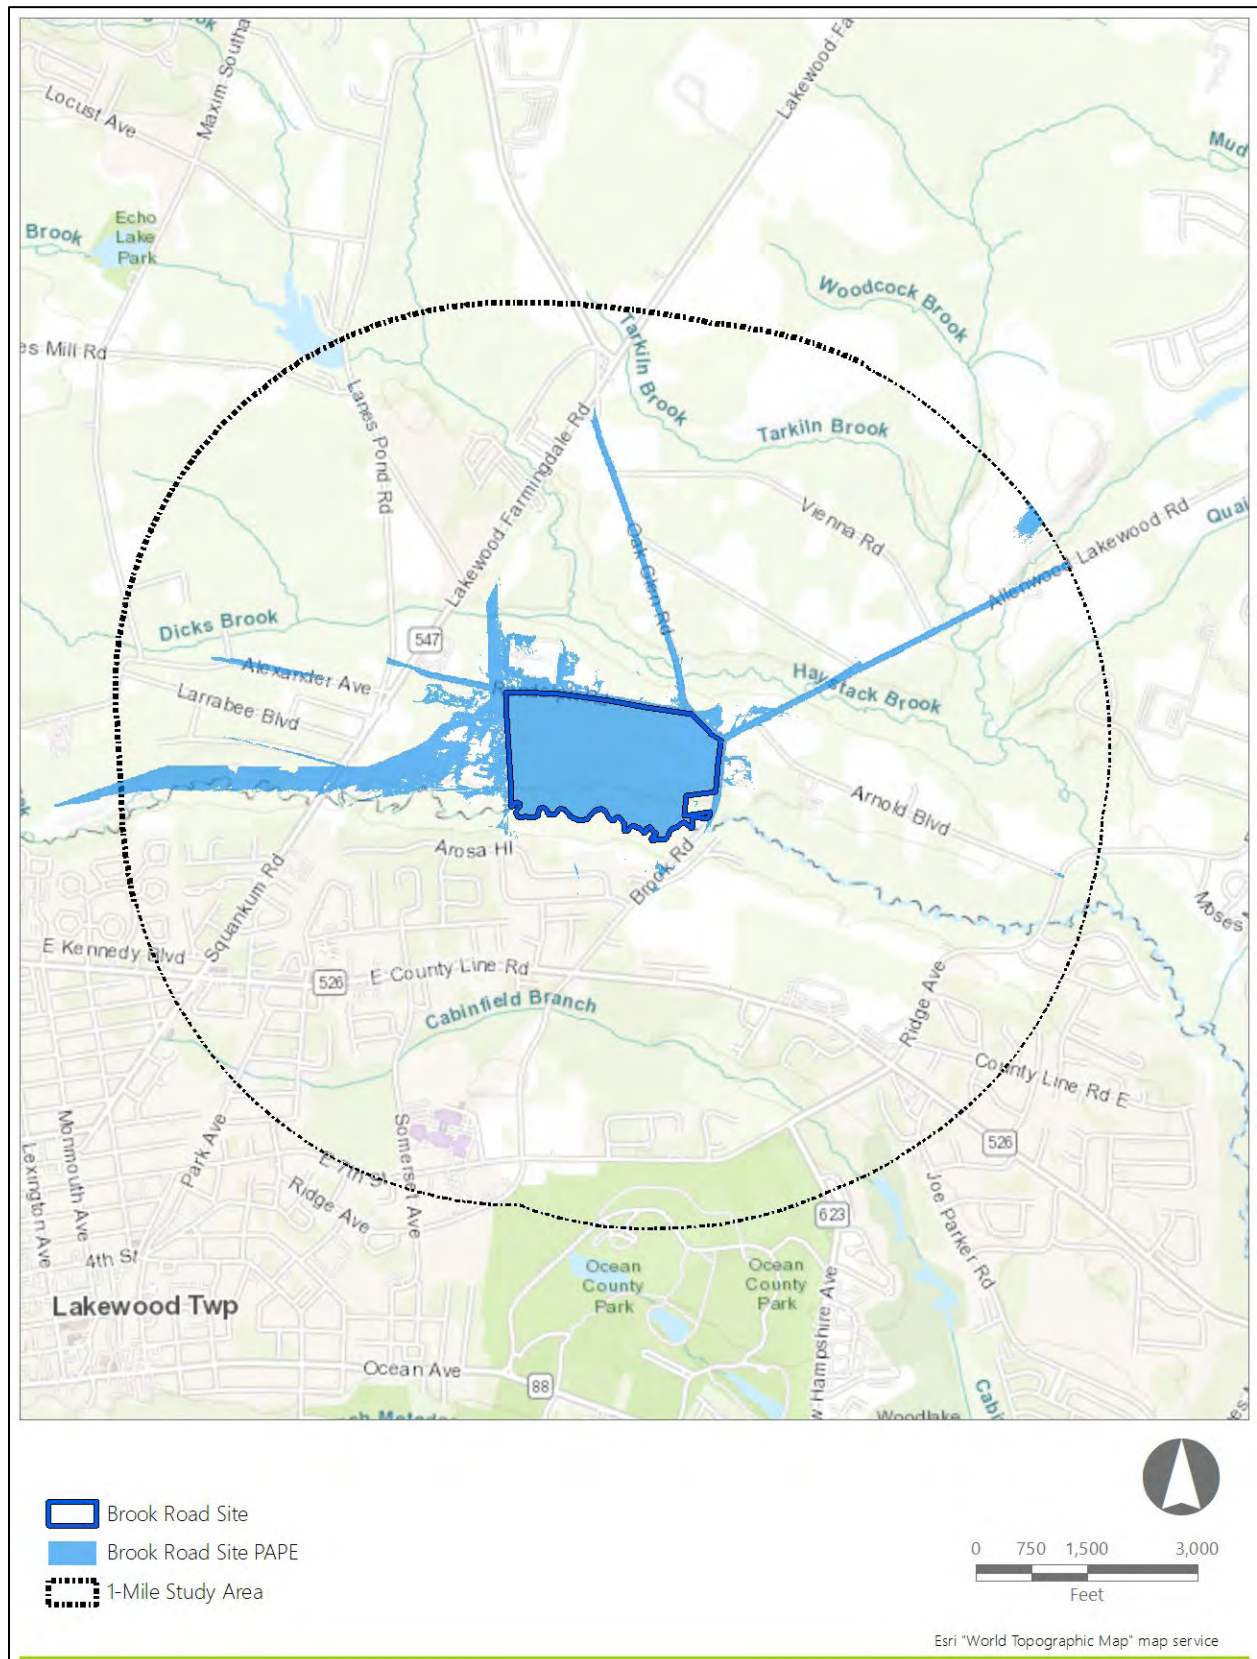

Figure 2.2-4. Randolph Road Site PAPE

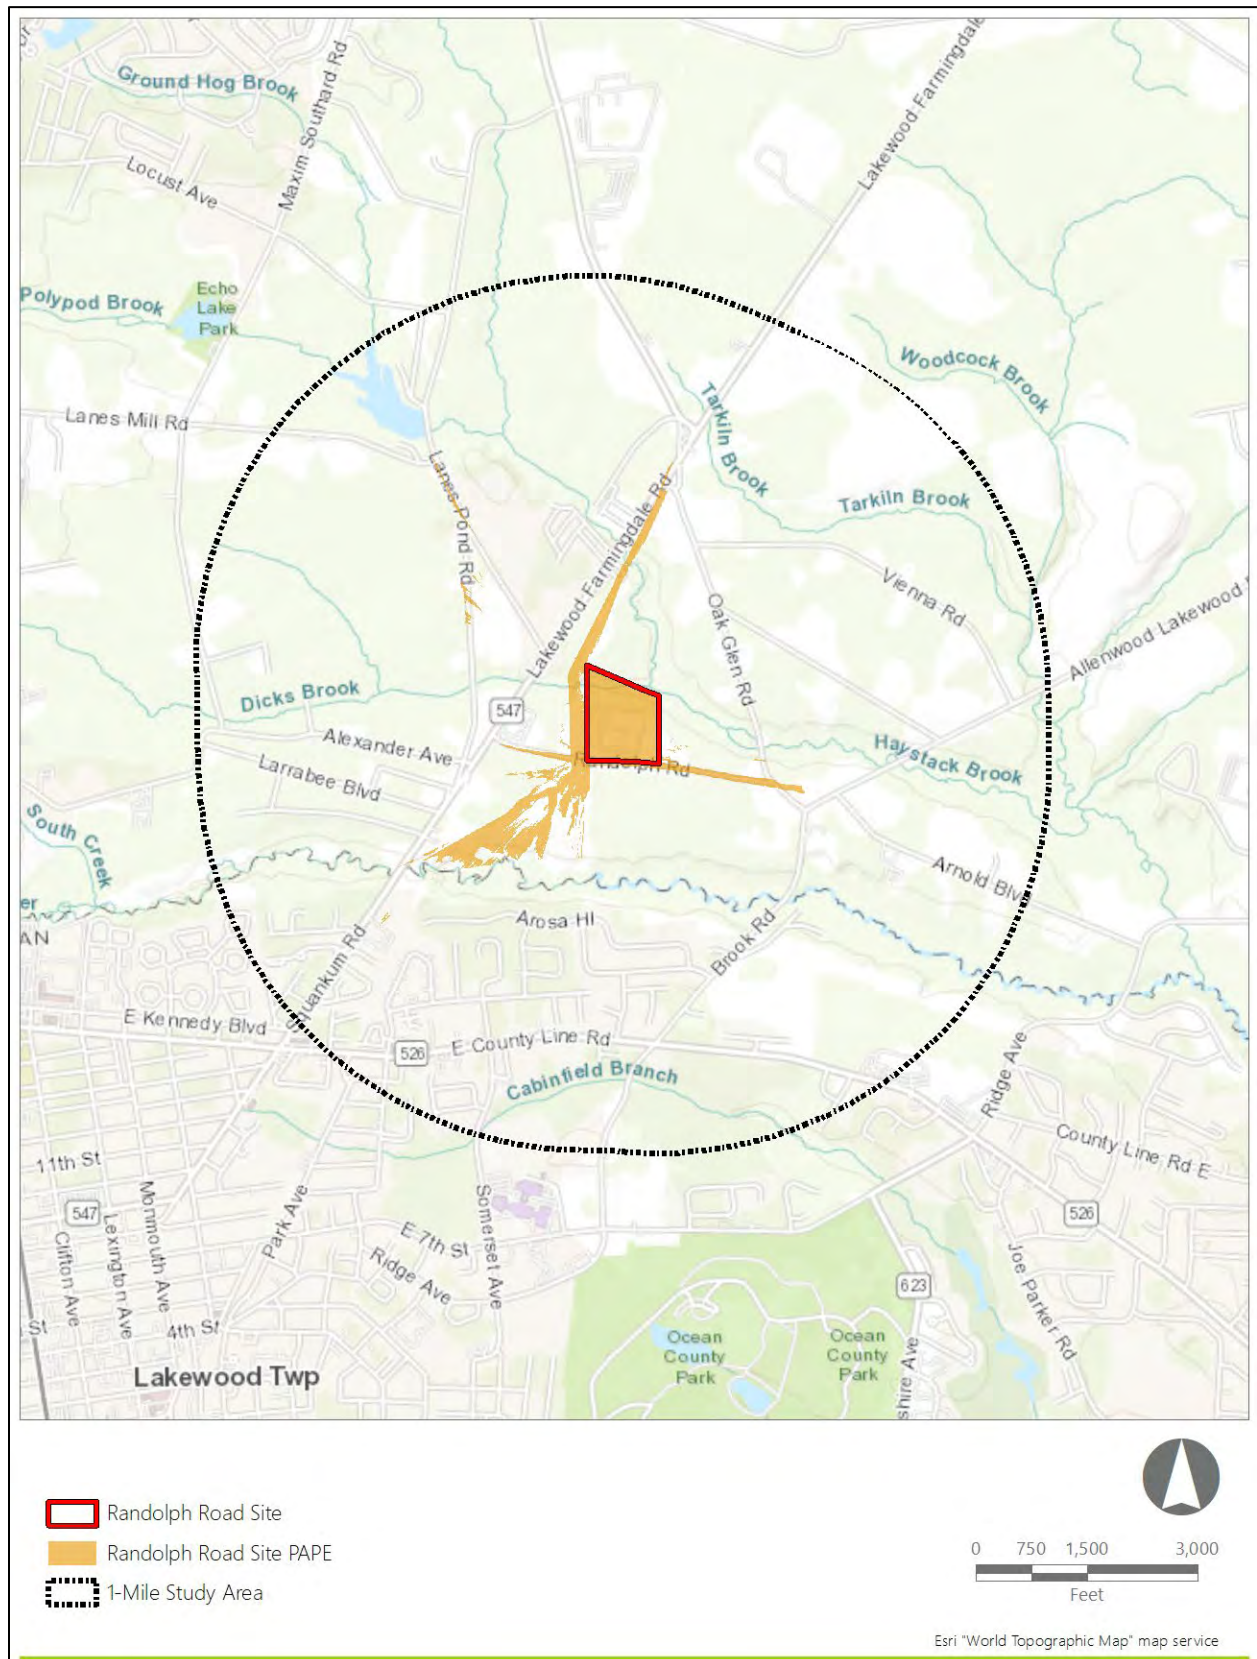

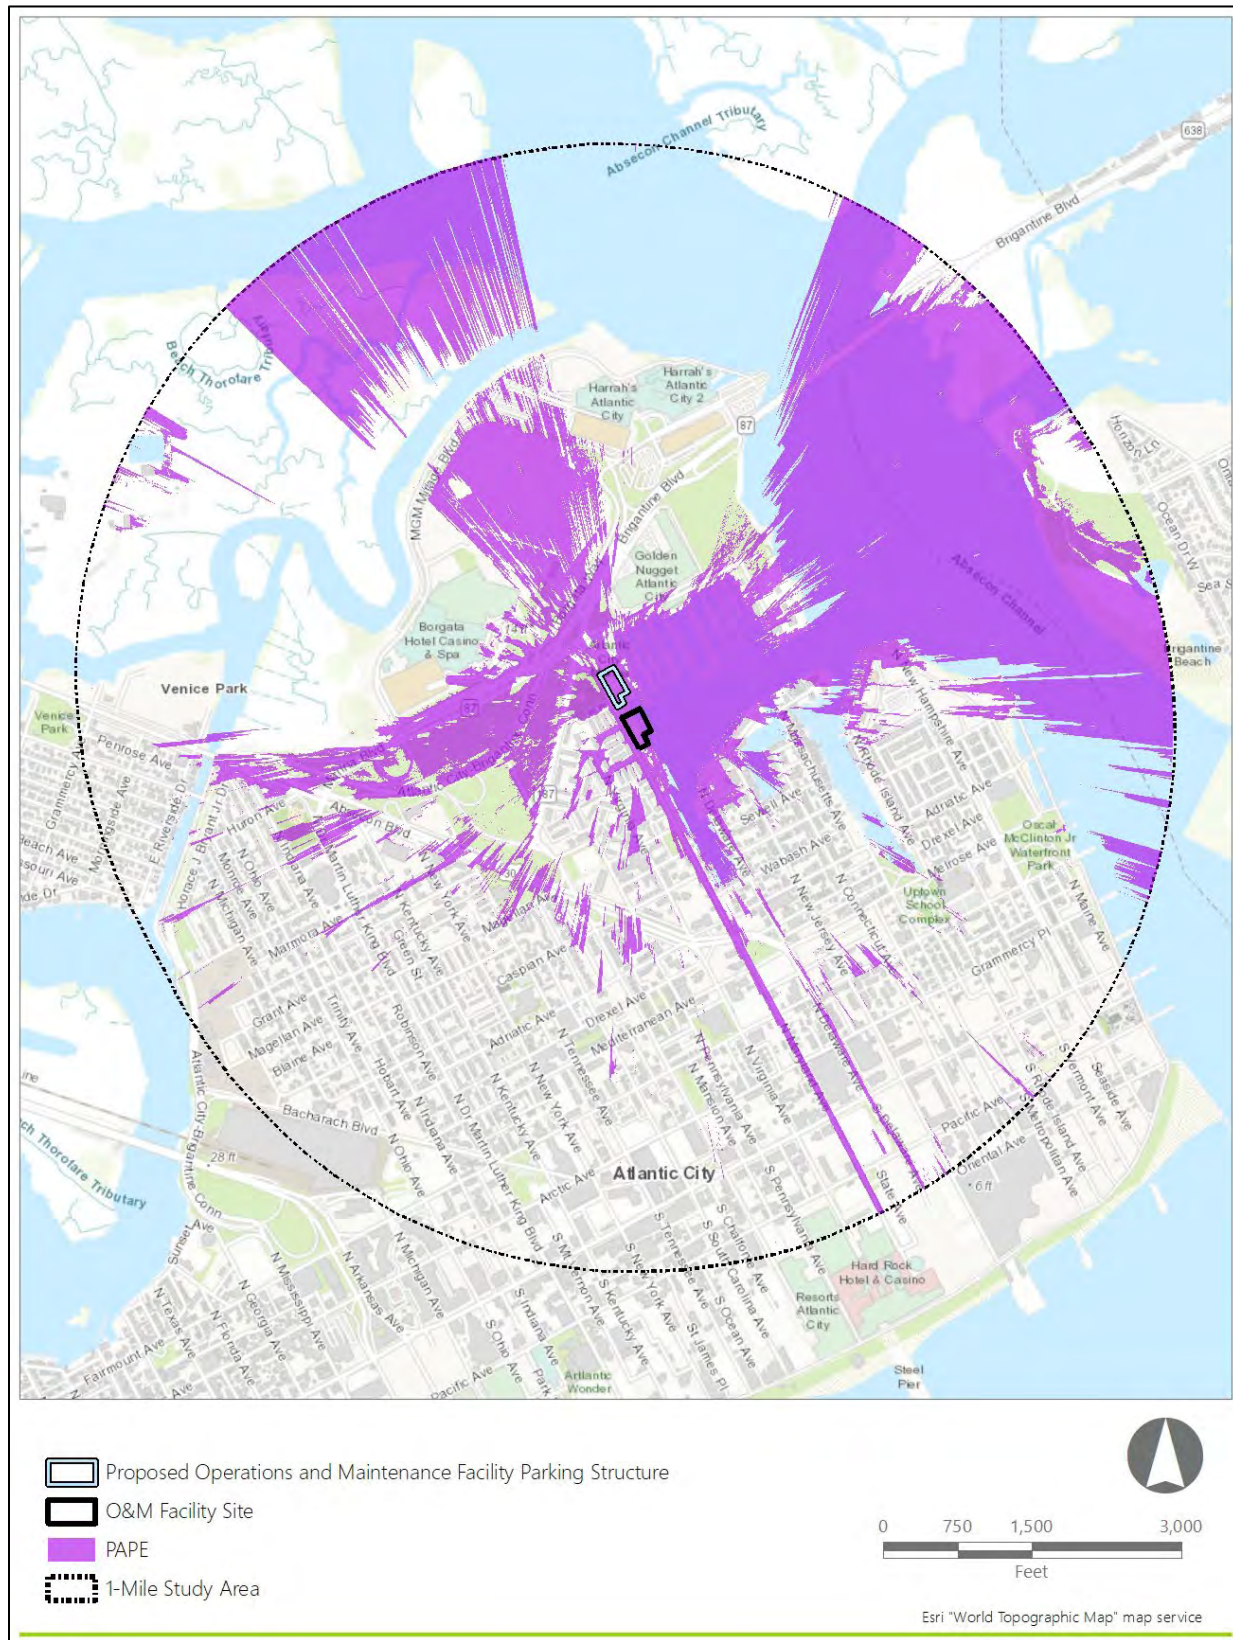

Figure 2.2-5. Fire Road Site PAPE

- **O&M Facility PAPE:** To determine the geographic areas of potential visibility (and therefore potential visual effects) of the O&M Facility, EDR conducted a lidar-based viewshed analysis. This analysis considers the height of the O&M Facility as anticipated by preliminary site plan designs along with a digital surface model (DSM) representing existing ground-level elevations, vegetation, and structures present in the VSA. The DSM was derived from 2014 and 2018 United States Geological Survey (USGS) lidar data with a horizontal resolution of one meter. A GIS analysis of this data was conducted to determine whether a direct line of sight would be available from ground level vantage points to the tallest proposed substation components. If a direct line of sight is available, the position (1-meter grid cell) is coded as visible. The viewshed calculations used sample points with an assigned height of 80 feet (24.4 m) to represent the lightning masts (the tallest proposed structures). Sample points were spaced 200 feet (61 m) apart in a grid pattern across each of the Sites. The resulting geographic areas of potential visibility are referred to as the PAPE. The O&M Facility PAPE includes all areas within 1 mile (1.6 km) of the proposed O&M Facility with potential visibility (based on a viewshed analysis) of the Facility. Based on the relatively low-profile of the O&M Facility, EDR defined a 1-mile (1.6 km) radius around the property boundary associated with the proposed onshore components within which to assess potential visual effects based on a viewshed analysis (the PAPE). A 1-mile (1.6 km) area is considered the maximum limit within which aboveground historic properties could be subject to adverse visual effects given size of the proposed O&M Facility and the screening provided by existing topography, building/structures and/or adjacent developed areas, and vegetation. While visibility beyond 1 mile (1.6 km) is possible, the nature and degree of potential visual impacts will be minimal beyond 1 mile (1.6 km) due to the density of existing modern development and infrastructure located within the O&M Facility PAPE. A map of the O&M Facility PAPE is included as Figure 2.2-5.

Figure 2.2-6. O&M Facility PAPE

2.2.2 Identification of Aboveground Historic Properties

In order to identify aboveground historic properties that could be affected by the Projects, EDR's Secretary of the Interior (SOI) Qualified Professionals first conducted a desktop review of the records of state and federal agencies, GIS databases, previous cultural resources surveys, local inventories, and historical collections to develop an inventory of previously identified aboveground historic properties within the PAPEs for the Projects.

Resources reviewed as part of this process included:

- The New Jersey Department of Environmental Protection (NJDEP) Look Up Cultural Resources Yourself (LUCY) website (NJDEP, 2022)
- The Atlantic County Division of Parks and Recreation Historical Sites webpage (Atlantic County, 2021)
- The Monmouth County Parks System (MCPS) Monmouth County Historic Sites Inventory (MCHSI) website (MCPS, 2021)
- Multiple Property Documentation Forms for relevant aboveground historic properties located within the PAPE
- Aboveground historic properties identified as part of studies conducted by BOEM in 2012 in order to prepare a GIS database of known aboveground cultural resources/historic properties that could be affected by the introduction of offshore energy facilities along the east coast of the United States⁷
- Municipal-level (i.e., county, town, city, or village) historian's offices and associated online databases
- Privately run local and regional historical societies.

In addition, EDR identified previously unreported aboveground properties that could be eligible for listing in the NRHP (i.e., properties that appear to be at least 40 years of age or more that have not been previously documented or included in existing historic databases) located within the PAPE. This process included the following:

- Identification of all structures within the PAPEs using the Microsoft United States Building Footprint database;
- Obtaining open parcel data and assessors' information to determine the age of the structures (if available) in order to identify all structures within the PAPEs that are 40 years of age or greater;

⁷ Klein, J.I., M.D. Harris, W.M. Tankersley, R. Meyer, G.C. Smith, and W.J. Chadwick. 2012. Evaluation of visual impact on cultural resources/historic properties: North Atlantic, Mid-Atlantic, South Atlantic, and Florida Straits. Volume I: Technical report of findings. U.S. Dept. of the Interior, Bureau of Ocean Energy Management, Gulf of Mexico OCS Region, New Orleans, LA. OCS Study BOEM 2012-006. 24 pp., and Klein, J.I., M.D. Harris, W.M. Tankersley, R. Meyer, G.C. Smith, and W.J. Chadwick. 2012. Evaluation of visual impact on cultural resources/historic properties: North Atlantic, Mid-Atlantic, South Atlantic, and Florida Straits. Volume II: Appendices. U.S. Dept. of the Interior, Bureau of Ocean Energy Management, Gulf of Mexico OCS Region, New Orleans, LA. OCS Study BOEM 2012-007. 10 appendices.

- Completion of a desktop analysis, including a review of recent aerial photographs, street views, and pictometry images (where available) to determine whether each structure is has been demolished or altered such that it would no longer meet the NRHP eligibility criteria (i.e., has lost integrity or is clearly not historically significant); and
- Delineation of potential historic districts for neighborhoods or clusters of properties consisting of similar style and construction dates, or otherwise linked by historic significance to review as part of field surveys.

2.2.3 NRHP Eligibility Criteria

Historically significant properties are defined herein to include buildings, districts, objects, structures and/or sites that have been listed in the NRHP, as well as those properties that are formally determined are eligible for listing in the NRHP. Criteria set forth by the National Park Service for evaluating historic properties (36 CFR 60.4) state that a historic building, district, object, structure, or site is significant (i.e., eligible for listing in the NRHP) if the property conveys (CFR, 2022; NPS, 1990):

The quality of significance in American history, architecture, archeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association and:

- (A) that are associated with events that have made a significant contribution to the broad patterns of our history; or*
- (B) that are associated with the lives of persons significant in our past; or*
- (C) that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or*
- (D) that have yielded, or may be likely to yield, information important in prehistory or history.*

2.2.4 Desktop Review and Field Survey

Based on the methodology described in Section 2.2.2, EDR identified potential aboveground historic properties in each of the PAPEs. EDR's SOI-qualified architectural historians initiated a desktop review of these parcels and removed properties from further consideration that were determined to be no longer extant. EDR further refined the list based on field observations as well as previous experience assessing visibility and potential impacts of offshore wind projects on aboveground historic properties. EDR's then evaluated the NRHP eligibility and integrity (location, setting, design, materials, workmanship, feeling, and association) of the remaining properties.

After the completion of the desktop review, field surveys were then conducted by SOI-qualified professionals. Survey fieldwork included systematically driving public roads within each PAPE to document the integrity and setting of previously identified aboveground historic properties (e.g., NRHP-listed and

eligible properties) and to evaluate the potential views of the Projects, as well as NRHP eligibility of the properties within the PAPE.

It is worth noting that field review conducted as part of the surveys confirmed that actual views toward the ocean and the Projects were significantly more limited than the viewshed analysis indicated. In particular, site visits to several inland potential aboveground historic properties in the WTA PAPE demonstrated that although the viewshed indicated potential views of the Projects along roadways and in clearings, actual visibility toward the water was significantly limited and, in many cases, completely screened by buildings, topography, and vegetation.

Additional information can be found in Section 2.2.5 and in COP Appendix II-N1 Onshore Interconnection Facilities HREA, COP Appendix II-N2 O&M Facility HREA, and COP Appendix II- Offshore Historic Resources HRVEA.

2.2.5 Preliminary Areas of Potential Effect

Based on the methodology described above, the results of the desktop and field review for each PAPE is described below.

2.2.5.1 WTA PAPE

Based on the initial identification of potential aboveground historic properties as described in Section 2.2.2, a total of 2,112 properties were identified within the WTA PAPE (see Attachment A: All Properties in the WTA PAPE). As described in Section 2.2.4, EDR's SOI-qualified architectural historians initiated a desktop review of these parcels and removed properties from further consideration that were determined to be no longer extant. This included a review of recent aerial photography, review of the LUCY database, and other resources mentioned above. Approximately 95 percent of the properties visited during the field surveys were removed from further consideration and analysis due to not meeting NRHP eligibility criteria and/or views of the ocean (and Projects) from these areas were screened by existing development and/or vegetation such that there was no potential for visibility or visual effects. In addition, several properties that were newly identified during the field surveys were determined based on desktop review to not be located in the WTA PAPE, and therefore were not considered for further analysis.

Screening provided by vegetation, structures, or other objects, especially from inland and developed areas, affect the potential visibility of the facility from a given property within the WTA PAPE. Considering the likelihood of limited inland visibility (particularly at great distances from the shoreline), the list of properties was further refined to include all previously determined NRHP-eligible or NRHP-listed properties within the PAPE, and all parcels with structures 40 years or older within 1500 feet of the ocean shoreline. Based on the above methodology, EDR then performed a desktop review of the remaining properties in the WTA PAPE (see Attachment B: All Properties Surveyed – WTA PAPE). As a result of this process, 527 properties were identified within the PAPE for further desktop review and analysis.

A summary of field survey results within the WTA PAPE is included in Section 4.1.

2.2.5.2 Onshore Facilities PAPEs

Based on the initial identification of potential aboveground historic properties as described in Section 2.2.2, a total of 66 properties were identified within the Onshore Facilities PAPEs. As described in Section 2.2.4, EDR's SOI-qualified architectural historians initiated a desktop review of these parcels and removed properties from further consideration that were determined to be no longer extant (see Attachment D: All Properties in the Onshore PAPEs). This included a review of recent aerial photography, review of the LUCY database, and other resources mentioned above. Two resources were determined to be no longer extant. Screening provided by vegetation, structures, or other objects, especially from inland and developed areas, affect the potential visibility of the Facilities from a given property within the Onshore Facilities PAPEs. EDR further refined the list of potential aboveground historic properties based on field observations as well as previous experience assessing visibility and potential impacts of proposed facilities, the list of properties was further refined to include all previously determined NRHP-eligible or NRHP-listed properties within the Onshore Facilities PAPEs, and all properties with 5 percent or more visibility of the proposed Facilities. As a result of this process, 18 properties were identified within the 1-mile (1.6 km) viewshed buffer and Onshore Facilities PAPEs for further desktop review and analysis (see Attachment E: All Properties Surveyed – Onshore Facilities PAPEs).

A summary of field survey results within the Onshore Facilities PAPEs is included in Section 4.2.

2.2.5.3 O&M Facility PAPE

Based on the initial identification of potential aboveground historic properties as described in Section 2.2.2, a total of 275 properties were identified within the O&M Facility PAPE. As described in Section 2.2.4, EDR's SOI-qualified architectural historians initiated a desktop review of these properties and removed properties from further consideration that were determined to be no longer extant (see Attachment E: All Properties in the O&M Facility PAPE). This included a review of recent aerial photography, review of the LUCY database, and other resources mentioned above. Two resources were determined to be no longer extant. Screening provided by vegetation, structures, or other objects, especially from inland and developed areas, affect the potential visibility of the facility from a given property within the O&M Facility PAPE. EDR further refined the list of potential aboveground historic properties based on field observations as well as previous experience assessing visibility and potential impacts of proposed facilities, the list of properties was further refined to include all previously determined NRHP-eligible or NRHP-listed properties within the O&M Facility PAPE, and all properties with 5 percent or more visibility of the proposed O&M Facility. As a result of this process, 98 properties were identified within the 1-mile (1.6 km) viewshed buffer and O&M Facility PAPE for further desktop review and analysis (see Attachment H: All Properties Surveyed – O&M Facility PAPE).

A summary of field survey results within the O&M Facility PAPE is included in Section 4.3.

3.0 SETTING AND HISTORIC OVERVIEW OF THE PAPES

3.1 Historic Context – WTA PAPE

The New Jersey coast is approximately 130 miles (209 km) long and extends from Sandy Hook Bay in Monmouth County in the northern extent to Cape May, Cape May County in the south. The shore is defined by a series of barrier islands that shield the coast, mainland harbors, coastal lakes, and rivers in the interior. The PAPE is located within portions of Atlantic and Cape May counties which make up New Jersey's Southern Shore. The New Jersey shore has been affected by several millennia of sea level rise and a history of significant weather events that remake beaches, alter the barrier islands, and destroy man-made structures, making the waterfront areas into a landscape characterized by long-term, incremental change and more dramatic, episodic alterations.

3.1.1 Early Settlement

The New Jersey coast was originally the home of the Lenni-Lenape:

Commonly, referred to as the Delaware Indians by European emigrants, the Lenape lived in autonomous villages along New Jersey's various tributaries and back bays. These waterways acted as natural highways, traversable by small watercraft such as dug-out canoes. Led by local Sachems and Councils of Elders, these communities typically relied on hunting, fishing, gathering, and small-scale agriculture for survival (SEARCH, 2022).

Euro-American settlement along the coast began in earnest in the late seventeenth century. Somers Point, located in Atlantic County, southwest of Atlantic City on Great Egg Harbor Bay, is the oldest settlement in Atlantic County and was founded in 1693 when the Somers family established their plantation. Originally known as Somerset Plantation, Somers Point became a borough in 1866. Its location on Great Egg Harbor Bay led to it becoming a popular port of call, and its close location to the resort areas of Ocean City and Atlantic City prompted rapid residential and commercial development in the region (Somers Point, 2022). Considered the oldest building in Atlantic County, the NRHP-listed Somers Mansion (70000378) was in use by 1726 (Wilson, C.I., Jr., 1970a). The Somers Mansion, the 2.5-story brick home of Richard Somers (for whom Somers Point is named), is positioned on a hilltop overlooking the eponymous point with broad views of Egg Harbor. Its brick walls are laid in Flemish Bond, and it has a gambrel roof and is ringed by the stumps of timbers that supported a balcony that was added sometime after.

3.1.2 Maritime History

The economy of the New Jersey shore was defined by a mixture of agriculture and maritime trades with many farmers deriving a living from the sea. A group of towns in Atlantic County in the PAPE developed along the Shore Road which runs from the Great Egg Harbor River in Somers Point to the Mullica River in Galloway Township (Thompson, 1987). Shore Road dates to 1716 and was the first public road in Atlantic County (Willis et al., 1915). As noted by the Linwood Historic District (89000800) NRHP nomination:

These towns all have a history that includes the maritime trades. Although shipbuilding along the south Jersey shore never became a nationally important industry as it did in the major ports of

Boston and Philadelphia, many local men followed the sea. Fish and shellfish from Scull Bay and the Atlantic Ocean beyond also provided a livelihood for many residents of the Shore Road towns until well into the twentieth century (Thompson, 1987).

Shipbuilding in the region was at its height from approximately 1830 to 1880 (Willis et al., 1915). The village of Marshallville in Cape May County was an early shipbuilding and glassmaking community on the south bank of the Tuckahoe River. Its architecture is primarily Federal style with several brick buildings. As noted by the Marshallville Historic District (89002013) NRHP nomination:

Although wharf remains ... are the only visible evidence of [the maritime economy], the Stille House ... was the home of a shipbuilder, and the Captain Belford Smith House ... was the home of a ship captain. The types and numbers of ships built in the area are not fully understood, but a partial list of identified vessels includes the Ann M. (1828, possibly built in Tuckahoe), the R. L. Loper (1859), the W. R. Van Gilder (1862), and the Jennie (1887) (Albrecht, 1989).

The community of Tuckerton in Ocean County, identified by NJHPO as an NRHP-eligible historic district for its association with maritime history, is located inland between Pohatcong Lake, Tuckerton Creek, and Little Egg Harbor. While many modern writers refer to Tuckerton as the third designated Port of Entry by Congress in the 1780s, that is not strictly true. Congress designated multiple points of entry along the Atlantic coast, and in 1789, Tuckerton was designated a Port of Delivery for the Burlington district. Tuckerton was upgraded to an official Port of Entry in 1796 after the residents of Little Egg Harbor lobbied Congress for a separate district (Stemmer, 2022).

In the mid-nineteenth century, the federal government invested in a series of lighthouses along the New Jersey coast “so that in sailing the light of one is not lost till the next is in sight” (Princeton, 2022). The NRHP-listed Absecon Lighthouse (71000492) was constructed in 1856 under the direction of Lt. George Meade, who later commanded Union forces at the Battle of Gettysburg (Wilson, C.I., Jr., 1970b). Constructed of iron and brick, it rises 171 feet. The lighthouse was decommissioned in 1933 and was moved to its current location from its original site closer to the inlet. The NRHP-listed Cape May Lighthouse (73001090) was constructed by the Army Corps of Engineers between 1857 and 1859. The building is 157.5 feet tall, and the original cast iron spiral stairway is still intact and provides access to the lens chamber. Originally fired by oil in 1859, the light was automated in 1946 (Diller, 1973).

In 1874, Congress allocated funds for 41 life-saving stations along the New Jersey coast (Princeton, 2022). A total of 45 stations were established on the New Jersey coast and operated by the U.S. Life-Saving Service before the creation of the Coast Guard in 1915. Only 15 of these stations are still extant (York, 2011). The NRHP-eligible Little Egg Harbor U.S. Life-Saving Station #23 within the PAPE in Ocean County is a legacy of this era. The resource overlooks Great Bay and is located to the northwest of the Little Egg Inlet between Long Beach and North Brigantine. The station was initially constructed in 1937 and its location in proximity to the ocean was imperative for rescuers to reach nearby shipwrecks on the Atlantic Ocean. The facility currently houses the Rutgers University Mullica River Field Station (Heritage Association, 2021).

3.1.3 Transportation and Residential Development

Transportation to the coast was primarily by ship, but as the railroad expanded, vacation opportunities for people of modest means became accessible (Zerbe et al., 2004). The Camden & Atlantic Railroad line opened between Camden to Absecon Island in 1854, which contributed to the rapid development of Atlantic City. However, Salem and Cape May counties were slower to develop by comparison, as railroads did not arrive until after the end of the Civil War (NJHPO, 2013). The barrier islands began to see intense development during this period with the establishment of residential resort communities typically constructed by speculative developers. Some of the earliest communities established just inland along trade routes like the Shore Road were outstripped by vacation spots like Atlantic City (which saw some half a million visitors a year by the 1870s) (Thompson, 1989; Zerbe et al., 2004; Princeton, 2022). According to the NJHPO:

The first State highway system was enacted into law in 1917 and largely constructed during the ten years thereafter. ... As these highways were constructed, recreational opportunities widened. More areas of the Jersey shore came under development" (NJHPO, 2013). As the automobile took over as the driver of development, "the result was a new form of resort, one which anticipated Miami Beach as well as much of the remainder of the twentieth century New Jersey seashore development in its low density and wide streets (Thomas, 1986).

These developments are adjacent to, and offer clear views of, the ocean. Residential neighborhoods and commercial clusters were constructed to provide access to the nearby beach and ocean views. Consequently, for many aboveground historic properties of this type, a relationship with the Atlantic Ocean is essential to their historic integrity. These developments represent popular period styles (Stick, Queen Anne, Gothic Revival, and Colonial Revival) and building types (bungalow, foursquare). Many of these are loosely defined as cottages; wood shingle cladding is a substantive defining feature of many of these coastal houses. Located on the shore and within the PAPE, the NRHP-listed and eligible historic districts of Beach Haven (Ocean County), Bay Front (Somers Point, Atlantic County), Saint Leonard's Tract (Ventnor City, Atlantic County), and John Stafford (Ventnor City, Atlantic County) reflect the shift in the development along the coast driven by improved transportation networks and middle-class recreation.

The NRHP-listed John Stafford Historic District (88000723) is a district encompassing three residential blocks in the city of Ventnor. Bounded by Atlantic, Austin, and Vassar Avenues and the Boardwalk, the district comprises some 30 buildings. The residences within the district were built between 1914 and 1924 by the developer John Stafford and were designed by Philadelphia architects such as Frank Seeburger and J. Fletcher Street (Thomas, 1986).

The NRHP-eligible Saint Leonard's Tract Historic District is a grouping of approximately 250 residences constructed between 1906 and 1930. The district is located between the Atlantic Ocean and the Intercoastal Waterway with many residences having views of one or both bodies of water. The setting of the district on a coastal barrier and the presence of water views along the perimeter of the neighborhood are integral to its character and feeling. The Saint Leonard's Tract Historic District is significant as a

designed community with strict building requirements for its architecture. The St. Leonard's Land Company purchased the land in 1896 and designed the district in a grid pattern (The History Store, 1986).

3.1.4 Recreation

The New Jersey coast has a long history as a vacation spot and a place of recreation for dwellers of urban centers such as Philadelphia. As early as the 1760s, proprietors on Cape May could advertise to city dwellers that they could enjoy the sea shore, "where a number resort for health and bathing in the Water" (Zerbe et al., 2004). Due to its location on Delaware Bay and its proximity to Philadelphia, the city of Cape May was the first location within the PAPE to see substantial resort development. Designated a National Historic Landmark (NHL), today the Cape May Historic District (70000383) largely reflects a later period of resort development within the city. The district "has one of the largest collections of late nineteenth century frame buildings left in the United States...(and) contains over 600 summer houses, old hotels, and commercial structures that give it a homogeneous architectural character, a kind of textbook of vernacular American building" (Pitts, 1976).

Hotels figured prominently in resort development. Some, like the United States Hotel (no longer extant) which took up an entire city block in Atlantic City, were owned by railroad companies (Princeton, 2022). Most of the prominent nineteenth century waterfront hotels are no longer extant. However, later generations of resort hotel development remain and still retain commanding ocean views. The NRHP-eligible Ritz Carlton Hotel is an 18-story building clad in brick that opened in June 1921. Constructed with elements of the Beaux Arts style, the building was designed by New York City architect Sir Charles Wetmore and was a prominent hotel in Atlantic City in the 1920s. The hotel was one of several hotels converted into army barracks during World War II, and in 1969 was converted into apartments (ACFPL, 2022).

De facto segregation was in place in Atlantic City from the 1920s to the 1960s where the city's African American community, concentrated on the Northside, was forced to use only the Missouri Avenue Beach (HABS No. NJ-1161). Commonly known as "Chicken Bone Beach", it was located on city-owned land in front of Convention Hall and the Million Dollar Pier. A Black entertainment district developed in the Northside where prominent Black entertainers like Sammy Davis, Jr. performed at night clubs and then enjoyed bathing at the Missouri Avenue Beach with other African American vacationers (Bear, 2019; PBS, 2019; CBB 2022). In neighboring Brigantine City, the Brigantine Hotel, constructed in 1927 in the Art Deco style, was for a time a prominent desegregated hotel where both white and black guests could enjoy the associated beachfront. Purchased by the racially-integrated Peace Mission Movement led by the Black pastor Father Divine, the Brigantine for a brief time in the 1940s provided inexpensive lodging and meals, and beach access for its followers and interested guests of both races. Seen by many as a racially-integrated cult, the Mission encountered resistance in Brigantine City. Under pressure, the Mission sold the hotel to the Atlantic City-based Black beauty product magnate, Sara Washington Spencer, who kept the hotel and beach open to both Black and White guests (Roi, 1948; Schultz and Kelly, 2002; Lurie and Mappen, 2004).

3.1.5 Boardwalks

Historic properties like the NRHP-eligible Atlantic City Boardwalk Historic District reflect these resort communities' recreational connection to the water. Intended to prevent sand from being tracked into area businesses, the first iteration of a boardwalk was more appropriately called a "foot walk" and led from the beach to the business district of Atlantic City. In 1870, railroad conductor Alexander Boardman and hotelier Jacob Klein proposed an alternate design that would be the basis for the modern boardwalk. The design included wood planks arranged in a herringbone pattern with a concrete and steel substructure. As Atlantic City expanded and developed into the late nineteenth century, the boardwalk was reconstructed with more hotels, piers that housed carousels and dance floors, and electrical signs. Amusement piers were introduced to Atlantic City in the 1890s. These piers extended from the boardwalk into the ocean, and each offered unique entertainment options (Berberabe, 2021).

The boardwalks of New Jersey reached the pinnacle of their popularity in the 1920s with most communities undertaking continued upgrades and improvements. The Music Pier at Ocean City's boardwalk was opened in the summer of 1929. It is located on the southeast side of the boardwalk at Moorlyn Terrace. The pier extends approximately 218 feet over the beach and provides expansive views of the ocean from inside and outside of the building. It was constructed after the 1927 fire destroyed a large portion of the boardwalk, including businesses and nearby homes. The Spanish Colonial-style pier included a large concert hall and was used for conventions, bazaars, dances, and free summer concerts (Lilliefors and Lilliefors, 2006; Berberabe, 2021).

The Great Depression led to a downturn in visitation to the New Jersey Shore. The Great Atlantic Hurricane of 1944 also caused significant damage, particularly to beachside recreational properties like the boardwalks (Berberabe, 2021; Discover Seaside Heights, 2011). Resort communities enjoyed a postwar resurgence in popularity which was also helped by the completion of superhighways, most significantly the NRHP-eligible Garden State Parkway (1946-1957), which further linked the barrier island communities with distant urban centers. New accommodations for highway travelers changed some of the architectural character of the vacation spots. As the Motels of the Wildwoods Multiple Property Documentation Form (64500880) notes:

The architects and builders in The Wildwoods worked to bring the high-style architecture of Florida down to an "everyman's" level. ... Many of the most fantastical motels are constructed of simple concrete block walls and then use wood framing to create the modern appendages such as butterfly roofs, angled walls and porte-cocheres that match the stylistic designs conjured by the exotic names of the motels (Zerbe et al., 2004).

The Aloha is a late example of "Doo Wop" or "Populuxe" motels built in Wildwood during the 1950s and 1960s. It is located on the northwest side of John F. Kennedy Drive adjacent to the boardwalk and the Wildwood beach, though the constraints of its narrow lot required that it be oriented perpendicular to the waterfront. It has several of the defining characteristics of the type, including three stories, continuous porches with wide, overhanging eaves supported by exposed steel beams and metal railings, and a second-story sundeck positioned at a right angle to the building.

While the automobile initially brought more tourists to the area, the usage of a car rather than a train led to visitors opting to stay at the shore for days at a time rather than an entire week or longer. Additionally, as air travel became more accessible for more Americans, many opted to vacation in destinations farther south in the Carolinas and Florida (ACFLP, 2022; Berberabe, 2021; NJHPO, 2006).

As noted above, weather-related events have resulted in significant physical impacts to boardwalks and their surrounding buildings. Most recently, Hurricane Sandy in 2014 caused extensive damage to several of New Jersey's boardwalks. A third of the boardwalk at Ocean Grove was destroyed and Sea Bright's entire boardwalk was destroyed and rebuilt by volunteers. After the storm, Atlantic City undertook a \$34 million reinvestment campaign that included upgraded lighting, improvements to parks, and façade improvements for businesses (Urgo, 2015; Dube, 2016). Therefore, although the historic materials of boardwalks may have been replaced several times throughout their lifespan, New Jersey's boardwalks retain historic significance as a public gathering spot to take advantage of the maritime setting and location near and/or views of the water.

The historical significance of boardwalks is often rooted in their continuity of use as a focus for public recreation and may not be dependent on the integrity of materials and design for the boardwalk structures themselves, adjacent structures, or their visual settings. Despite the variability in historic integrity of boardwalks within the PAPE (as well as alterations to many of the buildings located along them), potential visual impacts to boardwalks resulting from the Projects have been identified as being of particular interest to the NJHPO. In a meeting with the NJHPO on July 25, 2022, boardwalks were discussed as being of elevated interest and increased potential for adverse visual effects due to being a historic public gathering place along the water.

3.1.6 Primary Seaside Communities Within the WTA PAPE

Although there are numerous smaller villages and population centers along the New Jersey shore with active economies tied to the water (through recreation, tourism, and other means), the primary seaside communities within the PAPE are Atlantic City, Ocean City, the Wildwoods, and Cape May. Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. Euro-American development on Absecon Island was slow in the early-to-mid eighteenth century as it was only accessible by boat. The Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century (Allaback and Milliken, 1995; ACFPL, 2022).

Ocean City is in Cape May County and is located in the northernmost part of Absecon Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. The area became known as Peck's Beach; it was used as a cattle-grazing area and people from the mainland would travel to the island for recreation. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort and sold commercial and residential lots for

development. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk (Ocean City, 2022; Allaback and Milliken, 1995).

Wildwood City is in Cape May County on the barrier island known as Five Mile Beach. In 1895, the Wildwood Beach Improvement Company was founded by the Baker Brothers which gave rise to Wildwood (Wildwood Crest Historical Society 2022). Officially incorporated in 1912, Wildwood City is known for its wide, white sand beaches, the widest on the Jersey Cape, and its boardwalk that stretches along the beach for more than a mile and a half (Cape May County, 2022a).

North Wildwood City is in Cape May County north of Wildwood City. The area was used as a fishing, pasturage, and whale processing locale during the seventeenth and eighteenth centuries and did not have any permanent settlement until the village of Anglesea was established by Swedish fishermen around 1870. In 1879, the Five Mile Beach Improvement Company purchased the village. A rail line was established between Cape May Courthouse and Anglesea in 1884, which made the island more accessible from the mainland. The community was renamed North Wildwood in 1906 (Zerbe et al., 2004; History of North Wildwood, 2022).

Cape May, located at the southernmost tip of New Jersey at Cape May Point, is known as the country's oldest seashore resort. Because of its location on Delaware Bay, Cape May was an early point of interest for the Dutch. They purchased from the Lenni-Lenape a tract of land four miles along the bay and 12 miles inland starting at Cape May Point to establish a colony on the Delaware River. In 1632, David Pieterse DeVries established a fishing and whaling village at Cape May. In the early nineteenth century, steamboat traffic on the Delaware River brought vacationers to Cape May laying the foundation for a long and flourishing history as a resort community. Today, the city of Cape May is known for its well-preserved collection of late Victorian architecture (Pitts, 1976).

3.2 Historic Context – Onshore Facilities PAPEs

Archives and repositories consulted during EDR's research for the Larrabee substation locations included the online digital collections of the Library of Congress, the State of New Jersey official website, David Rumsey Historical Map Collection, the Monmouth County Historic Inventory website, and the United States Geological Survey, and EDR's in-house collection of reference materials. Additionally, EDR reviewed the *History of Monmouth County, New Jersey* (Ellis, 1885), *History of New Jersey* (Meredith and Hood, 1921), the *Story of New Jersey's Civil Boundaries 1606-1968* (Snyder, 1969), for the historic context of the substation sites and PAPE.

The proposed Larrabee Substation/Converter station will be located in the Howell Township, Monmouth County, New Jersey (see Figure 3.2-1). Monmouth County's 665 square miles (1,722 sq km) are situated along the Jersey Shore south of New York Bay, and are divided into 53 municipal subdivisions, including townships, cities, towns, boroughs, and villages.

New Jersey has been the site of human occupation for at least 12,000 years. At the time of European first contact, Atlantic County, like most of New Jersey, was occupied by the Lenni Lenape people. The local

branch was the Unalachtigo Lenape, or the “people who live near the ocean” (Snyder, 1969). The first European voyagers included the Dutch, Finns, and Swedes, who founded competing trade settlements along the coast from present-day Cape May to Trenton. The Finnish and Swedish colonies, however, did not receive enough support from their respective home countries, and suffered from a lack of financial and human resources. In 1655, Peter Stuyvesant sent a fleet of Dutch ships to raid the Finnish and Swedish settlements, resulting in the Dutch taking over control of the area for New Netherland (Meredith and Hood, 1921; Snyder, 1969).

The New Jersey colonies came under English control when the Dutch were defeated in 1664. For the next century, emigres from Holland, Huguenots from France, and Scots, among others, made New Jersey their home. During this early colonial period, the colony was split into two halves, East and West Jersey. In 1686, the area comprising Egg Harbor Township was located in Gloucester County in West Jersey. Gloucester County split from Burlington County. In 1693, Great Egg Harbor Township, or simply Egg Harbor, was formed. During the American Revolution, southern New Jersey was the site of many battles. For four months in 1783, the City of Princeton served as the United States’ capital (Meredith and Hood, 1921; Snyder, 1969).

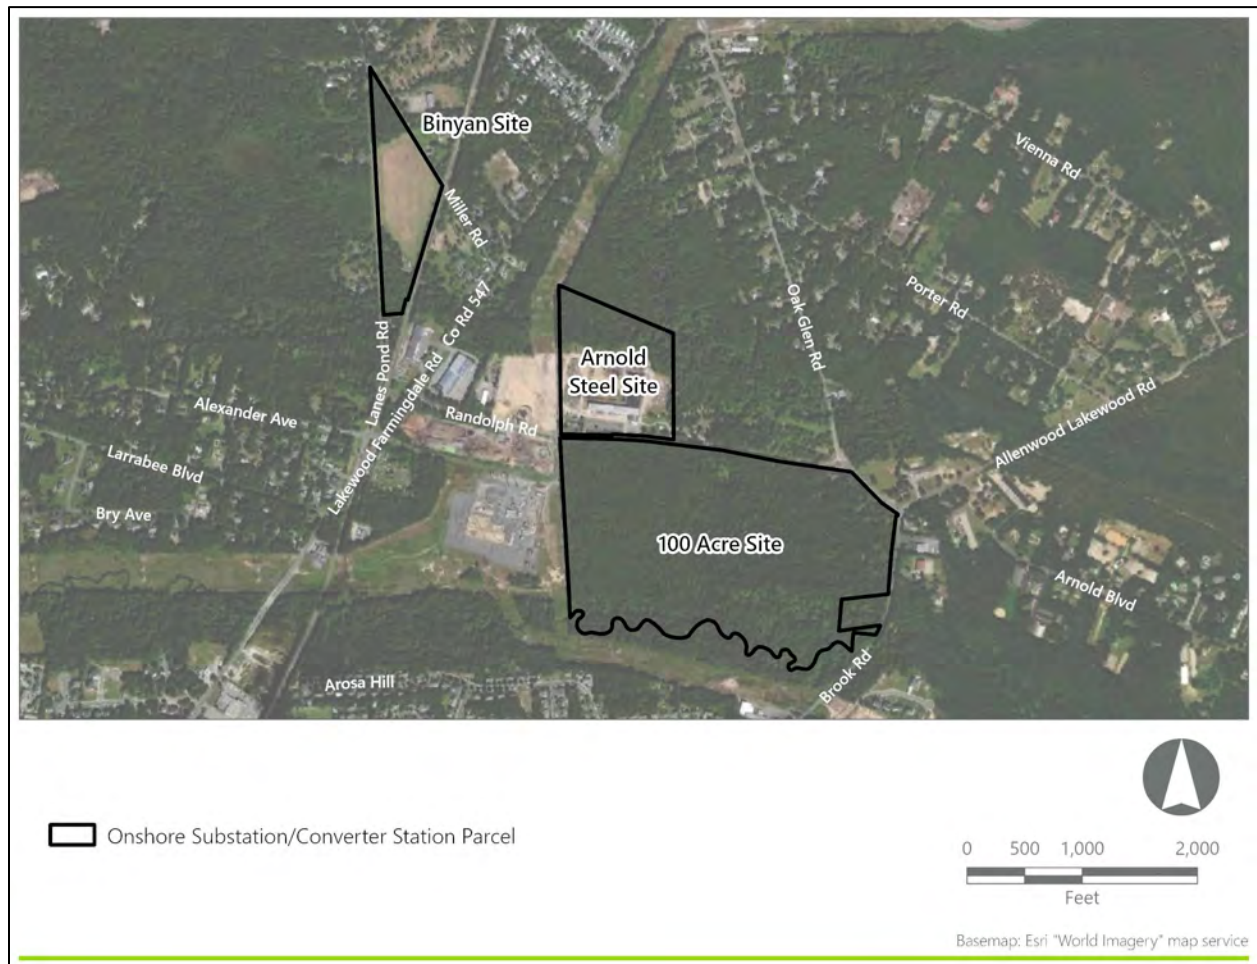

English colonial officials formed Monmouth County in 1683 in the East Jersey province. English Quakers formed a significant share of early Euro-American settlers in the county, while bands of Lenni Lenape continued to dwell in the region and maintained trading relationships with Europeans (Ellis, 1885; Salter, 1890). Colonizing Euro-Americans largely concentrated economic development of the region on clearing pitch pine timber for lumber and producing tar and turpentine for the maritime industry and subsequently developed cleared areas for agricultural and livestock grazing land in favorable soil conditions (Parsons, ed., 1928). The Euro-American population of Monmouth County remained relatively low compared to more intensively developed areas in the Hudson and Delaware River valleys but steadily grew into the nineteenth century with a focus on agriculture and light industry, such as grist and saw milling on suitable streams and rivers.

Howell Township was formed in 1801 from a subdivision of Shrewsbury Township. By 1832 the county had a modest commercial economy consisting of 17 mills, two distilleries, and a furnace (Ellis, 1885). The township was itself subdivided three times in the mid-nineteenth century. The production of pig iron was a major industry in Monmouth County, with over 500 workers employed at the Allaire Works on the Manansquan River between 1821 and 1846 (Morrison, 1950). In 1850, Ocean County was partitioned from Monmouth County (OCCHC, 2020). In 1853, a rail line was constructed which connected Camden with points in Monmouth County, and by 1860 rail lines had successfully linked most areas of the state (Morrison, 1950).

At the turn of the twentieth century, immigration from Europe increased dramatically, doubling the population of New Jersey, with many new arrivals settling in Monmouth County. While Wall and Howell Townships remained largely agricultural into the twentieth century, rail connections with larger urban areas and later improved roadways for automobiles in the twentieth century led to the growth of seaside communities in Monmouth County that were increasingly not connected with local farming or industry (Parsons, ed. 1928). Chemical and electronics manufacturing expanded significantly during the Second World War and afterwards (Monmouth County Planning, 2016). Monmouth and Ocean Counties followed

the national trends of suburbanization, and after the construction of the Garden State Parkway, population and development expanded quickly. Today Monmouth County is one of the wealthiest counties in the United States, benefiting from its legacy of manufacturing, while Ocean County has remained the fastest growing county in New Jersey for much of the past 60 years (New Jersey, 2020; OCCHC, 2020).

Figure 3.2-1. Proposed Larrabee Substation/Converter Station Locations.

3.2.1 The Lanes Pond Road Site

3.2.1.1 Existing Conditions

The Lanes Pond Road Site, currently consisting of managed agricultural land and mixed forest, is an approximately 16.3-acre parcel north-northwest of the existing Larrabee substation (see Figure 3.2-2). It is bordered by Lanes Pond Road to the west, Miller Road to the north, the New Jersey Southern rail corridor to the east, and a residence to the south.

Figure 3.2-2. Lanes Pond Road Site overview. The view from Lanes Pond Road showing the agricultural hay field. View to the east.

3.2.1.2 Visual Setting

The Lanes Pond Road Site is located in a predominantly forested area with light density residential, industrial and agricultural properties. A few residences are located to the west of the site along Lanes Pond Road, with dense forestation further west. To the north of the site are scattered residences and dense forest, as well as Lake Louise. Located to the east across Miller Road are residences, agricultural land, the New Jersey Southern Railroad Historic District, and two mobile home developments, as well as dense forestation. Finally, to the south of the site are a few industrial properties, residences, and forest land.

3.2.1.3 History of the Site

The Lanes Pond Road Site has been vacant land since at least 1930, when historic aerials show the property as agricultural fields. Based on a review of historic aerials and maps, the northern portion of the property near the intersection of Lanes Pond and Miller Roads has been wooded since at least 1930, the middle portion of the property remains open fields, and the southern portion has been wooded since approximately 1972 (Historic Aerials, 2022).

The vacant land of the Lanes Pond Road Site is not associated with any event or person, nor does it have the potential to yield information important in history or prehistory; therefore, the property does not meet the criteria for listing in the NRHP.

3.2.2 The Randolph Road Site

3.2.2.1 Existing Conditions

The Randolph Road Site is an approximately 24.7-acre parcel northeast of the existing Larrabee substation. The Randolph Road option is made up of three parcels (Parcel ID's 1321_5_3 and 1321_5_2) and is currently a steel fabrication facility with associated laydown yard, offices, and parking, as well as forested wetlands surrounding Dicks Brook (see Figure 3.2-3).

Figure 3.2-3. The Randolph Road option overview. View of the steel fabricator facility from Randolph Road. View to the north.

3.2.2.2 Visual Setting

The Randolph Road site is located in a predominantly wooded area, with dense forestation to the immediate north, east, and south (see Figure 3.2-4). A transmission line is located directly west of the site. Low density residential development is located to the northeast and a topsoil distributor, and a substation are located to the southwest. Low density residential development and scattered commercial development are located to the west.

Figure 3.2-4. View of the adjacent transmission line and the Material Transport Group, the topsoil distributor, on Randolph Road. View to the south.

3.2.2.3 History of the Site

The property was forest land from as early as 1930. Between 1947 and 1953 the land was cleared and divided into the present-day parcels. By 1956 two large structures, possibly barns, and a few smaller structures were constructed on the property. By 1979 the Randolph Road facility has been constructed, replacing one of the large structures. Multiple additions are added to the property between 1979 and 1995 (Historic Aerials, 2022).

The extant structures on the Randolph Road Site are not architecturally significant, nor are they associated with any event or person. The structures do not have the potential to yield information important in history or prehistory; therefore, the property does not meet the criteria for listing in the NRHP.

3.2.3 *The Brook Road Site*

3.2.3.1 Existing Conditions

The Brook Road Site, currently a vacant wooded lot, is an approximately 99.4-acre parcel (see Figure 3.2-5). The Brook Road option is made up of two parcels (Parcel ID's 1321_5_3 and 1321_5_2) and includes mostly upland forested area with some areas of wetlands associated with the Metedeconk River.

Figure 3.2-5. Brook Road option overview. The view of the wooded parcel from Randolph Road. View to the south.

3.2.3.2 Visual Setting

It is bordered by the existing Larrabee substation to the west, Randolph Road to the north, Oak Glen Road and Brook Road to the east, and the south by the North Branch Metedeconk River which makes up the Monmouth/Ocean County line. Randolph Road is located to the northwest across Randolph Road. A few buildings are located across Brook Road to the east of the property.

3.2.3.3 History of the Site

The property was used as agricultural fields as early as 1930. The associated farmhouse and outbuildings appear to be located across from each other on the east and west sides of Brook Road at the east edge of the 100 Acre option. A large oval area, likely once a horse track, is visible on past and present aerial imagery, with subdivided fields evident within the oval road and surrounding it. To the west of the horse track appears to be densely wooded as early as 1930, although there are some paths visible between the trees and orchards appear to have been planted to the east and southeast of the track. Trees are visible inside the track in the 1980s and forest has reclaimed the land by the early 2000s (Historic Aerials, 2022).

The vacant land of the Brook Road Site is not associated with any event or person, nor does it have the potential to yield information important in history or prehistory; therefore, the property does not meet the criteria for listing in the NRHP.

3.2.4 Fire Road Site

The proposed Cardiff onshore substation/converter location is proposed to be located at one site (as described above) in Egg Harbor Township, Atlantic County, New Jersey (see Figure 2.2-1). A historic context for the development to date within the area of this proposed location is provided in Section 3.2.4.1. The existing location, visual setting, and history of this site is described in Sections 3.2.4.2, 3.2.4.3, and 3.2.4.4.

3.2.4.1 Historic Context

Archives and repositories consulted during EDR's research for the Fire Road Substation/Converter Station included the online digital collections of the Library of Congress, online collections of the Egg Harbor Branch Atlantic County Public Library, online resources of the Atlantic County Office of Cultural and Heritage Affairs, David Rumsey Historical Map Collection, and the United States Geological Survey (USGS; see Section 6.0), and EDR's in-house collection of reference materials. Additionally, EDR reviewed the *History of Atlantic City and County, New Jersey* (Hall, 1900), *History of New Jersey* (Meredith and Hood, 1921), the *Story of New Jersey's Civil Boundaries 1606-1968* (Snyder, 1969), and *Atlantic County Master Plan* (Atlantic County, 2000) for the historic context of the onshore component sites and PAPE.

The Fire Road Substation/Converter Station is located in the Egg Harbor Township, Atlantic County, New Jersey. Atlantic County's 671 square miles (1,738 sq km) are situated along the Atlantic Coastal Plain, roughly 100 miles (161 km) south of New York City and divided into 23 municipal subdivisions, including townships, cities, towns, boroughs, and villages.

Atlantic County was formed in 1837 from the townships of Egg Harbor, Galloway, Hamilton, and Weymouth (Snyder, 1969). The first deed sold in Atlantic County was in the Township of Egg Harbor in the same year and included 40 acres (16.2 ha) of land to Samuel Saunders. An economy around the production of iron arose in the early nineteenth century in the vicinity of Egg Harbor City, but the ore supply was exhausted by the turn of the century (Hall, 1900). In addition, Cape May and Atlantic City emerged as major resort attractions on the Atlantic Ocean during the nineteenth century. By the turn of the twentieth century, most of the residents in Atlantic County lived in Atlantic City (Morrison, 1950; Atlantic County, 2000). During the early-twentieth century, Egg Harbor became center for the manufacturing of cut glass and clothing, but remained primarily agricultural (Meredith and Hood, 1921).

During the first half of the twentieth century, Atlantic County, specifically Atlantic City, continued to grow and was firmly established as the main population center by the 1920s. However, during the second half of the twentieth century, the population shifted from Atlantic City to the suburban county areas, following the nation-wide trends. In the mid-twentieth century, large tracts of farmland in Egg Harbor and in the vicinity of the Vacant Commercial Center Site were purchased and developed into residential communities, with commercial buildings being constructed along the main roadways. In 1976, New Jersey passed an act which legalized gambling in Atlantic City. Consequently, fears of an economic boom and the associated increase in development that might follow in the suburban areas prompted various

environmental conservation laws to protect the natural resources from improper development and suburban sprawl. At the beginning of the twenty-first century, Atlantic County was undergoing gentrification in some populated areas where the transition from multi-family apartment housing to new single-family dwellings occurred. In the suburban areas, senior housing developments were being constructed in response to the area's aging population (Atlantic County, 2000).

3.2.4.2 Existing Conditions

The Fire Road Substation/Converter Station is proposed to be located on a vacant wooded lot on Fire Road (County Road 651) in Egg Harbor Township, Atlantic County, New Jersey. This site is approximately 20-acres and bordered to the north by Fire Road (County Road 651), commercial development to the west, Hingston Avenue to the south, and by a mix of apartment complexes, single-family residences, and a hotel to the east (see Figure 3.2-6). The southern portion of the lot has a cleared drive with curbing and storm drains, suggesting the parcel was prepared for residential and/or commercial development at one time. Based on a review of aerial photos the access drive was constructed between 1984 and 1995 (Historic Aerials, 2022).

Figure 3.2-6 Proposed Fire Road Substation/Converter Station Location.

Figure 3.2-7 Overview of the cleared entranceway to the Fire Road Site off of Hingston Avenue. Note the curb, photo left. View to the northwest.

Figure 3.2-8 Overview of the wooded areas of the Fire Road Site from Hingston Avenue. View to the northwest.

3.2.4.3 Visual Setting

The proposed Fire Road Substation/Converter Station is located on a vacant wooded lot in a densely developed section of Egg Harbor Township. The area surrounding the proposed location consists of commercial and high-density residential development with a mix of freestanding commercial structures and condominium housing immediately adjacent to the parcel. Additionally, within the PAPE exists areas of dense forestation, salt marsh, industrial development, the inland bay, recreational spaces, low and medium density residential development, and major transportation corridors including the Garden State Parkway and the Atlantic City Expressway.

3.2.4.4 History of the Site

Historical aerial photography from 1931 depicts the proposed Fire Road Site as wooded land between what appear to be cleared agricultural tracts. Fire Road, Tilton Road, Old Egg Harbor Road, and Hingston Road are all visible in the same general location as their present-day configuration. Imagery from 1951 and 1957 shows little to no change. By 1963, imagery shows partial clearing through the center of the Fire Road Site, extending from the back yard of one of the residential lots along Old Egg Harbor Road to the east. By 1970 the cleared area is partially overgrown, and fully reclaimed by forest by 1984. Some of the agricultural land surrounding the Fire Road Site has also been left fallow and started to become vegetated at this time, while an apartment complex (still extant today) has been constructed immediately to the east. In 1995, imagery shows significant disturbance and clearing in the southern portion of the Fire Road Site, another clearing in the center of the area, and a series of cleared pathways throughout (Historic Aerials, 2022). From 2002 till present day imagery shows the gradual regrowth of the cleared areas, as well as a retention pond/basin in the south of the area that corresponds to the dugout area identified in lidar data.

In brief, the historical map review demonstrates that location of the Fire Road Site remained undeveloped wooded and/or agricultural land until approximately 1995, at which time the location underwent some clearing and earthmoving, likely as preparation for additional development that never occurred.

The vacant land of the Fire Road Site is not associated with any event or person, nor does it have the potential to yield information important in history or prehistory; therefore, the property does not meet the criteria for listing in the NRHP.

3.3 **Historic Context – O&M Facility PAPE**

Archives and repositories consulted during EDR's research for the O&M Facility included the online digital collections of the Library of Congress, online resources of the Atlantic County Office of Cultural and Heritage Affairs, David Rumsey Historical Map Collection, and the United States Geological Survey (USGS), and EDR's in-house collection of reference materials. Additionally, EDR reviewed the *History of Atlantic City and County, New Jersey* (Hall, 1900), *History of New Jersey* (Meredith and Hood, 1921), *Outline History of New Jersey* (New Jersey History Committee, 1950), the *Story of New Jersey's Civil Boundaries 1606-1968* (Snyder, 1969), and *Atlantic County Master Plan* (Atlantic County Planning, 2000) for the historic context of the O&M Facility Site and PAPE.

The O&M Facility is located in Atlantic City, Atlantic County, New Jersey. Atlantic County's 671 square miles (1,738 sq km) are situated along the Atlantic Coastal Plain, roughly 100 miles (161 km) south of New York City and divided into 23 municipal subdivisions, including townships, cities, towns, boroughs, and villages.

New Jersey has been the site of human occupation for at least 12,000 years. At the time of European first contact, Atlantic County, like most of New Jersey, was occupied by the Lenni Lenape people. The local branch was the Unalachtigo Lenape, or the "people who live near the ocean" (Snyder, 1969). The first European voyagers included the Dutch, Finns, and Swedes, who founded competing trade settlements along the coast from present-day Cape May to Trenton. The Finnish and Swedish colonies, however, did not receive enough support from their respective home countries, and suffered from a lack of financial and human resources. In 1655, Peter Stuyvesant sent a fleet of Dutch ships to raid the Finnish and Swedish settlements, resulting in the Dutch taking over control of the area for New Netherland (Meredith and Hood, 1921; Snyder, 1969).

The New Jersey colonies came under English control when the Dutch were defeated in 1664. For the next century, emigres from Holland, Huguenots from France, and Scots, among others, made New Jersey their home. During this early colonial period, the colony was split into two halves, East and West Jersey. In 1686, the area comprising the PAPE was located in Gloucester County in West Jersey. During the American Revolution, southern New Jersey was the site of many battles. For four months in 1783, the City of Princeton served as the United States' capital (Meredith and Hood, 1921; Snyder, 1969).

Atlantic County was formed in 1837 from the townships of Egg Harbor, Galloway, Hamilton, and Weymouth (Snyder, 1969). Prior to the introduction of the railroad, the area which is now Atlantic City had only seven buildings (Hall, 1900). Cape May and Atlantic City emerged as major resort attractions on the Atlantic Ocean by the end of the nineteenth century. By the turn of the twentieth century, most of the residents in Atlantic County lived in Atlantic City (New Jersey History Committee, 1950; Atlantic County Planning, 2000).

During the first half of the twentieth century, Atlantic County, specifically Atlantic City, continued to grow and remain popular. However, during the second half of the twentieth century, the population shifted from Atlantic City to the suburban county areas, following the nation-wide trends. In 1976, New Jersey passed an act which legalized gambling in Atlantic City. Consequently, fears of an economic boom in the suburban areas prompted various environmental conservation laws to protect the natural resources from improper development and suburban sprawl. Atlantic City experienced decline in 1970s and 1980s that reflected national trends in most major US cities (Atlantic County Planning, 2000).

At the beginning of the twenty-first century, Atlantic County was undergoing gentrification in some populated areas where the transition from multi-family apartment housing to new single-family dwellings occurred. In the suburban areas, senior housing developments were being constructed in response to the area's aging population. However, during the late twentieth and early twenty-first century, efforts were

made to revitalize neighborhoods and amenities within Atlantic City, including Gardner's Basin and Clam Creek areas immediately adjacent to the proposed O&M Facility (Atlantic County Planning, 2000).

3.3.1 Existing Conditions

The parcel at 801 North Maryland Avenue is currently a vacant lot in a state of disrepair. Sections of cracked concrete paving cover most of the ground surface, with grass and weeds growing out of the gaps (See Figure 2.2-1). A chain link fence encloses the site on its three land facing sides, the fourth side is open to the Clam Creek and the State Marina. The southern third of the parcel has grass ground cover enclosed within an approximately 5-foot-tall concrete wall (See Figure 2.2-2). Within the concrete wall three large concrete, sand, and gravel foundation pads of roughly octagonal shape are visible on the ground surface. Partially collapsed wood and concrete bulkheading faces the marina (See Figure 2.2-3). Closer inspection of the bulkhead revealed an approximately 1.5-2.0-foot-thick concrete pad capping the northern portion of the site, and a short, four-course-high brick wall remnant extending above ground the surface grade (See Figure 2.2-4).

The State Marina parking lot is a moderately-well maintained paved parking lot that is currently in active use (See Figures 2.2-5 and 2.2-6). A chain link fence with wooden posts and perimeter landscaping borders the parcel on the side adjacent to North Maryland Ave, while the remaining sides are left open to the remainder of the parking lot and the water/marina.

Figure 3.3-1. Overview of the shoreside parcel at 801 North Maryland Avenue with cracked concrete paving and chain link fence. View to the southeast.

Figure 3.3-2. Overview of the southern portion of the proposed Facility Site, enclosed in a concrete wall with roughly octagonal concrete foundation pads. View to the north.

Figure 3.3-3. Overview of partially collapsed wood and concrete bulkhead facing the marina. View to the south.

Figure 3.3-4. Close up of bulkhead in disrepair, showing thick concrete foundation pad and remains of a brick wall.

Figure 3.3-5. Overview of the state marina parking lot parcel, showing the fencing and perimeter landscaping bordering North Maryland Avenue, view to the south.

Figure 3.3-6. Overview of the state marina parking lot parcel, showing a close-up view of vegetation in the southern portion of the parcel, view to the south.

3.3.2 Visual Setting

As stated above, the proposed O&M Facility is located in a densely developed neighborhood in Atlantic City. Directly to the north of the O&M Facility are major thoroughfares of Huron Avenue and Brigantine Boulevard (see Figure 2.4-2). Further north from the O&M Facility is the Borgata Casino, Clam Thoroughfare and Absecon Bay. To the east of the O&M Facility is Clam Creek and the State Marina as well as a residential neighborhood located around Delta Basin, Snug Harbor and Gardner's Basin (see Figure 2.4-2). To the south of the O&M Facility is the Delta Basin and a mixed-use neighborhood and to the west is predominantly multi-family residential development.

Figure 3.3-7. View to the north-northeast toward the state marina site (photograph by EDR, 2021).

Figure 3.3-8. View to the west-southwest across Clam Creek toward the O&M Facility. The NRHP-eligible USCG Station Atlantic City is visible at left (photograph by EDR, 2021).

3.3.3 *History of the Site*

The O&M Facility is located on made-made reclaimed land that was formerly undeveloped tidal marshland. Available aerial imagery from 1920 indicates at this time the site was still undeveloped tidal marshland; however, by 1931 the alignment of North Maryland Avenue was cleared and within the site a large rectangular structure and six round tanks, presumably oil storage tanks, were extant. This configuration is again visible on a 1957 aerial and at this time the site also included a dock extending into Clam Creek. A retaining wall is also visible within the site. The marina to the northwest in the area of the proposed parking structure was constructed ca. 1960 and by 1970 a large housing developed was constructed to the southwest of the site on the southwest side of North Maryland Avenue. Between 1984 and 1995 the six large oil tanks were removed from the site and by 2002 the large building was also removed and the lot remains cleared with no extant historic structures (NETR, 2023).

The proposed O&M Facility location was used in the mid-twentieth century as an industrial parcel that was presumably used for oil storage. No significant structures are currently present at the O&M Facility site, and the historic map and aerial photography review did not depict any structure that was atypical from any extant midcentury structures located within industrial parcels in Atlantic City or the greater region. Furthermore, background research did not uncover any indication that the parcel was associated with any local or regional historic event or individual, nor does it provide any new information on midcentury industrial practices in the area. The O&M Facility site therefore does not meet any of the criteria for listing in the NRHP (see the Intensive-Level Architectural Survey Form in Appendix II-W Intensive-Level Architectural Survey Report).

The State Marina parking lot at 600 Huron Avenue is a vacant lot located on made-made reclaimed land that was formerly undeveloped tidal marshland. There are currently no standing structures on the property. The parcel does not have the potential to yield information important in history or prehistory; therefore, 600 Huron Avenue does not meet the criteria for listing in the NRHP (see the Intensive-Level Architectural Survey Form in Appendix II-W Intensive-Level Architectural Survey Report).

4.0 DATA SUMMARY

4.1 Field Survey Results – Wind Turbine Area

Based on EDR’s desktop review and field survey methodologies as described in Section 2.2, the surveyed properties within the WTA PAPE included aboveground historic properties that have been previously determined eligible for listing in or listed in the NRHP as well as properties recommended to meet NRHP eligibility criteria, and properties recommended as not eligible for listing on the NRHP. Following completion of the field surveys these properties were further evaluated for potential NRHP eligibility based on desktop research.

4.1.1 Aboveground Historic Properties within the WTA PAPE

Within the PAPE, 123 properties were identified as either previously determined to be eligible for inclusion in or listed in the NRHP or recommended eligible by EDR, including (see Table 4.1-1):

- 2 NHLs
- 16 NRHP-Listed Properties
- 62 Properties Previously Determined NRHP-Eligible
- 2 Local Historic Properties
- 41 Properties Recommended NRHP-Eligible

Table 4.1-1 includes a list of all aboveground historic properties as defined by 30 CFR 585 (including properties previously listed on or determined eligible for listing on the NRHP, NHLs, and properties recommended by EDR to meet NRHP eligibility criteria) located within the PAPE and included as part of this survey.

Table 4.1-1. Aboveground Historic Properties Surveyed – WTA PAPE

Property ID	Property Name	Address	Municipality	Recommended Designation
1	Dr. Jonathan Pitney House	57 North Shore Road	Absecon City	NRHP-Listed
2	South Shore Road Historic District	S. Shore Road roughly bounded by Nevada Avenue, and Statton Avenue	Absecon City	NRHP-Eligible (NJHPO-Determined)
3	North Shore Road Historic District	N. Shore Road roughly bounded by Creek Road to the south and the town line to the north	Absecon City	NRHP-Eligible (NJHPO-Determined)
4	U.S. Route 30 Bridge (SI&A # 0103-152)	U.S. Route 30 (Absecon Boulevard) over Beach Thorofare	Atlantic City	NRHP-Eligible (NJHPO-Determined)
5	Two-and-a-half-story Residence at 4700 Atlantic Avenue	4700 Atlantic Avenue	Atlantic City	NRHP-Eligible (EDR-Recommended)
6	Two-and-a-half-story Residence at 104 S. Montgomery Avenue	104 S. Montgomery Avenue	Atlantic City	NRHP-Eligible (EDR-Recommended)
7	Residence at 125 S Montgomery Avenue	125 S Montgomery Avenue	Atlantic City	NRHP-Eligible (EDR-Recommended)

Property ID	Property Name	Address	Municipality	Recommended Designation
8	Two-story Residence at 108 S. Raleigh Avenue	108 S. Raleigh Avenue	Atlantic City	NRHP-Eligible (EDR-Recommended)
9	Two-and-a-half-story Residence at 116 S. Ridgeway Avenue	116 S. Ridgeway Avenue	Atlantic City	NRHP-Eligible (EDR-Recommended)
10	The Knife and Fork Inn	3600 Atlantic Avenue	Atlantic City	NRHP-Eligible (NJHPO-Determined)
11	Ritz Carlton Hotel	2715 Boardwalk	Atlantic City	NRHP-Eligible (NJHPO-Determined)
12	USCG Station Atlantic City	900 Beach Thorofare	Atlantic City	NRHP-Eligible (NJHPO-Determined)
13	Atlantic City Convention Hall	Boardwalk between Pacific, Mississippi, and Florida Avenues	Atlantic City	National Historic Landmark
14	Administration Building for the Board of Education	1809 Pacific Avenue	Atlantic City	NRHP-Eligible (NJHPO-Determined)
15	Warner Theatre (façade)	Atlantic City Boardwalk between Michigan and Arkansas Avenues	Atlantic City	NRHP-Eligible (NJHPO-Determined)
16	Carnegie Library (Atlantic City Public Library)	35 South Dr. Martin Luther King Jr. Boulevard	Atlantic City	NRHP-Eligible (EDR-Recommended)
17	Atlantic City Beautiful Historic District	N. Connecticut Avenue roughly bounded by N. Massachusetts, N. New Jersey, Barret, and Adriatic Avenues	Atlantic City	NRHP-Eligible (NJHPO-Determined)
18	Brighton Park	1801 Boardwalk	Atlantic City	NRHP-Eligible as a contributing element to the Atlantic City Boardwalk Historic District (EDR-Recommended)
19	The Inn of the Irish Pub	164 St. James Place	Atlantic City	NRHP-Eligible (EDR-Recommended)
20	Commercial Building at 1425 Boardwalk	1425 Boardwalk	Atlantic City	NRHP-Eligible (EDR-Recommended)
21	Two-and-a-half-story Residence at 124 Atlantic Avenue	124 Atlantic Avenue	Atlantic City	NRHP-Eligible (EDR-Recommended)
22	Colonial Revival Residence at 120 Atlantic Avenue	120 Atlantic Avenue	Atlantic City	NRHP-Eligible (EDR-Recommended)
23	Absecon Lighthouse	Pacific and Rhode Island Avenues	Atlantic City	NRHP-Listed
24	Atlantic City Boardwalk Historic District	Boardwalk roughly bounded by S. Georgia Avenue to the southwest and Garden Pier to the northeast	Atlantic City	NRHP-Eligible (NJHPO-Determined)
25	Camden and Atlantic Railroad Historic District	Within the former railroad grade that traveled from Camden in Camden County to Atlantic City in Atlantic County.	Atlantic City, Winslow Township, Waterford Township, Chesilhurst Borough, Absecon City, Pleasantville City, Egg Harbor Township, Egg Harbor City, Hammonton Town, Mullica Township, and	NRHP-Eligible (NJHPO-Determined)

Property ID	Property Name	Address	Municipality	Recommended Designation
			Galloway Township	
26	Townsend Inlet Bridge (SI&A # 3100003)	Ocean Highway over Townsend Inlet	Avalon Borough, Middle Township, and Sea Isle City	NRHP-Eligible (NJHPO-Determined)
27	Barnegat Lighthouse	Northern end of Long Beach Island	Barnegat Light Borough	NRHP-Listed
28	Bass River State Forest Historic District	Stage Road	Bass River Township	NRHP-Eligible (NJHPO-Determined)
29	Beach Haven Historic District	Roughly bounded on the north by 3rd Street, on the east by South Atlantic Avenue, on the south by Pearl Street, on the west by properties to the west of South Beach Avenue.	Beach Haven Borough	NRHP-Listed
30	Beach Haven Historic District (Boundary Increase and Additional Documentation)	Roughly bounded by Atlantic, Bay, Fifth, and Chatsworth Avenues	Beach Haven Borough	NRHP-Listed
31	Greater Beach Haven Historic District	Roughly the west side of Atlantic Avenue to Chatsworth Avenue to the south, Bay Avenue to the west and the north side of Fifth Street.	Beach Haven Borough	Local Historic District
32	Residence at 101 Dolphin Avenue	101 Dolphin Avenue	Beach Haven Borough	NRHP-Eligible (EDR-Recommended)
33	Garden State Parkway Historic District	Garden State Parkway	Bergen, Passaic, Essex, Union, Middlesex, Monmouth, Ocean, Atlantic and Cape May	NRHP-Eligible (NJHPO-Determined)
34	AT&T Transmitter Building and Antenna Field	83 Bayview Avenue (Ocean County Route 617)	Berkeley Township	NRHP-Eligible (NJHPO-Determined)
35	Midway Camps Historic District	Bounded on the north by 14th Avenue, on the east by Ocean Avenue, on the south by 20th Avenue, and on the west by Central Avenue	Berkeley Township	NRHP-Eligible (NJHPO-Determined)
36	Island Beach State Park Historic District	Central Avenue	Berkeley Township	NRHP-Eligible (EDR-Recommended)
37	The Judge's Shack	Central Avenue	Berkeley Township	NRHP-Eligible (NJHPO-Determined)
38	Brigantine Lighthouse	Brigantine Boulevard (County Route 638)	Brigantine City	NRHP-Eligible (NJHPO-Determined)
39	Residence at 2201 Bayshore Avenue	2201 Bayshore Avenue	Brigantine City	NRHP-Eligible (EDR-Recommended)
40	Residence at 2707 West Brigantine Avenue	2707 West Brigantine Avenue	Brigantine City	NRHP-Eligible (EDR-Recommended)
41	Chateausque House at 2807 Ocean Avenue	2807 Ocean Avenue	Brigantine City	NRHP-Eligible (EDR-Recommended)
42	Residence at 200 18th Street South	200 18th Street South	Brigantine City	NRHP-Eligible (EDR-Recommended)
43	Central School / Brigantine Library	201 15th Street S	Brigantine City	NRHP-Eligible (EDR-Recommended)

Property ID	Property Name	Address	Municipality	Recommended Designation
44	Brigantine Hotel	1400 Ocean Avenue	Brigantine City	NRHP-Eligible (EDR-Recommended)
45	St. Thomas Catholic Church	331 8th Street South	Brigantine City	NRHP-Eligible (EDR-Recommended)
46	North and South Tuckahoe Historic District	Main Street and NJ 50 from 303 NJ 50 to 2057 NJ 50	Corbin City and Upper Township	NRHP-Eligible (NJHPO-Determined)
47	Isaac and Keziah (Abbot) Smith House	152 Lee's Lane	Egg Harbor Township	NRHP-Eligible (EDR-Recommended)
48	Studebaker Showroom	7006 Black Horse Pike	Egg Harbor Township	NRHP-Eligible (NJHPO-Determined)
49	L.N. Renault and Sons Winery	72 North Breman Avenue	Galloway Township	NRHP-Listed
50	Germania Gunning Club	722 West Moss Mill Road	Galloway Township	NRHP-Eligible (EDR-Recommended)
51	Conovertown Historic District	North Shore Road roughly bounded by Old Shore Road to the north and the town line to the south	Galloway Township	NRHP-Eligible (NJHPO-Determined)
52	Seaview Golf Club (historic), Clarence Geist Pavilion	401 South New York Road	Galloway Township	NRHP-Eligible (EDR-Recommended)
53	Oceanville / Leeds Point / Moss Mill Historic District	S. Leeds Point Road roughly bounded by E. Moss Road to the north and E. Somerstown Lane to the south.	Galloway Township	NRHP-Eligible (NJHPO-Determined)
54	Abbott's Modern Cabins	217 NJ Route 40	Hamilton Township	NRHP-Listed
55	West Jersey and Atlantic Railroad Historic District	N/A	Hamilton Township and Egg Harbor Township	NRHP-Eligible (NJHPO-Determined)
56	Woodmansee Estate	1 Game Farm Road	Lacey Township	NRHP-Eligible (NJHPO-Determined)
57	Ocean Beach Historic District (Units 1, 2, and 3)	The district comprises three separate dense residential areas in Lavallette Borough, each bisected by State Route 35 North and containing orderly east-west streets. Each district is bounded on the east by the beaches at Dover Beaches North (in the northern most district), Chadwick Beach (in the central district), and Island Beach (in the southern-most district).	Lavallette Borough	NRHP-Eligible (NJHPO-Determined)
58	Stevens House	1 Brown Avenue	Lavallette Borough	NRHP-Eligible (EDR-Recommended)
59	Linwood Historic District	Roughly Shore Road from Royal Avenue to Sterling Avenue	Linwood	NRHP-Listed
60	Little Egg Harbor US Life Saving Station #23	800 Great Bay Boulevard	Little Egg Harbor Township	NRHP-Eligible (NJHPO-Determined)
61	Cape May Lighthouse	Cape May Point	Lower Township	NRHP-Listed

Property ID	Property Name	Address	Municipality	Recommended Designation
62	Mantoloking Historic District	Bounded on the north by the municipal line with Bay Head Borough, the municipal boundary with Brick Township to the south, the beaches at Mantoloking to the east, and Barnegat Bay to the west	Mantoloking Borough	NRHP-Eligible (NJHPO-Determined)
63	Lucy, the Margate Elephant	Decatur and Atlantic Avenues	Margate City	National Historic Landmark
64	Two-Story Residence at 114 South Osborne Avenue	114 South Osborne Avenue	Margate City	NRHP-Eligible (Ocean Wind I-Determined)
65	Two-Story Residence at 108 South Gladstone Avenue	108 South Gladstone Avenue	Margate City	NRHP-Eligible (NJHPO-Determined)
66	Margate Fishing Pier	121 S. Exeter Avenue	Margate City	NRHP-Eligible (EDR-Recommended)
67	Grassy Sound Historic District	Houses along the East and West Bank of Grassy Sound north of Route 147	Middle Township	NRHP-Eligible (NJHPO-Determined)
68	Sahara Motel	510 East 18th Avenue	North Wildwood City	NRHP-Eligible (EDR-Recommended)
69	American Inn (Lou Booth Motel)	510 East 13th Avenue	North Wildwood City	NRHP-Eligible (NJHPO-Determined)
70	Aloha Motel	210 John F Kennedy Boulevard	North Wildwood City	NRHP-Eligible (EDR-Recommended)
71	Hereford Lighthouse	111 North Central Avenue	North Wildwood City	NRHP-Listed
72	North Wildwood Life Saving Station	113 North Central Avenue	North Wildwood City	NRHP-Eligible (NJHPO-Determined)
73	Shore Road Historic District	Shore Road roughly bounded by E. Oakcrest Avenue to the south and the town line to the north	Northfield	NRHP-Eligible (NJHPO-Determined)
74	Folk Victorian Residence at 5231-5229 Central Avenue	5231-5229 Central Avenue	Ocean City	NRHP-Eligible (EDR-Recommended)
75	St. Augustine Rectory	1310 Ocean Avenue	Ocean City	NRHP-Eligible (EDR-Recommended)
76	Music Pier	825 Boardwalk	Ocean City	NRHP-Eligible (NJHPO-Determined)
77	Gillian's Wonderland Pier	600 Boardwalk	Ocean City	NRHP-Eligible (NJHPO-Determined)
78	Residence at 319 W. Leeds Avenue	319 W Leeds Avenue	Pleasantville City	NRHP-Eligible (EDR-Recommended)
79	Wesley Methodist Episcopal Church (historic)	102-110 Linden Avenue	Pleasantville City	NRHP-Eligible (EDR-Recommended)
80	Chestnut Neck Boat Yard	758 Old New York Road	Port Republic City	NRHP-Eligible (NJHPO-Determined)
81	Residence at 22 54th Street	22 54th Street	Sea Isle City	NRHP-Eligible (NJHPO-Determined)
82	Residence at 24 53rd Street	24 53rd Street	Sea Isle City	NRHP-Eligible (NJHPO-Determined)
83	Folk Victorian Residence at 12 50th Street	12 50th Street	Sea Isle City	NRHP-Eligible (NJHPO-Determined)

Property ID	Property Name	Address	Municipality	Recommended Designation
84	Second Empire Residence at 26 46th Street	26 46th Street	Sea Isle City	NRHP-Eligible (NJHPO-Determined)
85	Residence at 20 46th Street	20 46th Street	Sea Isle City	NRHP-Eligible (NJHPO-Determined)
86	Folk Victorian Residence at 13 47th Street	13 47th Street	Sea Isle City	NRHP-Eligible (NJHPO-Determined)
87	Braca Cafe	18 JFK Boulevard	Sea Isle City	NRHP-Eligible (NJHPO-Determined)
88	U.S. Life Saving Station No. 13	1701 North Ocean Avenue	Seaside Park Borough	NRHP-Eligible (NJHPO-Determined)
89	Somers Mansion	1000 Shore Road	Somers Point	NRHP-Listed
90	New York Avenue School	121 W New York Avenue	Somers Point	NRHP-Eligible (EDR-Recommended)
91	Bay Front Historic District Extension	745-900 Shore Road	Somers Point	NRHP-Eligible (NJHPO-Determined)
92	Shore Road Historic District	Shore Road roughly bounded by Goll Avenue, Pleasant Avenue, and Center Street	Somers Point	NRHP-Eligible (EDR-Recommended)
93	Bay Front Historic District	Roughly bounded by Decatur Ave., Egg Harbor Bay, George Ave., and Shore Rd	Somers Point	NRHP-Listed
94	Tuckerton Historic District (Local)	The district comprises select blocks on the north and south sides of U.S. Route 9 between Locust Street in the eastern extent and Taylor Street in the western extent.	Tuckerton Borough	Local Historic District
95	Tuckerton Historic District	U.S. Route 9 and County Route 539, roughly between Parkers Landing and Pohatcong Lake.	Tuckerton Borough	NRHP-Eligible (NJHPO-Determined)
96	Marshallville Historic District	Roughly between 286 and 375 Marshallville Road	Upper Township	NRHP-Listed
97	South Tuckahoe Historic District	Roughly NJ 557 and NJ 50 from the Tuckahoe River to Kendall Lane	Upper Township	NRHP-Listed
98	Corson's Inlet Bridge (SI&A # 3100002)	Ocean Drive, Bay Avenue (County Rte. 619) over Strathmere Bay	Upper Township	NRHP-Eligible (NJHPO-Determined)
99	Residence at 25 North Bayview Drive	25 North Bayview Drive	Upper Township	NRHP-Eligible (EDR-Recommended)
100	Two Residences at 1 Cove Road	1 Cove Road	Upper Township	NRHP-Eligible (EDR-Recommended)
101	Residence at 114 South Harvard Avenue	114 South Harvard Avenue	Ventnor City	NRHP-Eligible (NJHPO-Determined)
102	Ventnor City Fishing Pier	Cambridge Avenue at the Ventnor City Boardwalk	Ventnor City	NRHP-Eligible (EDR-Recommended)
103	Saint Leonard's Tract Historic District	Ventnor and Atlantic Avenues roughly bounded by the shoreline, S. Surrey Avenue, N. Cambridge Avenue and the Intercoastal Waterway	Ventnor City	NRHP-Eligible (NJHPO-Determined)
104	John Stafford Historic District	100 blocks of Vassar Square, Baton Rouge, Marion and	Ventnor City	NRHP-Listed

Property ID	Property Name	Address	Municipality	Recommended Designation
		Austin Avenues		
105	Vassar Square Condominiums	4800 Boardwalk	Ventnor City	NRHP-Eligible (BOEM-Determined)
106	Green Bank Historic District	East and west of the intersection of County Routes 542 and 561.	Washington Township	NRHP-Eligible (NJHPO-Determined)
107	George A. Redding Bridge (SI&A # 0506150)	NJ Route 47 over Grassy Sound	Wildwood City	NRHP-Eligible (NJHPO-Determined)
108	Wildwoods Shore Resort Historic District	Roughly Atlantic Avenue and Ocean Avenue between East Andrews and East Pittsburgh Avenues	Wildwood City	NRHP-Eligible (NJHPO-Determined)
109	Wildwood Amusement Piers	3401 Boardwalk	Wildwood City	NRHP-Eligible (EDR-Recommended)
110	Wildwood Boardwalk and Piers Historic District	Between East 16th Avenue and East Cresse Avenue	Wildwood Crest Borough, North Wildwood City, and Wildwood City	NRHP-Eligible (EDR-Recommended)
111	Atlantic City Railroad Cape May Division Historic District	N/A	Winslow Township, Folsom, Richland, Dorothy, Estell Manor, Corbin City, Woodbine, Dennis Township, Ocean City, and Cape May	NRHP-Eligible (NJHPO-Determined)
112	U.S. Life Saving Station No. 14	Central Avenue	Berkeley Township	NRHP-Listed
113	Ocean City Boardwalk	N/A	Ocean City	NRHP-Eligible (NJHPO-Determined)
114	Missouri Avenue Beach (Chicken Bone Beach)	N/A	Atlantic City	NRHP-Eligible (EDR-Recommended)
115	Riviera Apartments	116 S. Raleigh Avenue	Atlantic City	NRHP-Eligible (NJHPO-Determined)
117	Trylon Motel	1200 JFK Drive	Wildwood City	NRHP-Eligible (NJHPO-Determined)
118	Clairidge Hotel	120 South Indiana Avenue	Atlantic City	NRHP-Eligible (NJHPO-Determined)
119	Central Pier	1400 Boardwalk	Atlantic City	NRHP-Eligible (NJHPO-Determined)
121	Le Sabre Condominiums	510 East 8th Avenue	Wildwood City	NRHP-Eligible (NJHPO-Determined)
122	European Motel	300 Ocean Avenue	Wildwood City	NRHP-Eligible (NJHPO-Determined)
123	Beach Hugger Motel (ex Al Sann)	210 Ocean Avenue	Wildwood City	NRHP-Eligible (NJHPO-Determined)
125	Athens II Motor Inn	201 Ocean Avenue	North Wildwood City	NRHP-Eligible (EDR-Recommended)
126	Acacia Beachfront Resort	9101 Atlantic Avenue	Wildwood Crest Borough	NRHP-Eligible (EDR-Recommended)

4.1.2 Properties Recommended Not NRHP-Eligible – WTA PAPE

A total of 401 properties within the WTA PAPE documented as part of the field surveys have been recommended as not meeting the eligibility criteria for listing in the NRHP (see Attachment K: Architectural Survey Forms: Properties Recommended Not NRHP-Eligible). The majority of these properties are over 40 years of age, but do not have the architectural and/or historical significance necessary to meet the eligibility requirements. For example, the residence located at 109 E. Hobart Avenue in Long Beach Township is a simple, two-story vernacular house constructed circa 1980. Although the building is over 40 years old, it is a common design, lacking architectural detail and is not associated with a notable architect, person or event. The building does not possess the architectural or historical significance necessary to be recommended eligible for listing in the NRHP.

4.2 Field Survey Results – Onshore Facilities

After the completion of the desktop review (summarized in Section 2.2.4.2), field surveys were then conducted in November 2022 and February 2023. Survey fieldwork included systematically driving public roads within the Onshore Facilities PAPEs to document the integrity and setting of previously identified aboveground historic properties (e.g., NRHP-listed and NRHP-eligible properties). This included photographs of the building(s) (and property) and field notes describing the style, physical characteristics and materials (e.g., number of stories, plan, external siding, roof, foundation, and sash), condition, physical integrity, and other noteworthy characteristics for each resource. Other known criteria aside from architecture which may contribute to a property's NRHP eligibility were also noted and evaluated. A total of 18 properties were documented within the Onshore Facilities PAPEs, including three NRHP-eligible properties, and 15 properties recommended to not meet NRHP eligibility criteria (see Attachment E: All Properties Surveyed – Onshore PAPE).

4.2.1 Aboveground Historic Properties Within the Onshore Facilities PAPEs

Following the desktop review and field survey, three of the properties reviewed are considered aboveground historic properties. For the purposes of this survey, historic districts were considered as a single aboveground historic property rather than to each of the contributing properties, as not all contributing properties within historic districts are located in the Onshore Facilities PAPEs. One aboveground historic property was identified in all three Larrabee Substation/Converter Station Location PAPEs (see Table 4.2-1), and two aboveground historic properties were identified in the Fire Road Site PAPE (see Table 4.2-2).

Table 4.2-1. Aboveground Historic Properties in the Larrabee Substation/Converter Stations PAPEs

Survey ID	Property Name	Address	Municipality	NRHP Status
9262	New Jersey Southern Railroad Historic District	N/A	Multiple	NRHP-Eligible (NJ HPO-Determined)

Table 4.2-2. Aboveground Historic Properties in the Fire Road Site PAPE

Survey ID	Property Name	Address	Municipality	NRHP Status
9281	West Jersey and Atlantic Railroad Historic District	N/A	Hamilton Township and Egg Harbor Township	NRHP-Eligible (NJ HPO-Determined)
9336	Garden State Parkway Historic District	Garden State Parkway	Bergen, Passaic, Essex, Union, Middlesex, Monmouth, Ocean, Atlantic and Cape May	NRHP-Eligible (NJ HPO-Determined)

4.3 Field Survey Results – O&M Facility

After the completion of the desktop review, field surveys were then conducted in November 2022 and February 2023. Survey fieldwork included systematically driving public roads within the O&M Facility PAPE to document the integrity and setting of previously identified aboveground historic properties (e.g., NRHP-listed and NRHP-eligible properties). This included photographs of the building(s) (and property) and field notes describing the style, physical characteristics and materials (e.g., number of stories, plan, external siding, roof, foundation, and sash), condition, physical integrity, and other noteworthy characteristics for each resource. Other known criteria aside from architecture which may contribute to a property's NRHP eligibility were also noted and evaluated. A total of 102 properties were documented within the O&M Facility PAPE, including three NRHP-eligible properties, 95 properties recommended to not meet NRHP eligibility criteria.

4.3.1 Aboveground Historic Properties Within the O&M Facility PAPE

Following the desktop review and field survey, three of the properties reviewed are considered aboveground historic properties (see Table 4.3-1). For the purposes of this HREA, historic districts were considered as a single aboveground historic property rather than to each of the contributing properties, as not all contributing properties within historic districts are located in the PAPE.

Table 4.3-1. Aboveground Historic Properties Within the O&M Facility PAPE.

Survey ID	Property Name	Address	Recommended Designation
645	Residence at 419 Carson Avenue	419 Carson Avenue	NRHP-Eligible (NJHPO-Determined)
623	Absecon Lighthouse	301 Pacific Avenue	NRHP-Listed
581	Atlantic City Armory	1008 Absecon Boulevard [Atlantic Boulevard and New York Avenue]	NRHP-Eligible (NJHPO-Determined)
9284	Atlantic City Beautiful Historic District	N/A	NRHP-Eligible (NJHPO-Determined)

Survey ID	Property Name	Address	Recommended Designation
550	Bartlett Building	1100 Atlantic Avenue	NRHP-Eligible (EDR-Recommended)
624	Fire Station #9	734 North Indiana Avenue	NRHP-Eligible (NJHPO-Determined)
579	USCG Station Atlantic City	900 Beach Thorofare	NRHP-Eligible (NJHPO-Determined)

4.4 NJHPO Architectural Survey Forms

For each of the extant properties surveyed in the PAPes, EDR completed NJHPO Architectural Survey Forms. These forms are included in Attachment J: Architectural Survey Forms – National Historic Landmarks, NRHP-Eligible or Listed Properties and Attachment K: Architectural Survey Forms – Properties Recommended Not NRHP-Eligible.

5.0 POTENTIAL EFFECTS OF THE PROJECTS

Construction of the Projects will not require the demolition or physical alteration of any historic buildings or other aboveground historic properties. No direct physical effects to aboveground historic properties will occur as a result of the Projects. The Projects' effect on a given aboveground historic property would be a change (resulting from the introduction of new structures) in the property's visual setting. The HRVEA reports for the WTA (EDR, 2023a), Onshore Facilities (EDR, 2023b), and O&M Facility (2023c) prepared by EDR summarize the potential visual effects of the Projects to aboveground historic properties listed in, or eligible for listing in the NRHP (as well as National Historic Landmarks) located in the respective PAPEs. A summary of the findings of this report regarding potential adverse effects to aboveground historic properties within the offshore PAPE is provided below.

5.1 Potential Adverse Effects to Aboveground Historic Properties – Wind Turbine Area

Applying the Criteria of Adverse Effect per NHPA Section 106, 36 CFR § 800.5 (as summarized above), the Projects will have a potential adverse effect on a total of 27 aboveground historic properties (see Table 5.1-1).

Table 5.1-1. Aboveground Historic Properties Potentially Adversely Affected

Property ID	Property Name	Address	Municipality	County	Recommended Designation
7	Residence at 125 S Montgomery Avenue	125 S Montgomery Avenue	Atlantic City	Atlantic	NRHP-Eligible (EDR-Recommended)
11	Ritz Carlton Hotel	2715 Boardwalk	Atlantic City	Atlantic	NRHP-Eligible (NJHPO-Determined)
12	USCG Station Atlantic City	900 Beach Thorofare	Atlantic City	Atlantic	NRHP-Eligible (NJHPO-Determined)
13	Atlantic City Convention Hall	Boardwalk between Pacific, Mississippi, and Florida Avenues	Atlantic City	Atlantic	National Historic Landmark
18	Brighton Park	1801 Boardwalk	Atlantic City	Atlantic	NRHP-Eligible as a contributing element to the Atlantic City Boardwalk Historic District (EDR-Recommended)

Property ID	Property Name	Address	Municipality	County	Recommended Designation
21	Two-and-a-half-story Residence at 124 Atlantic Avenue	124 Atlantic Avenue	Atlantic City	Atlantic	NRHP-Eligible (EDR-Recommended)
22	Colonial Revival Residence at 120 Atlantic Avenue	120 Atlantic Avenue	Atlantic City	Atlantic	NRHP-Eligible (EDR-Recommended)
24	Atlantic City Boardwalk Historic District	Boardwalk roughly bounded by S. Georgia Avenue to the southwest and Garden Pier to the northeast	Atlantic City	Atlantic	NRHP-Eligible (NJHPO-Determined)
44	Brigantine Hotel	1400 Ocean Avenue	Brigantine City	Atlantic	NRHP-Eligible (EDR-Recommended)
52	Seaview Golf Club (historic), Clarence Geist Pavilion	401 South New York Road	Galloway Township	Atlantic	NRHP-Eligible (EDR-Recommended)
60	Little Egg Harbor US Life Saving Station #23	800 Great Bay Boulevard	Little Egg Harbor Township	Ocean	NRHP-Eligible (NJHPO-Determined)
63	Lucy, the Margate Elephant	Decatur and Atlantic Avenues	Margate City	Atlantic	National Historic Landmark
64	Two-Story Residence at 114 South Osborne Avenue	114 South Osborne Avenue	Margate City	Atlantic	NRHP-Eligible (Ocean Wind I-Determined)
65	Two-Story Residence at 108 South Gladstone Avenue	108 South Gladstone Avenue	Margate City	Atlantic	NRHP-Eligible (NJHPO-Determined)
66	Margate Fishing Pier	121 S. Exeter Avenue	Margate City	Atlantic	NRHP-Eligible (EDR-Recommended)

Property ID	Property Name	Address	Municipality	County	Recommended Designation
74	Folk Victorian Residence at 5231-5229 Central Avenue	5231-5229 Central Avenue	Ocean City	Cape May	NRHP-Eligible (EDR-Recommended)
76	Music Pier	825 Boardwalk	Ocean City	Cape May	NRHP-Eligible (NJHPO-Determined)
77	Gillian's Wonderland Pier	600 Boardwalk	Ocean City	Cape May	NRHP-Eligible (NJHPO-Determined)
101	Residence at 114 South Harvard Avenue	114 South Harvard Avenue	Ventnor City	Atlantic	NRHP-Eligible (NJHPO-Determined)
102	Ventnor City Fishing Pier	Cambridge Avenue at the Ventnor City Boardwalk	Ventnor City	Atlantic	NRHP-Eligible (EDR-Recommended)
103	Saint Leonard's Tract Historic District	Ventnor and Atlantic Avenues roughly bounded by the shoreline, S. Surrey Avenue, N. Cambridge Avenue and the Intercoastal Waterway	Ventnor City	Atlantic	NRHP-Eligible (NJHPO-Determined)
104	John Stafford Historic District	100 blocks of Vassar Square, Baton Rouge, Marion and Austin Avenues	Ventnor City	Atlantic	NRHP-Listed
105	Vassar Square Condominiums	4800 Boardwalk	Ventnor City	Atlantic	NRHP-Eligible (BOEM-Determined)
113	Ocean City Boardwalk	N/A	Ocean City	Cape May	NRHP-Eligible (NJHPO-Determined)
114	Missouri Avenue Beach (Chicken Bone Beach)	N/A	Atlantic City	Atlantic	NRHP-Eligible (EDR-Recommended)

Property ID	Property Name	Address	Municipality	County	Recommended Designation
115	Riviera Apartments	116 S. Raleigh Avenue	Atlantic City	Atlantic	NRHP-Eligible (NJHPO-Determined)
119	Central Pier	1400 Boardwalk	Atlantic City	Atlantic	NRHP-Eligible (NJHPO-Determined)

The Projects would introduce new man-made features to the seascape horizon, which includes few existing, fixed modern visual elements. The introduction of the WTGs would likely constitute a change to the historic setting of some aboveground historic properties within the PAPE. This is particularly true for those aboveground historic properties for which open views of the ocean are integral, such as lighthouses and recreation areas. Even for historic properties that were once strongly associated with open ocean views, existing conditions may no longer be representative of the settings related to those properties' periods of significance. Many sections of the WTA PAPE have been subject to multiple phases of development, demolition, and redevelopment. These cycles have substantially altered the historic settings of many historic properties located along the shorelines where unobstructed views of the Projects will be concentrated. In such circumstances, the changes to viewsheds related to the Projects may represent a minor, incremental alteration to some settings that have already been compromised. A complete discussion of the potential effects of the WTA portion of the Projects on aboveground historic properties is included in COP Appendix II-O (EDR, 2023a).

5.2 Potential Adverse Effects to Aboveground Historic Properties – Onshore Facilities

Construction of the Onshore Facilities will not require the demolition or physical alteration of any historic buildings or other aboveground historic properties. No direct physical effects to aboveground historic properties will occur as a result of the Onshore Facilities. The Onshore Facilities' effect on a given aboveground historic property would be a change (resulting from the introduction of new structures) in the property's visual setting. The Onshore Facilities would introduce new structures into the landscape. However, at a maximum height of 80 feet (lighting masts only), the proposed Onshore Facilities will not be out of scale or character with the existing types of development currently present in the vicinity. As such, it is anticipated that the Onshore Facilities will not result in visual impacts to aboveground historic properties. Applying the Criteria of Adverse Effect per NHPA Section 106, 36 CFR § 800.5, the O&M Facility will not have an adverse effect on any aboveground historic properties. A complete discussion of the potential effects of the Onshore Facilities on aboveground historic properties is included in COP Appendix II-N1 (EDR, 2023b).

5.3 Potential Adverse Effects to Aboveground Historic Properties – O&M Facility

Construction of the O&M Facility will not require the demolition or physical alteration of any historic buildings or other aboveground historic properties. No direct physical effects to aboveground historic properties will occur as a result of the O&M Facility. The O&M Facility's effect on a given aboveground historic property would be a change (resulting from the introduction of new structures) in the property's visual setting. The O&M Facility would introduce new structures into the landscape. However, at a maximum height of 120 feet (communication antenna only), the proposed O&M Facility will not be out of scale or character with the existing types of development currently present in the vicinity. As such, it is anticipated that O&M Facility will not result in visual impacts to aboveground historic properties. Applying the Criteria of Adverse Effect per NHPA Section 106, 36 CFR § 800.5, the O&M Facility will not have an adverse effect on any aboveground historic properties. A complete discussion of the potential effects of the O&M Facility on aboveground historic properties is included in COP Appendix II-N2 (EDR, 2023c).

5.4 Mitigation of Potential Adverse Effects

Options to avoid potential adverse visual effects on aboveground historic properties are limited, given the nature of the Projects (i.e., very tall, vertical structures) and its siting criteria (i.e., established OCS lease area). Therefore, for most wind energy projects, mitigation of impacts to historic properties typically consists of supporting initiatives that benefit historic sites or buildings and/or the public's appreciation of historic resources to offset potential adverse effects to historic properties resulting from the introduction of WTGs into their visual setting. The specifics of these initiatives are typically identified in consultation with appropriate consulting parties subsequent to the determination of whether a given aboveground historic property would be adversely affected by a project.

Atlantic Shores has initiated outreach with appropriate regional stakeholders who may participate in the BOEM-led Section 106 consultations and development of the EIS under NEPA, and anticipates continued consultation with the appropriate federal agencies, NJHPO, NJDEP, and other consulting parties in connection with the Projects to identify and evaluate visual effects to aboveground historic properties and to determine avoidance, minimization, or mitigation measures regarding potential effects on aboveground historic properties as required by 30 CFR §585.626(b)(15).

Description: The Atlantic City Convention Hall, constructed in 1926-1929 by Lockwood- Greene and Co., exhibits Beaux-Arts and Romanesque style elements and features a cut limestone façade and curved arcade fronting the beach. The arcade features a covered double row of columns anchored by public bathhouses on each end. The facade of the building features massive columns supporting Romanesque arches, and the recessed entrances feature large arched windows. Decorative motifs include elements popular on the Atlantic City Boardwalk in the 1920s and include cut stone ocean flora and fauna.

Photograph:

Description: Lucy, the Margate Elephant was built in 1881 as a real estate marketing gimmick by James Lafferty, who patented zoomorphic architecture. His “Elephant Bazaar” (dubbed “Lucy” by subsequent owners) had a wood frame and tin-clad wood sheathing; the frame has since been reinforced with steel and the sheathing is currently being restored. At 65 ft tall and 60 ft long, it is one of the largest statue-like structures in America and the oldest roadside tourist attraction. In 1970, after threats of demolition, Lucy was moved to a nearby city-owned lot and restored.

Determination of Eligibility: _____	

Description: The South Shore Road Historic District is primarily a residential district centered along South Shore Road. Residences date from the nineteenth and early-twentieth centuries. The houses along South Shore Road, especially in the northern section of the district, are larger in scale and represent examples of Neoclassical, Italianate, Second Empire, Gothic Revival and vernacular styles of architecture. Along the side streets extending off of South Shore Road, residences are typically smaller in scale representing Craftsman and Colonial Revival architectural styles. The Absecon Inn, a "high-style" Second Empire building anchors the northern end of the district. This resource has been previously determined eligible for the NRHP by the NJHPO.

Setting: The South Shore Road Historic District is located on the mainland in Absecon City, Atlantic County, approximately six miles from the Atlantic Ocean. While the district does contain a small portion of Absecon Creek that flows into Absecon Bay, none of the properties within the district are located on the bay or in a maritime setting.

Description: The North Shore Road Historic District is primarily a residential district centered along North Shore Road. Residences date from around the late-eighteenth to the twentieth century. The houses along North Shore Road, especially in the southern section of the district, are larger in scale and represent "high-style" examples of Italianate, Gothic Revival, Queen Anne, Shingle, and vernacular styles of architecture. This resource has been previously determined eligible for the NRHP by the NJHPO.

Setting: The North Shore Road Historic District is located on the mainland in Absecon City, Atlantic County, approximately six miles from the Atlantic Ocean. None of the properties within the district are located on the bay or in a maritime setting. However, views of Absecon Creek, which eventually flows into Absecon Bay, are visible at the end of some roads from limited points in the district.

Determination of Eligibility: _____	

Description: The Atlantic City Beautiful Historic District was determined to be eligible for listing in the NRHP by NJHPO in 2014 with significance under Criterion C. The district is characterized by Bungalow dwellings located in what was historically known as Bungalow Park.

Setting: The Atlantic City Beautiful Historic District is situated to the southwest of Absecon Channel in the northern extent of Atlantic City. The district's maritime setting is related to its proximity to the channel rather than the Atlantic Ocean and the district does not have direct views to the ocean or beaches in Atlantic City due to the dense residential and commercial development in the surrounding area.

National Historic Landmark: _____	Local Designation: _____
National Register: _____	Other Designation: _____
New Jersey Register: _____	Other Designation Date: _____
Determination of Eligibility: _____	

Description: The Atlantic City Boardwalk Historic District encompasses approximately 1.4 miles of boardwalk in Atlantic City, stretching from the Atlantic City Convention Hall in the south to the Garden Pier in the north, and contains many of the iconic Atlantic City resorts along the boardwalk. Originally constructed in 1870 the Atlantic City Boardwalk is one of the most famous attractions on the New Jersey shore and boasts the typical attractions seen on boardwalks including amusement park rides, entertainment piers, food and drinks, and the iconic tram cars, in addition to renown hotels and resorts. The Atlantic City Boardwalk Historic District retains sufficient integrity to convey its significance under Criterion A for its association with Entertainment/Recreation and Community Planning and Development in Atlantic City. Despite its fluid construction history, its significance as an enduring vacation destination provides the Atlantic City Historic District Boardwalk with sufficient integrity to convey its eligibility to the NRHP under Criterion A (Entertainment/Recreation).

Setting: The Atlantic City Boardwalk Historic District has a clear maritime setting and is located adjacent to the Atlantic Ocean and overlooks the beaches at Atlantic City.

National Historic Landmark: _____	Local Designation: _____
National Register: _____	Other Designation: _____
New Jersey Register: _____	Other Designation Date: _____
Determination of Eligibility: _____	

Description: Today extending from Red Bank to Lakehurst, the New Jersey Southern Railroad was originally established as the Raritan and Delaware Bay Railroad in 1856 with the intention of creating a North-South route across the state from New York to Philadelphia and eventually down to Virginia. However, the onset of the Civil War and the competition from the Camden and Amboy Railroad prevented this plan from being fully realized with the Raritan and Delaware going bankrupt in 1867. In 1870 the line was absorbed into a new system called the New Jersey Southern Railroad which attempted to complete a connection to the Delaware Bay by way of Vineland, however, New Jersey Southern in turn went bankrupt in 1879 and became part of the Southern Division of the Central Railroad of New Jersey.

Setting: Begins at Red Bank on the Neversink River in Monmouth County and extends inland slightly to the southeast to Lakehurst in Ocean County. The rail line traverses a mixed urban, suburban, and rural landscape with at least some of the railroad crossings at grade. It is still an active rail line. There is no maritime setting.

Description: The Camden and Atlantic Railroad Historic District was determined to be eligible for inclusion in the NRHP by NJHPO in 2012. The district is significant under NRHP Criterion A for its association with the transportation history of Camden and Atlantic Counties.

Setting: Although the rail line crosses bodies of water and connects the barrier island to the mainland, due to its linear nature as a transpiration corridor, the historic district does not have a maritime setting that is sensitive to changes in distant ocean views.

Description: The Bass River State Forest Historic District was determined to be eligible for inclusion in the NRHP by NJHPO in 2004. The district is eligible under NRHP Criterion A for its association with the Civilian Conservation Corp (CCC) which was responsible for planting some of the pine plantations within the district and state forest.

Setting: The areas that comprise the Bass River State Forest Historic District are located inland in Bass River Township, along the Bass River within the Bass River State Forest. The area is characterized by the dense forest that contains some of the tallest growing trees in the New Jersey Pine Barrens region.

Description: The Beach Haven Historic District was listed in the NRHP in 1983 with significance under Criterion C with a period of significance that spans from 1878 to 1879. The district is comprised of late nineteenth and early twentieth century mostly vernacular style homes with some high-style residences inter-mixed.

Setting: Initially conceived as a beach resort in the 1870s, Beach Haven's proximity to the beaches and Atlantic Ocean was an early defining characteristic of the community. The eastern boundary of the district is approximately 500 feet from the beaches at Beach Haven and the Atlantic Ocean.

Description: The Beach Haven Historic District (Boundary Increase and Additional Documentation) constitutes an expansion of the Beach Haven Historic District that was originally listed in the NRHP in 1983. The district was listed on the NRHP in 2014. The addendum expanded the boundary of the original district as well as the period of significance, which spans from 1873 to 1940. Additionally, the boundary increase included the addition of significance under Criterion A for Entertainment/Recreation and Community Planning and Development.

Setting: Initially conceived as a beach resort in the 1870s, Beach Haven's proximity to the beaches and Atlantic Ocean was an early defining characteristic of the community. The eastern boundary of the district is approximately 500 feet from the beaches at Beach Haven and the Atlantic Ocean.

Description: The Greater Beach Haven Historic District was locally designated as a district in 2007 by the Beach Haven Historic Preservation Advisory Commission. The district is significant under NRHP Criterion A (Entertainment/ Recreation, Community Planning and Development) and Criterion C (Architecture) with a period of significance from 1873 to 1957. Note: this local historic district overlaps the National Register-listed Beach Haven Historic District described separately.

Setting: Initially conceived as a beach resort in the 1870s, Beach Haven's proximity to the beaches and Atlantic Ocean was an early defining characteristic of the community. The eastern boundary of the district is approximately 500 feet from the beaches at Beach Haven and the Atlantic Ocean.

Description: The Midway Camps Historic District was determined to be eligible for inclusion in the NRHP by NJHPO in 2001. The district is a grouping of one-story, front-gabled cottages constructed between ca.1935 and ca.1960 as a planned community. The district is significant under Criterion A and C for its architecture and development as a seasonal resort community.

Setting: The Midway Camps Historic District was developed as a seaside, seasonal resort community on the Atlantic Ocean. The district is bounded by the Atlantic Ocean to the east and Central Avenue to the west.

Description: The Island Beach State Park Historic District encompasses the barrier island and State Park from its northern boundary south of 24th Avenue to Barnegat Inlet. The district includes the U.S. Lifesaving Station Number 14, which is listed on the NRHP; Erath/Lease #24, the Aeolium Visitor Center, Gatehouse and Governor's Mansion which were previously identified by NJHPO but not evaluated for listing in the NRHP; the Judge's Shack and Forked River Coast Guard Station No. 112 which have been determined eligible for the NRHP by NJHPO, as well as additional contributing structures. The barrier island was purchased by Henry Phipps to develop a resort community for the upper class; however the resort was not developed and the majority of the island's natural landscape was preserved. The resource retains sufficient integrity to convey its significance under NRHP Criteria A and C.

Setting: The Island Beach State Park Historic District was designed as a potential summer resort and is located on Island Beach and has a clear maritime setting on the barrier island between the Atlantic Ocean and Barnegat Bay.

Description: The North and South Tuckahoe Historic District encompasses the villages of Corbin City to the north and Tuckahoe to the south. The latter area is separately listed on the NRHP as the South Tuckahoe Historic District. The Tuckahoe River divides the two district zones. The northern portion of this district follows Main Street from NJ 50 to the river, and encompasses the mixed commercial and residential center of Corbin City. The architecture north of the river includes Federal, Gothic, and vernacular nineteenth century forms. Despite some infill of non-contributing resources, especially in the north, the North and South Tuckahoe Historic District has sufficient integrity to convey its eligibility to the NRHP under Criterion C.

Setting: The North and South Tuckahoe Historic District is located inland, approximately 8 mi from the Atlantic Coast and lacks a maritime setting.

Description: The Ocean Beach Historic District (Units 1, 2, and 3) was determined to be eligible for inclusion in the NRHP by NJHPO in 2019. The district was developed as a vacation community for working-class families and developed in three stages (Units 1, 2, and 3) between 1946 and 1955. The district is eligible under Criteria A and C as a planned vacation community on the New Jersey shore and for its architecture.

Setting: The eastern boundary of the Ocean Beach Historic District (Units 1, 2, and 3) comprises the beaches at Dover Beaches North, Chadwick Beach, and Island Beach in Lavallette Borough. Dwellings situated on the east side of Sea View Road within each unit have full and unobstructed views of the beaches and the Atlantic Ocean.

Determination of Eligibility: _____	

Description: The Linwood Historic District is centered on a shady stretch of Shore Road and has historic markers announcing the district at either end. The district includes 129 architectural resources built during the period of significance of 1820-1935. These resources are mostly residential and include a wide range of styles popular during this period, from Federal to Craftsman and Colonial Revival. The district was populated by many whose livelihoods were maritime, including sea captains and Thomas Morris, a customs agent whose house represents one of the most intact examples of mid-19th century architecture in the district. The district retains sufficient integrity to retain its listing on the NRHP under Criterion A (Social History) and Criterion C.

Setting: The Linwood Historic District is located inland on mainland New Jersey and does not have a maritime setting.

Registration and Status Dates:	SHPO Opinion: <u>11/24/14</u>
National Historic Landmark: _____	Local Designation: _____
National Register: _____	Other Designation: _____
New Jersey Register: _____	Other Designation Date: _____
Determination of Eligibility: _____	

Description: The Grassy Sound Historic District encompasses a small fishing village established in the late 1800s on the east and west banks of Grassy Sound just north of Route 147 in Cape May County. The majority of the houses are raised on piers over the saltwater marsh and sound, and are connected by wooden gangplanks with no vehicular road access. Most of the houses are one or two-story vernacular in style, but the district also contains one-story Craftsman-style houses as well as one-and-a-half-story Cape Cod residences. Many of the original houses were destroyed or damaged in a 1962 storm, but the district still retains its rare character as small fishing village, and is considered one of the last remaining original fishing villages in New Jersey. The district has previously been determined eligible for the NRHP by the NJHPO.

Setting: The Grassy Sound Historic District is situated in the saltwater marsh and banks of Grassy Sound. Many of the houses are located at sea level, being constructed just over the water or above the saltwater marsh of the sound, and boat piers extend into the sound. The predominate views are of the saltmarsh and Grassy Sound, and the newly constructed bridge extending over the sound that carries Route 147 traffic. While the district is within a maritime setting, the views are of the sound, and the ocean is not visible from the majority of the district.

Determination of Eligibility: _____	

Description: The Shore Road Historic District was evaluated as a part of a county-wide survey of historic resources in North Atlantic County in 1986. The Shore Road Historic District was evaluated for its eligibility for listing in the NRHP of Historic Places. The survey determined the district was eligible for listing in the NRHP under Criterion A for its association with the history and development of Northfield City. The district is also significant under Criterion C.

Setting: The Shore Road Historic District is located on mainland New Jersey, west of the Meadow Land and Lakes Bay. Maritime views and their contributions to the historic setting of the district are focused on Lakes Bay and the adjacent salt marshes.

Description: The Bay Front Historic District Extension includes eight properties on Shore Road, just north of the existing historic district. These include the Somers Point Baptist Church (1886), the former City Hall, now used as the local library (1906), two commercial buildings (1896, 1908), and four houses dating to the turn of the century. The church property includes the current City Hall, a non-contributing resource. As the Bay Front Historic District is largely residential, this extension incorporates some of the non-residential architecture, including municipal, religious, and commercial resources, that was important to the people of that community. The extension has sufficient integrity to convey its eligibility for inclusion in the district under Criterion A (Social History) and Criterion C.

Setting: The Bay Front Historic District Extension is located on Shore Road, approximately 0.2 mi from the edge of Egg Harbor Bay.

Description: The Shore Road Historic District is centered on a historic transportation corridor. The road was finished in 1731 and connected a string of communities on the inland side of Egg Harbor Bay. The district includes residential, commercial, and municipal architecture dating from the mid-nineteenth century through the mid-twentieth century, as well as an eighteenth century house already listed on the NRHP of Historic Places. Some of its properties are contributing elements of the Bay Front Historic District Extension. Despite some infill, the Shore Road Historic District retains sufficient integrity to convey its eligibility to the NRHP under Criterion A (Social History) and Criterion C (Architecture).

Description: The Bay Front Historic District is a neighborhood positioned on a gentle hillside leading from Shore Road down to Egg Harbor Bay and bounded by George Street to the west and Decatur Avenue to the east. The district is significant because of its role in the development of southern New Jersey as a resort area. The homes and businesses in the district offered support for water-related recreation in Egg Harbor Bay, which was a quieter extension of the coastal resort communities developing on the barrier islands. It is also significant as a large, cohesive, and intact group of buildings typical of seaside resort areas; most structures were built during the period of significance (1890-1935), particularly cottage, bungalow, and vernacular styles. The district retains sufficient integrity to retain its listing on the NRHP under Criterion A (Entertainment/ Recreation and Social History) and Criterion C.

Setting: The Bay Front Historic District is bounded by Great Egg Harbor Bay and has a distinctly maritime setting including public access features such as a fishing pier, beach, and parking.

New Jersey Register: <u>8/14/89</u>	Other Designation Date: _____
Determination of Eligibility: _____	

Description: The Marshallville Historic District contains eight contributing buildings and one contributing structure with a period of significance from 1814-1816. The village of Marshallville was an early shipbuilding and glassmaking community on the south side of the Tuckahoe River. Its architecture is primarily Federal with several brick buildings. Brick was not a commonly used material in the region, so the cluster of brick houses is notable. The district has sufficient integrity to retain its listing on the NRHP under Criterion A (Industry, Transportation).

Setting: As a shipbuilding community, the Marshallville Historic District contributed to the maritime setting of coastal New Jersey. The historic district is located inland on the Tuckahoe River.

Description: The South Tuckahoe Historic District encompasses the central area of Tuckahoe village, which played an important part in the development of different modes of transportation, including shipbuilding, railroading, and automobiles. Its architecture dates to between 1810 and 1945, and includes numerous Federal, Gothic, Italianate residences, as well as early twentieth century American Foursquare and Craftsman styles. Non-residential structures of note include a bascule bridge, an early movie theater, and a 1945 diner built to service the automobile traffic. The district has sufficient integrity to retain its listing on the NRHP under Criterion A (Community Development, Transportation) and Criterion C.

Setting: The South Tuckahoe Historic District is located approximately 8 mi from the Atlantic Coast. It lacks a maritime setting and has no views of the ocean.

Description: The Saint Leonard's Tract Historic District is a grouping of approximately 250 residences constructed between 1906 and 1930. The buildings are eligible for the NRHP under Criterion A and C for as a designed community with strict building requirements for its architecture. The St. Leonard's Land Company purchased the land in 1896 and designed the district in a grid pattern.

Setting: The Saint Leonard's Tract Historic District is located between the Atlantic Ocean and the Intercoastal Waterway with many residences having views of one or both bodies of water. The setting of the district on a coastal barrier and the presence of water views along the perimeter of the neighborhood are integral to its character and feeling.

National Historic Landmark: _____	Local Designation: _____
National Register: <u>6/9/88</u>	Other Designation: _____
New Jersey Register: <u>4/26/88</u>	Other Designation Date: _____
Determination of Eligibility: _____	

Description: The John Stafford Historic District is significant under Criterion A as a planned community associated with important figures (including prominent turn-of-the-20th-century real estate developer John Stafford and Philadelphia-based architect Frank Seeburger) of the area and Criterion C for its early twentieth century Colonial Revival architecture. The development included early examples of zoning-type restrictions to ensure consistency and coherence of the neighborhood. Several contributing resources were commissioned works of prominent architects built for local hoteliers. The district was developed as a seaside resort that unlike other places on the shore, was easily accessible by automobile. The periods of significance span 1900 to 1924 and 1925 to 1949.

Setting: The John Stafford Historic District was designed as a resort planned community located on the shoreline of the Atlantic Ocean. The district shares some parallels with other oceanside residential neighborhoods that developed in response to the late 19th century expansion of passenger rail service along the New Jersey shore, but reflects a greater emphasis on roadways designed to accommodate automobiles. The district's relationship to the shoreline and ocean are integral to its planned design.

Description: The Wildwoods Shore Resort District is a large collection of primarily commercial properties serving the vacation industry of the New Jersey shore. The district is centered on Ocean Avenue and bounded on the north by Atlantic Avenue and on the south by the Wildwood Boardwalk. Contributing elements to the district include scores of three-story Doo Wop motels built in the 1950s, 1960s, and 1970s. These motels have recognizable forms, massing, feeling, and association. The district also includes non-historic properties built after the period of significance (1944-1977), though many of these are also commercial properties serving the tourist trade. Despite the infill, the district retains sufficient integrity to convey eligibility to the NRHP under Criterion A (Entertainment/Recreation)

Setting: The Wildwoods Shore Resort Historic District is a grouping of hotels, motels, commercial, and residential buildings developed for the resort community on the New Jersey Shore. The district is bounded to the southeast by the Atlantic Ocean.

New Jersey Register: _____	Other Designation Date: _____
Determination of Eligibility: _____	

Description: The Wildwoods Amusement Piers are amusement park stages associated with the Wildwoods boardwalk. Four are wooden and the fifth is concrete. Ocean Pier (later Hunt's Pier) was constructed in 1903, and the boardwalk was extended to meet this new attraction. Hunt's Pier burned in 1943 and was replaced with a concrete pier in 1957. Other amusement piers were added up through the early 1980s. Currently, most are owned by Morey's Pier, an amusement park company that has been operating rides here since 1968. Though the piers, like the boardwalk, have been rebuilt over time, they retain sufficient integrity to convey their eligibility to the National Register of Historic Places under Criterion A (Entertainment/ Recreation).

Setting: The Wildwoods Amusement Piers have a maritime setting as they extend over the sand of the Wildwoods beach towards the Atlantic Ocean. The piers have unobstructed views of the water.

Description: The Wildwood Boardwalk was constructed in 1921 and replaced an earlier boardwalk that was constructed in 1903. The new boardwalk was situated closer to the ocean than the previous boardwalks constructed in Wildwood. The Wildwood Boardwalk is one of the most famous attractions in the Wildwoods area and boasts the typical attractions seen on boardwalks in the Jersey Shore including amusement park rides, entertainment piers, food and drinks, and the iconic tram cars. The Wildwood Boardwalk retains sufficient integrity to convey its significance under Criterion A for its association with Entertainment/Recreation and Community Planning and Development in Wildwood. The Wildwoods Boardwalk and Piers Historic District encompasses the boardwalk and five piers. The wooden boardwalk was built in stages starting in 1899 and has been altered several times. It has concrete pathways for tramcars that began operation in 1949. The oldest pier (1903) was replaced with a concrete pier after a 1943 fire; the other piers are wooden. These structures are a platform and foot traffic corridor for a kaleidoscope of tourist attractions. Despite their fluid construction history, their significance as an enduring vacation destination provides the Wildwoods Boardwalk and Piers Historic District with sufficient integrity to convey its eligibility to the NRHP under Criterion A (Entertainment/Recreation).

Setting: The Wildwood Boardwalk and Piers Historic District is located 0.25-mile to the northwest of the Atlantic Ocean and overlooks the beaches at Wildwood. While the boardwalk is farther away from the ocean than other boardwalks on the Jersey Shore, the boardwalk still has full views of the beach and ocean.

Determination of Eligibility: 6/23/05	Other Designation Date: _____

Description: The Atlantic City Railroad Cape May Division Historic District was determined to be eligible for listing in the NRHP by NJHPO in 2005. The period of significance spans from 1893 to 1942. Contributing resources within the district include timber trestles, metal bridges, semaphore signals, as well as four extant stations and two interlocking towers. The railroad is significant under NRHP Criterion A for its association with the history of Transportation in Atlantic, Camden, and Cape May counties. The railroad is also significant under Criterion C.

Setting: Although the rail line crosses bodies of water, due to its linear nature as a transpiration corridor, the historic district does not have a maritime setting.

Description: The Ocean City Boardwalk was originally constructed in 1905, replacing a wooden walkway that was constructed in 1880. Hotels, recreational, and entertainment venues were constructed in the early twentieth century. In 1927, the boardwalk and many surrounding buildings were destroyed by fire. When the boardwalk was reconstructed in 1928, it was moved closer to the Atlantic Ocean. Although portions of the boardwalk have been replaced, the Ocean City Boardwalk retains sufficient integrity to convey its significance under Criterion A for its association with Entertainment/ Recreation and Community Planning and Development in Ocean City.

Setting: The Ocean City Boardwalk has a clear maritime setting and is located adjacent to the Atlantic Ocean and overlooks the beaches at Ocean City.

Description: The Dr. Jonathan Pitney House was constructed ca. 1799 and enlarged in 1848. It is listed in the NRHP under Criterion B in the areas of transportation and politics/government for its association with Dr. Jonathan Pitney. Dr. Pitney was an influential politician and businessman and served a key role in establishing Atlantic County in 1837, establishing the first railroad from Camden to Atlantic City in 1854, founding Atlantic City in 1854, and constructing the first lighthouse on Absecon Island in Atlantic City in 1857. The house is also a contributing resource to the NRHP-Eligible North Shore Road Historic District.

Exterior Description: The house at 4700 Atlantic Avenue is a two-and-a-half story, three-bay wide, Classical Revival residence. The house is clad in stucco and is capped by a side gable roof covered in asphalt shingles. The façade features a prominent two-story triangular pedimented portico featuring brackets and dentils supported by Corinthian columns and pilasters. The main entrance consists of multi-pane French doors with an elaborate surround and entablature. The main entrance is capped by a second-story French door balcony with a wrought iron railing.

Interior Description: N/A

Setting: The house at 4700 Atlantic Avenue is situated in a dense residential neighborhood consisting of single-family residences and multi-story apartments and condominiums within the first block of houses west of the Atlantic Ocean. The house is oriented with the façade facing Atlantic Avenue, a busy four-lane road within the area. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The residence at 108 S Raleigh Avenue first appears on a 1921 Sanborn Fire Insurance Map of Atlantic City which suggests a construction date of circa 1920. It was the only residence depicted on South Raleigh Avenue to the southeast of Atlantic Avenue at this time and according to the map the building was constructed of hollow structural tile and included a wood frame porch attached to the northeast (front) elevation and a garage attached to the southeast (side) elevation. Historic-era aerial photographs reveal that by 1930 every lot on South Raleigh Avenue to the southeast of Atlantic Avenue contained a house. A large condominium building was constructed to the northeast of South Raleigh Avenue by 1957 and the surrounding area consisted of dense residential development which is extant today (LOC, 2022; NETR, 2022).

Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: Based on exterior analysis only, the residence at 4700 Atlantic Avenue appears to meet Criterion C in the area of Architecture as an example of a residence in the Classical Revival style.

Exterior Description: This resource is a two-and-a-half-story Colonial Revival residence set on a raised brick foundation, is clad in stucco, and is capped by a hip roof covered in asphalt shingles. The residence features a full-width front porch with paired and triple Doric columns resting on a brick floor and supporting a hip roof. Hip-roof dormers are located on each elevation, and decorative brackets are present on the roof, porch, and dormer eaves.

Interior Description: N/A

Setting: This resource is located approximately 0.1 mile from the ocean, in the first block of residences extending from the Atlantic City Boardwalk. The building's primary orientation faces northeast towards South Montgomery Avenue and views of the neighboring residences are predominant, with portions of the Boardwalk and dunes fronting the ocean visible from ground level. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. ELIGIBILITY WORKSHEET

Historic Sites #:

History: The residence at 104 S Montgomery Avenue first appears on a 1920 aerial photograph of Atlantic City, suggesting a construction date of circa 1915. The photograph also reveals the surrounding neighborhood consisted of dense residential development along the streets in the greater vicinity. By 1970, two large high-rise condominium complexes were constructed to the northeast along South Plaze Place and to the southwest at Jackson Avenue and the boardwalk. The photograph also indicates at least two dwellings at the end of South Montgomery Avenue had been demolished (NETRonline, 2023).

Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. Type:	<u>N/A</u>	Bays:	<u>3</u>
Roof Finish Materials:	<u>Tile, Spanish</u>		
Exterior Finish Materials	<u>Stucco</u>		

Exterior Description: A two-story Spanish Colonial dwelling with stucco and a hipped roof with clay tile. There are two projecting bays on the facade connected by a one-story arcade entry porch supported by Corinthian columns. The windows have round arch surrounds on the second story and decorative entablatures on the first. A garage is attached to the northwest (side) elevation.

Interior Description: N/A

Setting: The resource is located immediately to the northwest of the Atlantic City Boardwalk and beaches. Although the house is oriented toward South Montgomery Avenue and not the ocean, it has a clear maritime setting as the views from the southeast (side) elevation offer unobstructed views of the ocean. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: According to Sotheby's Realty, Casa De Felicidad was designed by famed architect Addison Mitzner in 1926. If true, that would place the design of the house during Mitzner's most productive period (1920-1926). Mitzner's work in the early 20th century, particularly in Palm Beach, FL during the 1920s, helped popularize the Mediterranean Revival style among the nation's elite (Sotheby's Realty, 2022; Maddex, 1985).

Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: Based on exterior analysis only, the residence appears to meet Criterion C in the area of Architecture as an example of the Spanish Colonial Revival style in domestic architecture.

Exterior Description: This resource is a two-story Mediterranean Revival residence clad in stucco and capped by a hip roof covered in clay tiles. The residence features arched windows on the facade, and decorative floral motif scrollwork in the stucco is present around ribbon windows and the main entrance on a one-story flat-roof wing on the facade, and decorative scrollwork “plaques” are located between bays on the second floor. The eaves feature exposed brackets.

Interior Description: N/A

Setting: This resource is located approximately 0.1 mile from the ocean, in the first block of residences extending from the Atlantic City Boardwalk. The building’s primary orientation faces northeast towards South Raleigh Avenue and views of the neighboring residences and a non-historic high-rise directly across the street predominate. The house is set further back from the road than its neighboring houses and is lower in height. Views of the Boardwalk and dunes fronting the ocean are visible from the sidewalk in front of the house, but views of the ocean are not present. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The residence at 116 S Ridgeway Avenue first appears on a 1921 Sanborn Fire Insurance Map indicating a construction year of ca. 1920. This block of Ridgeway Avenue included both masonry and wood frame construction dwellings and the sprawling complex of the Children's Sea Shore House was located to the southwest between South Richmond Avenue and South Annapolis Avenue. Throughout the 20th century, the surrounding neighborhood saw small scale demolition and infill construction; however, the greater vicinity has generally remained a dense residential neighborhood (LOC, 2022; NETR, 2022).

Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. Description: The Knife and Fork Inn is a four-story restaurant situated at the busy intersection of Atlantic, Albany, and Pacific Avenues. It was built in 1912 in an exuberant Flemish Revival style and features three stepped parapets on the façade with more on the sides, a red tile roof, white stucco walls, and numerous “knife and fork” ornaments mounted on the walls. The restaurant began its existence as a bar of the same name that closed for good during prohibition. It is an Atlantic City icon with a colorful history and retains sufficient integrity to convey eligibility for the NRHP under Criterion A (Commerce) and Criterion C (Architecture).

Description: The Ritz Carlton Hotel is an 18-story building clad in brick that opened in June of 1921. Constructed with elements of the Beaux Arts style, the building was a prominent hotel in Atlantic City in the 1920s, and housed prominent guests such as Calvin Coolidge, Warren G. Harding, and Al Capone. The hotel was converted to army barracks during World War II, and in 1969 was converted into apartments. In 1982 the building was converted into condominiums. Today the building survives as a rare representation of 1920s hotel architecture on the Atlantic City Boardwalk.

Description: The Warner Theatre was constructed on the Atlantic City Boardwalk in 1929 as a movie theatre and showroom. Constructed by the prominent Philadelphia architectural firm Hoffman-Henon Company, known for their theatre designs, the building exhibits Spanish Revival and Moorish elements. In later years, the building was converted to a bowling alley before having the auditorium and main lobby demolished in the late 1970s to make room for casino expansion. Today, the original facade is all that remains of the building.

Type:	<u>N/A</u>	Bays:	<u>5</u>
Roof Finish Materials:	<u>Unknown</u>		
Exterior Finish Materials	<u>Stone, Ashlar</u>		

Exterior Description: The Carnegie Library (now known as the Carnegie Center) was designed in the Italian Renaissance style by Albert Randolph Ross and completed in 1904. The ashlar stone building is three stories with a flat roof. The elaborate façade showcases classical elements and style-defining features such as the rusticated first story and is made more impressive by the semi-circular, domed wings on either side. The main block is five bays with a center entrance topped by a prominent entablature with a broken pediment. The center three upper-story bays are inset with engaged Ionic columns. The pattern is repeated on the wings with Ionic pilasters. The fenestration is regularly spaced with multilight aluminum sash singly, paired, or tripartite.

Interior Description: N/A

Setting: The Carnegie Library is located one long block from the Atlantic Ocean and was constructed as a library for the resort community. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The Carnegie Library (now known as the Carnegie Center) was one of 36 New Jersey libraries partially funded by Andrew Carnegie 1900 and 1917. Carnegie's philanthropy was a part of a larger library building campaign he undertook throughout the United States and western Europe in the late nineteenth and early twentieth centuries. While the Carnegie Public Library Program provided the funds to construct the libraries, it was the responsibility of the communities to provide the land and to demonstrate there were adequate funds and staff for the operation of the library. The library was designed in the Italian Renaissance style by Albert Randolph Ross and completed in 1904. Shortly after its completion, Carnegie began scaling back the size and stylistic flourishes of his libraries to allow for more funds to be used for collections. The library was in operation until 1985 when services were moved to a larger and more modern building. The building sat vacant for five years before it was acquired and restored by the Casino Reinvestment and Development Authority (CRDA). In 2009, the CRDA transferred ownership of the building to Stockton University in Atlantic City for use as a new Academic Center to be used specifically for business-related curricula, as stipulated by a covenant in the deed. During the COVID-19 pandemic, the University was unable to uphold the specifications of the covenant, and as a result ownership of the building was transferred to the city. The city plans to use the building to provide services and academic support to at-risk youth (Lorenzen, 1999; Hazard, 2013; Stockton University, 2022).

Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: Based on exterior analysis only, the library appears to be eligible for the NRHP under Criterion C. As one of 1,689 libraries funded by Carnegie during the Golden Age of the American Library System, this resource is also eligible under Criterion A (Education).

Description: Brighton Park is located just to the north of the Atlantic City Boardwalk Historic District and just to the south of the contributing Claridge Hotel. The park is visible in aerial photographs dating to 1920, with the current concrete and brick walkways and decorative stone and concrete fountain in the middle of the park adhering to the historic park layout and design. The southern portion of the park consists of a stepped concrete amphitheater added between 1984 and 1995, and a Korean War Memorial that was dedicated in 2000.

Hardscape:	<u>Walkways, Poured Concrete</u>		
Plantings:	<u>Mature Hardwoods; Shrubbery</u>		
Other Features:	<u>Fountain; Other</u>		

Description: Brighton Park is an approximately 2.4-acre urban public park built in 1896 and located on the northwest side of the Atlantic City Boardwalk between Park Place and South Indiana Avenue. The park is framed by a simple black metal fence set atop a low stone wall. Simple square pillars topped with faux-gold globes are located at the four corners of the park's boundary and at the southeast entrance fronting Park Place. A fountain set within a shallow octagonal pool is roughly off-center within the park. Trees line the northeast and southwest edges of the park and there is a central pathway through the park. A non-historic amphitheater from circa 1986 and a Korean War memorial from circa 2000 were installed in the southeastern limit of the park on the southeast side of Park Place fronting the Atlantic City Boardwalk.

Setting: Brighton Park is located on the Atlantic City Boardwalk. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Brighton Park was originally owned by George F. Lee and Hamilton F. Disston who owned the Brighton Hotel (not extant) which was immediately adjacent to the park. At some point before 1896, the land was deeded to Atlantic City for public use. The 1896 Sanborn map shows the current tract labeled PARK with no noted landscaping. Historic photos and aerials from the 1920s show the current layout minus the mature plantings (Sanborn Map Company, 1896). The fountain in the center of the park was erected by GE in honor of the 50th anniversary of the lightbulb. It illuminated a 30-foot jet of water with up to 72 color effects. The Boardwalk end of the park has a non-historic amphitheater (ca.1984-1995) and a Korean War memorial (2000) (Sokolic and Ruffolo, 2006).

Significance: This resource is recommended as a contributing site to the Atlantic City Boardwalk Historic District.

Exterior Description: The Inn of the Irish Pub is a six-story brick hotel and bar constructed in 1903 as the Elmwood Hotel. The building is seven bays by three bays with a pressed brick façade. Windows on the façade are evenly spaced and have splayed lintels with keystones. There is a two-story porch across the façade with a faux paneled and glazed street level and an open-air second. Historic images indicate that the porch has been heavily altered.

Interior Description: N/A

Setting: The Inn of the Irish Pub is located approximately 0.1 mile from the Atlantic Ocean, in the first block of buildings extending north from the Atlantic City Boardwalk. The building's primary orientation is towards St. James Place and views of the boardwalk, streetscape, and neighboring hotels are predominant from ground level. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The resource is a six-story brick hotel and bar constructed in 1903 as the Elmwood Hotel. One of the most notable historic hotels in Atlantic City, it was a known speakeasy during Prohibition and has housed notable guests throughout its years including Joe DiMaggio, a frequent visitor. The Elmwood Hotel operated until 1967, when it became the Feeley's Hotel. In 1972, the Irish Pub purchased the bar space within the building, and the Irish Pub and Feeley's Hotel operated in concert until 1972 when the owners of the Irish Pub took over complete operations (Atlantic City Experience, 2022).

Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: Based on exterior analysis only, the resource is recommended eligible for the NRHP under Criteria A, under Community Planning and Development for its association as an early and notable hotel along the Atlantic City Boardwalk, and C under Architecture as an excellent surviving example of Colonial Revival hotel architecture in Atlantic City.

Historic Sites #:

History: The commercial building at 1427 Boardwalk first appears on a 1921 Sanborn Fire Insurance Map, although a building tenant or business is not specified. Further, no building tenants or businesses were included on any Sanborn Fire Insurance Maps available for the property (LOC, 2022). Beginning in the 1970s, mass demolitions brought on by urban renewal efforts took place along the boardwalk and in the larger vicinity. The commercial building at 1427 Boardwalk stands as an increasingly rare example of an early twentieth-century high-style commercial building.

Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: Based on exterior analysis only, the resource appears to meet Criterion C as an example of an Art Deco and Exotic Revival-style commercial building.

BUILDING ATTACHMENT

Historic Sites #:

Common Name:	124 Atlantic Avenue		
Historic Name:	N/A		
Present Use:	Residential, permanent		
Historic Use:	Residential, permanent		
Construction Date:	ca. 1910	Source:	Stylistic Evidence; NETR, 2022
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Excellent
Builder:	N/A	Remaining Historic Fabric:	High
Style:	Dutch Colonial Revival		
Form:	Gable Front	Stories:	2.5
Type:	N/A	Bays:	4
Roof Finish Materials:	Asphalt shingle		
Exterior Finish Materials	Brick, Running Bond		

Exterior Description: The building at 124 Atlantic Avenue is a two-and-one-half-story Dutch Colonial Revival residence with brick cladding on the first and second stories and wood shingle on the overhanging half-story. The roof is a combined cross-gable and gambrel. The main entry and a curved porch are on the second story. Ionic columns support the porch and rest on a projecting first-story bay. There is a Palladian window in the gable of the façade, while the remaining fenestration is both flat and segmented arch.

Interior Description: N/A

Setting: This resource is located approximately 430 feet west of the Absecon Inlet and approximately 0.3 miles north of the Atlantic Ocean. The façade and associated porches are oriented towards Atlantic Avenue, roughly 90 degrees from the Projects, but the demolition of intervening buildings once located to the east of the house substantially increased the ocean views. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The residence at 124 Atlantic Avenue first appears on a 1920 aerial photograph of Atlantic City; however, a review of the 1906 Sanborn Fire Insurance Map of this section of Atlantic City indicates the block was under development which suggests a construction date for the resource of circa 1910. Further review of historic aerial photographs indicates this section of Atlantic City was densely built with residential and commercial buildings throughout the first half of the twentieth century. Beginning in the middle of the 1970s, large-scale urban renewal efforts resulted in mass demolition in the neighborhood which dramatically changed the character of the neighborhood. Demolition continued during the 1980s and 1990s, although by 2002 some redevelopment efforts began along John Kelley Circle to the northwest. However, the residence at 124 Atlantic Avenue stands as one of the few early twentieth century dwellings remaining in this area of Atlantic City (NETR, 2023).

Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: Based on exterior analysis only, the residence at 124 Atlantic Avenue appears to meet Criterion C in the area of Architecture as an example of a residence in the Dutch Colonial Revival style.

Description: The Absecon Lighthouse was constructed in 1856 under the direction of Lt. George Meade, who later commanded Union forces at the Battle of Gettysburg. Constructed of iron and brick, it rises 171 feet tall, is 27 feet in diameter at the base, and is 13 feet, seven-and-a-half inches at the lens chamber. The roof is pyramidal and caps rectangular glass panes with iron frames. The lighthouse was decommissioned in 1933 and was moved to its current location from its original site closer to the inlet.

Description: The Barnegat Lighthouse was built between 1855 and 1857 by Lt. George Meade, an Army engineer and future Civil War General. The lighthouse is 163 feet tall and was built to replace a much shorter structure that was destroyed by coastal erosion. The lighthouse operated with its original 12 foot tall Fresnel lens from 1959 to 1927, after which other lighting apparatus were used until the light was decommissioned in 1944. The property was given to the State of New Jersey and shortly thereafter the surrounding municipality changed its name to Barnegat Light.

BUILDING ATTACHMENT

Historic Sites #:

Common Name:	101 Dolphin Avenue		
Historic Name:	N/A		
Present Use:	Residential, permanent		
Historic Use:	Residential, permanent		
Construction Date:	ca. 1931	Source:	NETR, 2022.
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Excellent
Builder:	N/A	Remaining Historic Fabric:	High
Style:	N/A		
Form:	Center Hall	Stories:	2
Type:	N/A	Bays:	6
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Wood, Shingles		

Exterior Description: The resource at 101 Dolphin Avenue is a two-and-a-half story circa 1900 Colonial Revival with a side gable roof. The roof features three gable roof dormers and a large interior brick chimney. The dwelling measures six bays wide and three bays deep and is clad in wood shingles. The fenestration consists of multi-pane casement windows. The building is partially obstructed by trees but appears to have a center hall plan.

Interior Description: N/A

Setting: The resource fronts the northwest side of South Atlantic Avenue and is located approximately 175 feet from the beach at Beach Haven and the ocean. Although the dwelling has a maritime setting, views of the ocean are obscured by raised sand dunes and large, non-historic dwellings fronting the southeast side of South Atlantic Avenue. Historic aerial imagery shows that Beach Haven was almost entirely developed by 1920, and the entire borough was completely built out by 1956. The Great Atlantic Hurricane of 1944 caused extensive damage to the borough's hotels and boardwalk and another storm in 1962 resulted in a new zoning law requiring any new constructions to be built on stilts. Beach Haven continues to be a popular seasonal beach community (Beach Haven, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Sanborn map analysis revealed that the house was not yet present, and the area was largely undeveloped in 1922. The house appears in an aerial photograph from 1931. At that point, the majority of the neighborhood was filled with homes (LOC, 2022; NETR, 2022).

Beach Haven Borough is in the extreme southern extent of Ocean County in the southern portion of Long Beach Island. As early as 1690, Euro-American settlers used Long Beach Island seasonally for fishing, whaling, gathering plants, and harvesting sea salt, but present-day Beach Haven remained relatively undeveloped until the 1870s. In 1871, Captain Tilton Fox bought the Harvey Cedars Life Saving Station, moved it to Beach Haven, and opened it as the Hotel de Crab. The development of cottages, hotels, and roads accelerated over the next decades, cementing Beach Haven as a popular summer getaway for wealthy people from Philadelphia. In 1886, Beach Haven became accessible directly by railroad with the construction of the Long Beach Railroad. In 1880, Beach Haven was incorporated as a borough. By the turn of the twentieth century, Beach Haven had a flourishing commercial economy and tourism industry. In 1914, Beach Haven became accessible by automobile with the construction of a causeway over Barnegat Bay and a boulevard to Beach Haven. The causeway was met with great excitement and supported continued development in Beach Haven in the subsequent decades. (Long Beach Island, 2023; Beach Haven, 2023; U.S. Lifesaving Service, 2023; Heritage Studies, 1981).

Significance: Based on exterior analysis only, the residence at 101 Dolphin Avenue appears to meet Criterion C in the area of Architecture as an example of a residence in the Colonial Revival style.

Exterior Description: The building at 2201 Bayshore is a one-and-one-half-story side-gabled dwelling with steep rooflines and elements of a Tudor cottage. The house has a slate roof and is clad in stucco. A chimney stack and hipped-roof dormer are centrally located above a roof extension over a half-enclosed entry porch. A one-story side wing has a rooftop deck.

Interior Description: N/A

Setting: 2201 Bayshore Avenue is located directly on Absecon Bay and the Bonita Tideway, approximately 0.61 mile to the northwest of Brigantine Beach and the Atlantic Ocean. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The resource first appears on a 1931 aerial photograph of Brigantine which, along with the stylistic evidence, suggests a construction date of circa 1930. Brigantine was developed in the early 1920s when the Island Development Company undertook large-scale residential and commercial development on most of the island. The city was formally incorporated during this period in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924 which promoted visitation to the land. Brigantine saw its largest period of growth between 1930 and 1960 and continues to be a popular family beach destination (NETR, 2022; Weichert Realtors, 2022).

The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: Based on exterior analysis only, the resource appears to meet Criterion C as an example of a Tudor-style dwelling.

Roof Finish Materials: Tile, Spanish

Exterior Finish Materials Stucco

Exterior Description: The house at 2707 West Brigantine Avenue is a two-story stucco dwelling designed in the Spanish Colonial Revival style. It exhibits the character-defining features of the style with clay roof tile, a multi-gabled roofline, wing walls, a tower, an enclosed courtyard, and overall complex massing. The building is divided into three volumes with a main cross-gabled block. An off-center gable-front block projects from the street-facing elevation. This is followed by a hipped-roof volume that is engaged to the corner of the front-gabled volume, between which is a folly tower.

Interior Description: N/A

Setting: 2707 West Brigantine Avenue is located in the center of the barrier island between Absecon Bay and the Bonita Tideway and the Atlantic Ocean. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). ELIGIBILITY WORKSHEET

Historic Sites #:

History: According to a previous survey form, the home was constructed in 1927 for H.G. Harris, president of the Island Development Company. The real estate development company was responsible for the most significant development in Brigantine during the early 1920s. Brigantine was formally incorporated during this period in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924 which promoted visitation to the land. The resource first appears in a 1931 aerial photograph of Brigantine that also depicts the beginning of development in the community. The resource was contained within two parcels lined with landscaping. By the late 1950s, only two additional houses were located within the block; however, the surrounding blocks exhibited ongoing development. Today, this area of Brigantine is predominantly residential (The History Store, 1986:14; HABS, 1991; NETR, 2023).

The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: Based on exterior analysis only, the resource appears to meet Criterion C as an example of a Spanish Colonial Revival-style dwelling.

Brigantine saw its largest period of growth between 1930 and 1960 and continues to be a popular family beach destination (NETR, 2023; Weichert Realtors, 2022).

The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: Based on exterior analysis only, the resource appears to meet Criterion C as an example of a Chateausque-style dwelling.

Exterior Description: The building at 200 18th Street South is a two-story Mission-style dwelling with a hipped roof and stucco cladding. The building features hipped roof dormers, brackets in the eaves, exposed rafter tails, round-arch fenestration on the first story, and a brick foundation. The entry is on the side elevation with an arched hood. The windows are 1/1 replacement sash.

Interior Description: N/A

Setting: The resource is in the center of the barrier island between Absecon Bay and the Bonita Tideway and the Atlantic Ocean. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The resource first appears on a 1931 aerial photograph of Brigantine which, along with the stylistic evidence, suggests a construction date of ca. 1925. Brigantine was developed in the early 1920s when the Island Development Company undertook large-scale residential and commercial development on most of the island. The city was formally incorporated during this period in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924 which promoted visitation to the land. Brigantine saw its largest period of growth between 1930 and 1960 and continues to be a popular family beach destination (NETR, 2023; Weichert Realtors, 2022).

The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. ELIGIBILITY WORKSHEET

Historic Sites #:

History: The former Central School in Brigantine, which currently functions as the Brigantine Branch Library, was opened in 1926. The school housed all public school students until 1974 when the North Middle School was opened for grades five through eight. The Kindergarten through Fourth Grade students used the school until 1992 when the North School was opened. In 1995, the building reopened as the Brigantine Library (Schweibert, 2017).

The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: Based on exterior analysis only, the resource retains sufficient integrity to convey its significance under Criterion A for its association with Education in Brigantine and Atlantic County.

Exterior Description: The Brigantine Hotel is a ten-story brick-clad Art Deco-style hotel built in 1927. The first and second stories project beyond the wall plane and have undergone some alterations and accretions, but their historic form is retained. The upper stories are divided into five bays on the facade by raised piers. The piers step back at the roofline and terminate with metal coping. Horizontal banding articulates the ninth and tenth stories. Windows are replacement sash, but openings retain symmetrical rhythm.

Interior Description: N/A

Setting: The Brigantine Hotel is a 10-story high-rise hotel situated on the southeast side of Ocean Avenue between 14th Street South and 15th Street South bordering the beach. The hotel was constructed as a seaside hotel with an associated beach area. The hotel has unobstructed views of Brigantine Beach and the Atlantic Ocean and is an imposing building that can be seen from most areas of Brigantine Beach. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The Brigantine Hotel, constructed in 1927 in the Art Deco style, was for a time a prominent desegregated hotel where both white and black guests could enjoy the associated beachfront. Purchased by the racially integrated Peace Mission Movement led by the Black pastor Father Divine, the Brigantine for a brief time in the 1940s provided inexpensive lodging and meals, and beach access for its followers and interested guests of both races. Seen by many as a racially integrated cult, the Mission encountered resistance in Brigantine City. Under pressure, the Mission sold the hotel to the Atlantic City-based Black beauty product magnet, Sara Washington Spencer, who kept the hotel and beach open to both Black and White guests (Roi, 1948; Schultz and Kelly, 2002; Lurie and Mappen, 2004).

The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: The Brigantine Hotel is significant under NRHP Criterion A for its association with Entertainment/Recreation, African American Heritage, and Community Planning and Development. The resource retains architectural integrity and is also eligible under Criterion C as an example of an Art Deco hotel.

Exterior Finish Materials	<u>Stucco</u>		

Exterior Description: St. Thomas the Apostle Church is a Mission/Spanish Revival church constructed in 1927. The building has a rectangular plan, a hipped roof, and stucco cladding. A three-part arcade entry is flanked by engaged towers with decoratively screened windows and balconettes. The top of each tower is stepped back and terminates with an octagonal roof. Round arch windows on the side elevations are separated by raised piers.

Interior Description: N/A

Setting: The St. Thomas Catholic Church is located approximately 800 feet from Brigantine Beach and the Atlantic Ocean. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: St. Thomas was designed by George Brooks of Perth Amboy in 1927. The first pastor was Msgr. William T. Dittrich. The church was closed and fell into federal ownership during the late 30s and early 40s and was used, among other things, as a horse stable by the US Coast Guard. The dilapidated church was reacquired by the parish in 1947 and renovated. The church was lengthened to increase its capacity in 1956. The extension was designed by Joseph G. Carchidi of Trenton (History of St. Thomas Parish, 2022).

The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: Based on exterior analysis only, the resource appears to meet Criterion C as an example of the Spanish Colonial Revival style in ecclesiastical architecture.

Exterior Description: The Isaac and Keziah (Abbot) Smith House is a two-story Federal style residence set far back from the road. The property includes a historic (though likely not original) barn. From the public right of way, it appears that the residence is a side-gabled two-story frame dwelling with an end chimney. The façade is four bays symmetrically divided into two groups. The entrance is located between bays in the right grouping. A one-story shed-roof projection extends from one side.

Interior Description: N/A

Setting: The Isaac and Keziah (Abbot) Smith House is located on the Great Egg Harbor River approximately 9 miles from the Atlantic Ocean. Egg Harbor Township is in the southeastern extent of Atlantic County and is bordered on the southwest by the Great Egg Harbor River. The township consists of several unincorporated communities, including Bargaintown, Cardiff, English Creek, Farmington, Scullville (formerly known as Jeffers), Steelmanville, and West Atlantic City, as well as part of McKee City. Historic aerial imagery shows the slow growth of the township through the mid-twentieth century, including the construction of the Naval Air Station (NAS) Atlantic City in the 1940s, the construction of the Atlantic City Expressway in the 1960s, and the expansion of suburbs throughout the township in the mid- and late-twentieth century. Today, Egg Harbor Township remains primarily agricultural land, with small centers of commerce in the communities and additional undeveloped natural areas used for recreation (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: From previous form: Family lore states the house was built by Isaac Smith (1791-1875) and his wife Kezia Abbott (1798-1866). The presence of machine-cut, machine-headed nails in the attic floor suggests a construction date of ca. 1815-1830, a date that is consistent with the late Federal style of the mantel in the parlor. The house appears to stand on land sold to Elisha Smith (ca. 1700-1755) by Samuel Scull ca. 1740, although a formal deed was not executed until 1755. [NJ State Archives, colonial deeds book A-F, p. 113]. Elisha Smith, thought to be the son of Simon Smith from Hadley, CT, was the first of the family to settle in Gloucester (now Atlantic) County. The house is still owned by members of the original Smith family (Berkey, 2017).

The name "Egg Harbor" was given to the area due to the abundance of shorebird and waterfowl eggs in the seventeenth century. Euro-Americans settled several small farming communities in the eighteenth century within the present-day township, including Bargaintown, English Creek, Steelmanville, and Sculville. Many of these communities had grist mills, sawmills, blacksmith shops, churches, and taverns. The western boundary of the township was established in 1761 with the area called Great Egg-Harbour Township, and Egg Harbor Township was incorporated in 1798. Boat-building was a major industry in Egg Harbor Township in the nineteenth century, and many of the communities had shipyards. The Camden and Atlantic Railroad and West Jersey Railroad were built through Egg Harbor Township in the mid-nineteenth century, connecting Atlantic City to Camden. Communities such as English Creek, Farmington, Cardiff, McKee City, and West Atlantic City grew up and expanded around the railroad stations. During the second half of the nineteenth century, ten cities and townships were formed from Egg Harbor Township. Through the twentieth century, the township remained relatively rural and agricultural. The mid- and late-twentieth century saw the improvement of road infrastructure throughout the township, including the growth of suburban developments. The Naval Air Station (NAS) Atlantic City was built in the northern part of the township in 1942. The NAS was decommissioned in 1958 and now operates as a commercial airport, Air National Guard Base, and Coast Guard Air Station (Cullen et al., 1963; Rand McNally, 1897; Egg Harbor, 2019; Snyder, 2004; US Army Corps, 2023).

Significance: Based on exterior analysis only, the resource appears to meet Criterion C as an example of a Federal-style residence.

Description: The L.N. Renault and Sons Winery was listed on the NRHP in 1973. It is the oldest active winery in New Jersey with vineyards first planted by Louis Nicolas Renault in 1864. The vineyard was opened to the public in 1870 and was for a time the largest producer of champagne in the United States. During the 1980s, the vineyard expanded to include a resort, restaurant, and hotel. A golf course was added to the grounds in 2004. The winery retains sufficient integrity to convey its significance under NRHP Criterion A for its association with the history of wine making in New Jersey.

Exterior Description: The Germania Gunning Club is a one-story former school building constructed on a rectangular plan with a side-gabled roof and vinyl siding. The façade is devoid of windows except for either side of a projecting entry foyer which features 1/1 replacement sash. The projection has an overhanging gable-on-hip roof supported by simple columns. The side elevations are two bays deep with 1/1 replacement sash. On the rear elevation, the roof slightly changes pitch and extends over a one-story projecting bay. A brick chimney is located at the juncture of the projecting bay and the rear elevation. The former Germania Farm School Bell is located out front of the building on a brick pedestal and covered by a gabled roof.

Interior Description: N/A

Setting: The Germania Gunning Club is located inland in Galloway Township in the eastern quadrant of the intersection of West Moss Mill Road and Prague Avenue. The former school has a rural setting. The Germania Gunning Club is in the former community of Germania in Galloway Township. Germania was settled by German immigrants who came to this area of Galloway Township in the 1840s from Philadelphia (to the northwest). Galloway Township is in eastern Atlantic County and is bordered on the northeast by the Mullica River. The township consists of several unincorporated communities, including Absecon Highlands, Cologne, Conoverstown, Germania, Higbeetown, Leeds Point, Oceanville, Pinehurst, Pomona, Smithville, South Egg Harbor, and the "Township Center." Historic aerial imagery shows the slow growth of the township through the mid-twentieth century, including the construction of the NAS 1940s, the construction of the Garden State Parkway in the 1950s, the construction of Stockton University in the 1970s, and the expansion of suburbs throughout the township in the mid- and late-twentieth century. Today, Galloway Township remains primarily agricultural land, with small centers of commerce in the communities and additional undeveloped natural areas used for recreation (Galloway Township Historical Society, 2023; Galloway Township, 2009; NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: In 1909, Galloway Township was divided into school districts. The hamlet of Germania was designated district number 8. The number 8 school was located along Cologne Avenue. The Germania Gunning Club building was constructed in 1909 and was known as the Germania Farm School (also known as the Moss Mill Road School). A datestone on the school bell pedestal indicates that the building continued as a school until 1930. It is potentially at this point that the building was converted for use as a private sporting club. A photograph from 1966 shows members of the gunning club standing with their kills along the rear exterior wall of the current building (Galloway Township Historical Society, 2023; Federico and McHenry, 2011).

The first permanent Euro-American settlement in the township was Leeds Point, settled in 1678. Galloway Township was formed in 1774 from Egg Harbor Township. In the second half of the eighteenth century, development centered around small communities such as Smithville, Leeds Point, Oceanville, Higbeeville, Cologne, Pomona, Germania, and Conoverstown. In 1821, a road was built through the present-day township connecting Camden to Absecon along present-day Route 30. In 1854, the Camden and Atlantic Railroad was built connecting Atlantic City to Camden through Galloway Township. Communities such as Germania, Cologne, Pomona, and Oceanville grew up and expanded around the railroad stations that were established over the next decades. For much of the nineteenth century, Absecon was the commercial center of the township until it was incorporated as its own city in 1872. In addition to Absecon, several other cities were formed from the township in the late-nineteenth and early-twentieth century. Through the twentieth century, the township remained relatively rural and agricultural. The mid- and late-twentieth saw the improvement of road infrastructure through the township and the growth of suburban developments in parts of the township. Naval Air Station (NAS) Atlantic City was built partially in the southern part of the township in 1942. The NAS was decommissioned in 1958 and now operates as a commercial airport, Air National Guard Base, and Coast Guard Air Station (Galloway Township Historical Society, 2023; Snyder, 2004; Rand McNally, 1897; US Army Corps, 2023).

Significance: Based on exterior analysis only, the resource is significant under National Register Criterion A for its association with Education in Galloway Township and as an example of a private sporting club in Galloway Township.

Exterior Description: The Seaview Golf Club consists of a 296-room hotel and Colonial Revival-style clubhouse set on 697 acres including two 18-hole golf courses. The hotel and clubhouse is a complex of building volumes including the circa-1914 clubhouse, multiple radiating three- and four-story hotel room wings, and several mid- to late-twentieth-century additions. The sprawling Colonial Revival style clubhouse includes dining facilities and an indoor swimming pool which dates to its original construction. It has an irregular plan organized around a central two-story I-shaped volume with dormered, hipped roofs. The exterior is clad in stucco and the roof appears to be imitation slate, with numerous segmental-arch dormers. A simple cornice features dentil molding. The symmetrically arranged, paired windows of the first and second stories generally have applied shutters. To the south, a large circular single-story pavilion has a conical roof atop pilasters defining window bays of three 12-light windows each. A single-story extension to the east and north has similar window treatments. Further east is a large, covered entry porch and porte-cochere supported by Doric columns in singles and pairs. To the north, a series of early three-story hotel room wings generally match the clubhouse, with a hipped roof, small, hipped dormers, stucco cladding, and paired windows with applied shutters. To the west, a group of circa-1990 four-story hotel room wings have hipped roofs clad in asphalt shingle with overhanging eaves and large tripartite windows. This group of wings surrounds an outdoor in-ground swimming pool.

Interior Description: N/A

Setting: The Seaview Golf Club is located approximately 6 miles northwest of the Atlantic Ocean and borders Reeds Bay with views of the bay from the Bay Course. Ocean views are an important component of the setting reflected in the course design and layout. Galloway Township is in eastern Atlantic County and is bordered on the northeast by the Mullica River. The township consists of several unincorporated communities, including Absecon Highlands, Cologne, Conoverstown, Germania, Higbeetown, Leeds Point, Oceanville, Pinehurst, Pomona, Smithville, South Egg Harbor, and the "Township Center." Historic aerial imagery shows the slow growth of the township through the mid-twentieth century, including the construction of the NAS 1940s, the construction of the Garden State Parkway in the 1950s, the construction of Stockton University in the 1970s, and the expansion of suburbs throughout the township in the mid- and late-twentieth century. Today, Galloway Township remains primarily agricultural land, with small centers of commerce in the communities and additional undeveloped natural areas used for recreation (Galloway Township, 2009; NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The Seaview Golf Club was built at the direction of businessman Clarence Geist as an exclusive golf club on a former farm near Atlantic City, NJ. Geist commissioned Hugh Wilson to design the 18-hole Bay Course in 1914. A second course, designed by William Flynn in 1929, added an additional 18 holes to the club. The club was a popular locale for elite golfers and socialites from the 1920s through the 1940s. The PGA Championship was held at the club in 1942 (Foster, 2014).

The first permanent Euro-American settlement in the township was Leeds Point, settled in 1678. Galloway Township was formed in 1774 from Egg Harbor Township. In the second half of the eighteenth century, development centered around small communities such as Smithville, Leeds Point, Oceanville, Higbeeville, Cologne, Pomona, Germania, and Conoverstown. In 1821, a road was built through the present-day township connecting Camden to Absecon along present-day Route 30. In 1854, the Camden and Atlantic Railroad was built connecting Atlantic City to Camden through Galloway Township. Communities such as Germania, Cologne, Pomona, and Oceanville grew up and expanded around the railroad stations that were established over the next decades. For much of the nineteenth century, Absecon was the commercial center of the township until it was incorporated as its own city in 1872. In addition to Absecon, several other cities were formed from the township in the late-nineteenth and early-twentieth century. Through the twentieth century, the township remained relatively rural and agricultural. The mid- and late-twentieth saw the improvement of road infrastructure through the township and the growth of suburban developments in parts of the township. Naval Air Station (NAS) Atlantic City was built partially in the southern part of the township in 1942. The NAS was decommissioned in 1958 and now operates as a commercial airport, Air National Guard Base, and Coast Guard Air Station (Galloway Township Historical Society, 2023; Snyder, 2004; Rand McNally, 1897; US Army Corps, 2023).

Significance: Based on the available information, the Seaview Golf Club appears to meet Criterion C in the areas of Architecture and Landscape Architecture as an example of an early 20th-century golf club designed during the heyday of American golf resort design and construction.

Photograph:

Description: Abbot's Modern Cabins are a group of one-story, small, end-gabled cabins arranged in a V-shaped configuration. The cabins have clapboard siding, exposed rafter tails, small side windows, and rear additions possibly for plumbing. The doors are sheltered by wall-mounted gables trimmed with a simple decorative element to match the main roof. A 1930 aerial photograph shows a similar group of cabins across the street. The resource is characteristic of early motor camps. The property includes a Minimal Traditional residence that may have been occupied by the camp owner.

Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Wood, Shingles</u>		

Exterior Description: The Stevens House is a two-and-one-half-story frame Dutch Colonial Revival house constructed in 1925. The house has a gambrel roof with three gabled dormers. Brick chimney stacks are located on either end of the roof on the rear slop. The windows are flat-arch 1/1 sash and regularly spaced with five bays on the façade and three bays on the side elevations. A one-story porch at the façade has a grade-level deck, a flat roof with lattice balustrade, and wraps around the side elevations. The building is clad in wood shingle siding.

Interior Description: N/A

Setting: The Stevens House is located on the west side of Ocean Avenue between Magee Avenue and Brown Avenue. The house is oriented with views directly to the Lavallette Boardwalk, Lavallette Beach, and the Atlantic Ocean. The views to the ocean are partially obstructed by sand dunes; however, the house was designed to have views of the ocean. Historic aerial imagery shows that in 1920, only the northern part of Lavallette was developed, except for some roads in the southern part of the borough. Development of the southern part of the borough appears slow through 1940, but the area is completely built out by 1956 (NETR, 2023).

Survey Name:	<u>Atlantic Shores Offshore Wind – Wind Turbine Area - Aboveground Historic Properties Survey</u>	Date:	<u>February 24, 2023</u>

ELIGIBILITY WORKSHEET

Historic Sites #:

History: According to a previous survey form prepared for a county-wide survey of Ocean County, the Stevens House is believed to have been designed by an architect, although no information was recovered as to who the architect or designer may have been. The house stands prominently on Ocean Avenue with large lot setbacks when compared to the surrounding non-historic dwellings on the street (Kralik, 1981).

Lavallette is a borough in Ocean County, located on the Barnegat Peninsula to the north of Seaside Heights and to the south of Mantoloking. The area was known as Squan Beach until the Barnegat Light Improvement Company developed plans for Lavallette in 1878. The community was named for U.S. Navy Admiral Elie LaVallette who won a decisive battle on Lake Champlain during the War of 1812. Lots in Lavallette were marketed mainly to sportsmen in New Jersey, New York, and Philadelphia. In 1881, Lavallette became directly accessible from the mainland via the Philadelphia and Long Branch Railroad, attracting more visitors and residents, but development remained relatively slow over the next decades. Most residents were railroad employees, and most summer visitors were sportsmen. Despite their limited number, residents voted to incorporate Lavallette as a borough in 1887. Although the town attracted summer visitors, commercial fishing, boatbuilding, and beer and soda bottling remained the main industries through the early twentieth century. In 1911, a road was constructed along present-day Route 35 to Seaside Park, and in 1915 the Tom's River Bridge opened Lavalette to automobile traffic from the mainland via Seaside Heights. The boardwalk was constructed in the 1920s (Borough of Lavallette, 2023; Heritage Studies 1981). Today, Lavallette continues to be a popular summer destination.

Significance: Based on exterior analysis only, the resource appears to meet Criterion C as an example of a Dutch Colonial Revival-style dwelling.

Exterior Finish Materials Wood, Plank

Exterior Description: The Margate Fishing Pier is an approximately 733-foot wood pier set on round timber piles driven into the beach and shore. The piles support a simple deck with an unadorned railing. There are two "tees" approximately 60 feet in length in the center of the pier (constructed in 1989) and at its end in the Atlantic Ocean (constructed in 2013). Two frame front gable sheds covered in standing seam metal are located along the pier. Additionally, benches are located along the length of the pier.

Interior Description: N/A

Setting: The Margate Fishing Pier extends approximately 733 feet into the Atlantic Ocean from Margate Beach. The pier was constructed exclusively for the purpose of fishing by the Anglers Club of Absecon Island and as a result, the pier has full and unobstructed views of the ocean.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The Margate Fishing Pier was originally built in 1923 by the Anglers Club of Absecon Island, a member-only fishing club. A section of the pier and the adjacent boardwalk was destroyed by a hurricane in 1944. The pier was repaired but another major storm in the 1960s again caused damage. A fire in 1989 destroyed the far end of the pier and a large section was destroyed. A lack of funding prevented the club from rebuilding the pier to its original distance and instead, an outer “tee” was constructed where the fire was eventually extinguished. Super Storm Sandy in 2013 damaged the pilings supporting the inner tee which was left askew at a severe angle. As a result of the devastation caused by the storm, the New Jersey Department of Environmental Protection (NJDEP) implemented a dune and beach reclamation initiative. The NJDEP agreed to fully fund a 125-foot extension; however, the reclamation plan also included a replenishing of the beach every three to five years which would result in a loss of the water levels needed for experienced anglers to enjoy the pier. The Anglers Club of Absecon called on their members and used donations and money from the operating fund to extend the pier another 175 feet to ensure adequate sea levels for fishing (Angler’s Club, 2022).

Margate City is in the southeastern extent of Atlantic County on Absecon Island between Ventnor City and Longport. The area that constitutes Margate City was first incorporated as South Atlantic City in 1869. The trajectory of the community was influenced heavily by entrepreneur James L. Lafferty who in 1881 set out to market his share of parcels in the city in an unusual way with the construction of a hotel and restaurant in the shape of an elephant that he named Lucy. Lafferty’s marketing efforts proved to be a success and in addition to the sale of his lots in the city, the Camden and Atlantic Railroad was constructed through the area in 1884. Margate City was incorporated in 1884 and at the time included portions of modern-day Longport, Ventnor City, and southern Atlantic City. Margate City was so successful that in 1929 the mayor of Atlantic City offered to annex Margate, but Margate City refused. Today, Margate City is known as the location of the iconic Lucy the Elephant and is a popular destination south of Atlantic City (History of Margate City, NJ, 2022).

Significance: The pier retains sufficient integrity to convey its significance under NRHP Criterion A for its association with the Maritime History of Margate and Absecon Island.

Eligibility for New Jersey

and National Registers:

☒ Yes

☐ No

National

Register Criteria:

☒ A

☐ B

☐ C

☐ D

Level of Significance

☒ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Repair and replacement of historic materials is an inherent characteristic of wood piers and the Ventnor City Pier retains its integrity of design, location, association, and feeling despite the loss of historic fabric.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: With the opening of the Garden State Parkway, new accommodations for highway travelers changed some of the architectural character of Jersey Shore vacation spots. As the Motels of the Wildwoods Multiple Property Documentation Form (64500880) notes:

The architects and builders in The Wildwoods worked to bring the high-style architecture of Florida down to an "everyman's" level. ... Many of the most fantastical motels are constructed of simple concrete block walls and then use wood framing to create the modern appendages such as butterfly roofs, angled walls and porte-cocheres that match the stylistic designs conjured by the exotic names of the motels (Zerbe, et al, 2004).

North Wildwood City is in Cape May County north of Wildwood City on the Atlantic coast barrier island known as Five Mile Beach. The area was used as a fishing, herding, and whale processing locale during the seventeenth and eighteenth centuries and did not have any permanent settlement until the village of Anglesea was established by Swedish fishermen around 1870. The hazardous conditions at the Hereford Inlet at the north end of the island prompted the construction of the Hereford Lighthouse, completed in 1874. A rail line was established between Cape May Courthouse and Anglesea in 1884, which, along with the Rio Grand bridge, made the island more accessible from the mainland. Shortly after, in 1885, Anglesea was designated a borough. The community was renamed North Wildwood in 1906 to capitalize on the tourist trade that was booming in their neighbor to the south. Within eleven years the municipality grew large enough to be designated as a city. The area's economic base is commercial with an emphasis on tourism, including hotels and boardwalk attractions (History of North Wildwood, NJ, 2022).

Significance: Based on exterior analysis only, the resource appears to meet Criterion C as an example of a Doo Wop or Populuxe motel as defined by the Motels of the Wildwoods MPDF.

Description: The Hereford Lighthouse was designed by Paul Pelz and completed in 1874. His use of the Stick Style is unique on the East Coast, though he designed five similar lighthouses on the West Coast. The structure was residential, with living quarters for the keeper and the tower itself, which is 57 ft tall. The lighthouse was moved 150 ft to its current location after a 1913 storm damaged its foundation. The lighthouse continued to function until 1964 when an automated light nearby rendered it obsolete. In the 1980s, an automated light was installed in the tower to bring it into service again.

Exterior Finish Materials	Wood, Shingles		

Exterior Description: The building at 5231-5229 Central Avenue is a two-story Folk Victorian with a side-gable roof and central gabled dormer. It is a simple frame dwelling with four bays on the first-story façade and two bays on the second-story façade. There is a one-story hipped-roof porch that wraps around to the side elevations. Restrained “gingerbread” decoration is featured on the porch and dormer. Windows are simple flat arch and regularly spaced with 1/1 sash. The exterior wall cladding is wood clapboard on the first story and wood shingles on the second story.

Interior Description: N/A

Setting: The house is located on the southeast side of Ocean Avenue within a dense residential block. The simple porches, strong bilateral symmetry and massing of the house are characteristic of duplex beachfront historic homes of this era. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The resource first appears on a 1920 aerial photograph of Ocean City and was situated along a linear row of dwellings fronting Central Avenue with views to the Atlantic Ocean from the rear of the dwelling. The corridor of Central Avenue was the only visibly improved road along this area of Ocean City and homes were confined to its southeast and northwest sides. By the early 1950s, steadily development is visible in aerial photographs along the orderly grid of avenues and numerical streets. By the late 1970s, the once rural and sparsely developed area of Ocean City was a densely built area of residences lining the blocks to the northwest of the ocean. This configuration is maintained today (NETR, 2022).

Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: Based on exterior analysis only, the resource appears to meet Criterion C as an example of a vernacular Late Victorian dwelling.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The resource first appears on a 1931 aerial photograph of Pleasantville City; however stylistic evidence suggests the Folk Victorian dwelling was constructed ca. 1900. The dwelling was set within a large lot surrounded by cultivated fields bordered by areas of tree cover on the southwest side of West Leeds Avenue. The surrounding area was predominantly rural and undeveloped. By the 1950s, a large postwar housing development was constructed to the southeast of the dwelling on the northwest and southeast sides of North New Road. Development continued into the latter half of the twentieth century with a proliferation of new construction occurring in the late 1980s and early-to-mid 1990s which dramatically changed the character of the historical rural landscape (NETR, 2022).

Pleasantville City is located in Atlantic County along the banks of Lakes Bay on the mainland west of Atlantic City. European settlement began in the 1700s as small fishing communities along Lakes Bay and Great Egg Harbor River. These small communities continued to grow and eventually coalesced into a unified community in the late-1800s. This was mostly spurred by the areas located as a gateway into Atlantic City, as well as the migration of whalers and shell-fishers entering the area from the Cape May region. During this time railroads and stagecoach lines brought passengers through Pleasantville on their way to Atlantic City. The areas of Risleyville, Pleasantville, Mt. Pleasant, and Smith's Landing were consolidated and incorporated into the Borough of Pleasantville on December 18, 1888. Pleasantville continued to prosper and grow and a regional trolley service was instituted in 1903. As transportation routes continued to grow, linking Absecon to Somers Point, and the inland areas of New Jersey to Atlantic City, Pleasantville's central location caused more economic growth and the area soon boasted numerous commercial businesses and markets. This growth continued into the 1920s, and the city saw a population increase from 5,887 to over 12,000 as Pleasantville become a commercial hub on the mainland. However, the construction of the Garden State Parkway and the Atlantic City Parkway after World War II, which provided opportunities for residents to move to more distant suburban areas and larger shopping plazas, and also lessened the impact of the importance of railroad transportation, Pleasantville's role as a commercial, economic, social, and transportation hub declined (Remington, Vernick & Walberg Engineers 2008).

Significance: Based on exterior analysis only, the resource appears to meet Criterion C as an example of a vernacular Late Victorian dwelling.

Exterior Description: The Wesley Methodist Episcopal Church is a 1903 brick church with Romanesque and Classical Revival elements consisting of a single story atop a raised basement. The building has a modified cruciform plan with gable roofs surmounted by a squat, windowless central tower with wood clapboard siding and a convex-hipped roof. This roof and the gable roofs of the nave and transept are sheathed in asphalt shingle. On the primary (south) elevation, the ell's formed by the nave and transepts are filled with flat-roofed single-story volumes. At the western of these two volumes, the primary entrance is via a pair of doorways with arched stained-glass transoms, accessed via a wide flight of concrete steps wrapping around the building's corner. The nave and transepts feature plain corner piers and a painted stone or cast-stone string-course above the raised basement. Basement windows consist of vinyl double-hung and sliding units. The main floor of the building has arched stained glass windows on every elevation, including a flat-roofed rear wing which includes two secondary entrances. A single-bay-wide gable-roofed extension to the east is clad in stucco.

Interior Description: N/A

Setting: The church is located inland in Pleasantville in Ocean County, approximately 5.60 miles to the northwest of the ocean and does not have a maritime setting.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The Wesley Methodist Episcopal Church in Pleasantville was organized in the spring of 1903 after local parishioners realized a need for a Methodist denominational church centrally located in the town. With support from Dr. J. Morgan Reed, a pastor from the St. Paul's Church in nearby Atlantic City, the name Wesley Methodist Episcopal Church was chosen to commemorate the birth of John Wesley, the founder of the Methodist movement. A committee was formed to find an appropriate site for the new church and for a sum of \$17,000 the current building was constructed in the northeastern quadrant of the intersection of Linden Avenue and Pleasant Avenue. Local Atlantic City architect J. Harvey Shumway donated his services to the design of the church. Other local community members donated services for the construction of the church, including Charles A. Adams, construction superintendent; the John E. Blake Lumber Company, who provided lumber at cost; Elias Campbell, who helped with the general construction of the building, and J. Alvin McAnney, who provided the brick for the church at cost. Other parishioners donated money and volunteered throughout the construction (Historical Society of Pennsylvania, 1986). Today, the church is occupied by a Seventh-Day Adventist congregation.

Pleasantville City is located in Atlantic County along the banks of Lakes Bay on the mainland west of Atlantic City. European settlement began in the 1700s as small fishing communities along Lakes Bay and Great Egg Harbor River. These small communities continued to grow and eventually coalesced into a unified community in the late-1800s. This was mostly spurred by the areas located as a gateway into Atlantic City, as well as the migration of whalers and shell-fishers entering the area from the Cape May region. During this time railroads and stagecoach lines brought passengers through Pleasantville on their way to Atlantic City. The areas of Risleyville, Pleasantville, Mt. Pleasant, and Smith's Landing were consolidated and incorporated into the Borough of Pleasantville on December 18, 1888. Pleasantville continued to prosper and grow and a regional trolley service was instituted in 1903. As transportation routes continued to grow, linking Absecon to Somers Point, and the inland areas of New Jersey to Atlantic City, Pleasantville's central location caused more economic growth and the area soon boasted numerous commercial businesses and markets. This growth continued into the 1920s, and the city saw a population increase from 5,887 to over 12,000 as Pleasantville become a commercial hub on the mainland. However, the construction of the Garden State Parkway and the Atlantic City Parkway after World War II, which provided opportunities for residents to move to more distant suburban areas and larger shopping plazas, and also lessened the impact of the importance of railroad transportation, Pleasantville's role as a commercial, economic, social, and transportation hub declined (Remington, Vernick & Walberg Engineers 2008).

Significance: Based on exterior analysis only, the resource appears to meet Criterion C as an example of the Romanesque Revival style in ecclesiastical architecture.

Photograph:

Description: The Chestnut Neck Boat Yard was determined to be eligible for listing in the NRHP by NJHPO in 2004. It is an approximately 1.4-acre boat yard complex begun as early as the 1930s and eventually growing to include an array of services geared towards recreational boaters, including boat lifting, docking, storage, repair, and fueling; marine supply, bait, and tackle sales; boat sales and rentals; and a snack bar/cafe. The property includes three early-twentieth-century wood frame buildings, docks, a boat ramp, and a ca. 2015 building.

Description: The Somers Mansion is the 2.5 story brick home of Richard Somers, the first member of the family for whom Somers Point is named to be born in New Jersey. Its brick walls are laid in Flemish Bond and it has a gambrel roof and is ringed by the stumps of timbers that supported a balcony that was added sometime after. It was in use by 1726 and is considered the oldest building in Atlantic County.

Exterior Description: The New York Avenue School is a brick Classical Revival school building consisting of two stories atop a raised basement. The building has a T-shaped plan with a flat roof, low parapets, decorative brick corner panels and spandrels, and a brick water table. The primary elevation is arranged symmetrically, with a central entrance with a transom and fanlight set within an arched opening below a shallow bracketed and modillioned portico. Fenestration consists of replacement sash of varying sizes in singles, pairs, and gangs of four. A low concrete wall partially encloses the site. Also on the site is a small family cemetery plot containing a single burial marker enclosed with a low masonry wall and a wrought-iron gate.

Interior Description: N/A

Setting: The New York Avenue School is surrounded by residential and commercial development in the Shore Road corridor to the west of Ship Channel. As a result, the resource does not have a maritime setting.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The New York Avenue School was constructed in 1914 to serve Somers Point in Atlantic County. An addition was added to the school in 1922 and the building underwent a restoration in 2005. Today, the building houses full-day preschool classes, the Central Office, Business Office, and Child Study Team Offices (Somers Point School District, 2022).

Somers Point is located in Atlantic County, southwest of Atlantic City on Great Egg Harbor Bay. It is the oldest settlement in Atlantic County and was founded in 1693 when the Somers family established their plantation. Originally known as Somerset Plantation, Somers Point became a borough in 1866. Its location on Great Egg Harbor Bay led to it becoming a popular port of call, and its close location to the resort areas of Ocean City and Atlantic City prompted rapid residential and commercial development in the region (Somers Point New Jersey, 2022).

Significance: Based on exterior analysis only, the resource appears to meet Criterion A for its association with Education in Somers Point and Atlantic County.

BUILDING ATTACHMENT

Historic Sites #:

Common Name: 25 North Bayview Drive

Historic Name: N/A

Present Use: Residential, Permanent

Historic Use: Residential, Permanent

Construction Date: 1919 **Source:** Stylistic Evidence; NETR, 2022.

Alteration Date(s): N/A **Source:** N/A

Designer: N/A **Physical Condition:** Excellent

Builder: N/A **Remaining Historic Fabric:** High

Style: Craftsman

Form: Bungalow **Stories:** 1.5

Type: N/A **Bays:** N/A

Roof Finish Materials: Asphalt Shingles

Exterior Finish Materials Wood, Shingles

Exterior Description: The building at 25 North Bayview Drive is a one-and-one-half-story Craftsman bungalow. The house has a broad cross-gable roof with open brackets in the eaves. The exterior wall cladding is wood shingle. There is an off-center gabled front porch with open brackets and exposed rafter tails. Rusticated CMU porch piers with square columns support a wooden flat arch. The fenestration appears original with a variety of fixed and 1/1 wood sash. Most notably, there is a wide fixed sash window on the façade, adjacent to the porch, that features a multilight transom. Presumably, the primary entrance is within the porch, but porch screens obscure the interior.

Interior Description: N/A

Setting: The building at 25 North Bayview Drive is a waterfront home near Whale Beach and is oriented to face Strathmere Bay. The township consists of several unincorporated communities, including Beesleys Point, Marmora, Palermo, Seaville, Greenfield, Petersburg, Tuckahoe, Marshallville, Steelmantown, and Strathmere. Most of the township is on the mainland, except for Strathmere, which is located on the barrier island of Ludlam Island. Upper Township remains predominantly comprised of small communities with a lot of undeveloped land, including the Tuckahoe Wildlife Management Area in the northeast part of the township.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The residence at 25 North Bayview Drive first appears in a 1920 aerial photograph of Strathmere suggesting a construction date of ca. 1919. The photograph also reveals that the neighborhood contained few additional dwellings, indicating development at this time was ongoing. Development in the neighborhood was slow, evidenced by subsequent aerial photographs from the 1950s through the 1980s. However, by the mid-1990s this area of Strathmere contained dense residential development (NETRonline, 2022).

Upper Township is the northernmost township in Cape May County. One of the original New Jersey townships, Upper Township was incorporated in 1798. For much of the nineteenth century, it was predominantly a fishing, oystering, and farming community and overall had limited development. By the late-nineteenth century, the West Jersey Railroad connected the villages of Tuckahoe, Petersburg, and Seaville. As seaside resorts on the neighboring barrier islands became more popular in the early twentieth century, some villages in Upper Township became popular stops for automobile traffic along the way. General stores and gas stations flourished in villages like Beesley's Point, Marmora, and Palermo. In 1926, a bridge was built connecting Tuckahoe to Corbin City across the Tuckahoe River, and in 1928 the Beesley's Point Bridge was built across Great Egg Harbor. These bridges made Upper Township more accessible from the north and stimulated growth as developers bought more land and built homes and businesses. The construction of the Garden State Parkway through the eastern part of Upper Township in 1954 allowed summer tourists to bypass the communities in the township on their way to the seaside resorts, reducing business in the gas stations and general stores throughout the township (Holden, 2020; Rand McNally, 1897; Upper Township, 2023).

Significance: Based on exterior analysis only, the residence at 25 North Bayview Drive appears to meet Criterion C in the area of Architecture as an example of a bungalow in the Craftsman style.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The resource, noted as being constructed in 1880 by county records, is situated off a long private dirt drive and is not visible from the public right-of-way. Topographic maps from 1890 to 1925 show a road extending straight off present-day Garden State Parkway to the vicinity of the residence, but no residence is mapped. Review of a 1931 aerial photograph reveals the presence of what appears to be a residence in the location of the current resource and cleared fields extending west and north from the residence, and the current road system is present. A 1951 aerial photograph shows the residence, cleared fields, and the road leading to the residence was tree-lined. By 1956, what appear to be two residences and numerous outbuildings are present on the property, and this configuration remains today. By the early 1990s it appears that the cleared fields were no longer being farmed, and reforestation continued throughout the years.

Upper Township is the northernmost township in Cape May County. One of the original New Jersey townships, Upper Township was incorporated in 1798. For much of the nineteenth century, it was predominantly a fishing, oystering, and farming community and overall had limited development. By the late-nineteenth century, the West Jersey Railroad connected the villages of Tuckahoe, Petersburg, and Seaville. As seaside resorts on the neighboring barrier islands became more popular in the early twentieth century, some villages in Upper Township became popular stops for automobile traffic along the way. General stores and gas stations flourished in villages like Beesley's Point, Marmora, and Palermo. In 1926, a bridge was built connecting Tuckahoe to Corbin City across the Tuckahoe River, and in 1928 the Beesley's Point Bridge was built across Great Egg Harbor. These bridges made Upper Township more accessible from the north and stimulated growth as developers bought more land and built homes and businesses. The construction of the Garden State Parkway through the eastern part of Upper Township in 1954 allowed summer tourists to bypass the communities in the township on their way to the seaside resorts, reducing business in the gas stations and general stores throughout the township (Holden, 2020; Rand McNally, 1897; Upper Township, 2023).

Significance: For purposes of this study, this resource is recommended as eligible for the NRHP under Criterion C.

Type:	<u>Other</u>		
Roof Finish Materials:	<u>N/A</u>		
Exterior Finish Materials	<u>Wood, Plank</u>		

Exterior Description: The Ventnor City Fishing Pier is an approximately 1,000-foot-long wooden pier supported by wooden posts. The pier features metal railings, as well as benches, cleaning tables, and modern lighting. A modern pier house is located near the entrance of the pier and is clad in vinyl siding and capped by a hip roof covered in standing seam metal. The roof features shed-roof dormers. The pier underwent extensive renovations in 2017.

Interior Description: N/A

Setting: The Ventnor City Fishing Pier extends approximately 990 feet from the boardwalk into the Atlantic Ocean. As the pier was constructed primarily for fishing, there are full and unobstructed views to the Atlantic Ocean from the pier. Historic aerial imagery shows the southern part of Ventnor City fully developed by 1920, with development north of the Inside Thorofare through the first half of the twentieth century, culminating in the present-day level of development by the 1960s. Today, portions of the northern part of the city remain undeveloped marshland, and the rest of the city mainly consists of private developments and enclaves. Ventnor City remains a popular summer resort (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The Ventnor City Pier was constructed in 1963 and was the fourth pier built at this site. It is the longest fishing pier in New Jersey. The pier underwent extensive renovations in 2017.

Ventnor City is in Atlantic County and is situated on Absecon Island south of Atlantic City and north of Margate. Ventnor City remained undeveloped hills and meadows through most of the nineteenth century, even while Atlantic City and South Atlantic City (present-day Margate) grew and developed in the mid- and late-nineteenth century. In 1881, the Camden and Atlantic Railroad connected Atlantic City to Margate through Ventnor, requiring the grading of many of the hills in the area. In 1888, the Camden and Atlantic Land Company built a train station in Ventnor City, providing direct passenger access to the area for the first time. The land company subsequently built three cottages. The name "Ventnor" was chosen in 1889, referencing the seaside resort in Ventnor, England (Smith, 1963).

By the turn of the twentieth century, the lowland marshes in Ventnor were filled, and Ventnor had several houses, a post office, and a few additional buildings. In 1900, the county built the Longport Speedway, a gravel road connecting Atlantic City to Longport through Ventnor. Ventnor City was officially incorporated in 1903. Following incorporation, the city continued to develop, adding additional houses, bath houses, a newspaper, a boat works, a pharmacy, and a boardwalk over the next decade. The twentieth century saw increased development, solidifying Ventnor City as a popular summer resort (Smith, 1963; Ventnor City, 2022).

Significance: The resource retains sufficient integrity to convey its significance under Criterion A for its association with the Maritime History of Ventnor City.

**Eligibility for New Jersey
and National Registers:**

Description: The Vassar Square Condominiums are sited in a high-rise brick and glass clad 20-story building located directly on the Boardwalk. Construction on the building began in 1968 and originally contained apartments. Following the real estate boom in the region in the 1970s, the building was converted into condominiums, the first high-rise building to make that conversion on the Ventnor Boardwalk. The building is recommended eligible for the NRHP under Criterion C for its architecture. The building exhibits elements of Modern architecture including the cantilevered curved balconies with glass railings, and curved columns.

BUILDING ATTACHMENT

Historic Sites #:

Property Name:	Missouri Avenue Beach						
Street Address:	Street #:	N/A	N/A	Apartment #:	N/A	N/A	
		(Low)	(High)		(Low)	(High)	
Prefix:	N/A	Street Name:	Boardwalk	Suffix:	N/A	Type:	N/A
County(s):	Atlantic			Zip Code:	08401		
Municipality(s):	Atlantic City			Block(s):	1		
Local Place Name(s):	N/A			Lot(s):	83 and 92		
Ownership:	Public			USGS Quad(s)	Atlantic City		

Description: Missouri Avenue Beach is an expanse of beach bounded by the Playground Pier on the east, the Boardwalk on the north, and the Kennedy Plaza to the northwest. The beach is the widest on the east adjacent to the pier and tapers toward its west end. Restoration projects since the 1990s have converted a strip of the sand on the ocean side of the Boardwalk into a dune that is traversed by wood-plank ramps to maintain public access to the beach from the boardwalk. Aside from a non-historic wood frame arch with the name "Missouri Avenue Beach," there are no structures currently associated with the beach.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: From the end of the 1920s to the 1960s, Missouri Avenue Beach was effectively Atlantic City's official Black beach. African Americans were discouraged, to the point of effective exclusion, from enjoying the city's beaches, Boardwalk, hotels, and eating establishments outside of formally designated places, times of day, or times of the year. African American members of the Atlantic City Beach Patrol were assigned exclusively to what locals came to call Chicken Bone Beach. What started as a derogatory name was in time adopted by some as a demonstration of pride for their beach. During this time, the Northside neighborhood grew as a popular black entertainment district known for its music scene at Black-owned nightclubs like Club Harlem. Both Black tourists and celebrities who came for the city's nightlife spent their days at Missouri Avenue Beach (HABS No. NJ-1161; Bear, 2019; PBS, 2019; CBB 2022).

Significance: The resource appears to meet Criterion A in the area of Black Heritage for its association with Atlantic City's African American community in the early to mid-twentieth century and appears to be the only resource with that association along the city's Boardwalk.

Form:	<u>Commercial</u>	Stories:	<u>4</u>
Type:	<u>N/A</u>	Bays:	<u>6</u>
Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Stucco</u>		

Exterior Description: The Athens II Motor Inn is a four-story L-shaped motel with a mansard roof clad in asphalt shingle. The primary elevation faces northeast to East Second Avenue across an outdoor swimming pool at grade. The northeast-facing elevations are characterized by continuous balconies at each upper floor supported on concrete beams and brick-clad columns, which divide the elevations into structural bays. Generally, one motel room occupies each structural bay, with a large window and door leading to the balconies. One bay in the northern volume of the building is occupied by an open-air stair. A non-historic elevator enclosure is located at the inside corner of the "L". At the northeast-facing elevations, the first-story exterior walls are clad in brick while the upper floors have a rough stucco finish. The south- and west-facing elevations have stucco finishes and fewer windows. A prominent rooftop sign reads, "Athens II" and additional signage is applied to the building's northwest elevation.

Interior Description: N/A

Setting: The Athens II Motor Inn occupies a corner lot across East Second Avenue from a public beach at the mouth of Hereford Inlet, in a densely built part of North Wildwood City exhibiting a grid pattern of development. Nearby buildings are primarily mid-twentieth-century motels along with two-story to five-story condominiums of the late twentieth and early twenty-first centuries. The Athens II Motor Inn is surrounded by paved parking and concrete sidewalks.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: North Wildwood City is in Cape May County north of Wildwood City on the Atlantic coast barrier island known as Five Mile Beach. The area was used as a fishing, herding, and whale processing locale during the seventeenth and eighteenth centuries and did not have any permanent settlement until the village of Anglesea was established by Swedish fishermen around 1870. The hazardous conditions at the Hereford Inlet at the north end of the island prompted the construction of the Hereford Lighthouse, completed in 1874. A rail line was established between Cape May Courthouse and Anglesea in 1884, which, along with the Rio Grand bridge, made the island more accessible from the mainland. Shortly after, in 1885, Anglesea was designated a borough. The community was renamed North Wildwood in 1906 to capitalize on the tourist trade that was booming in their neighbor to the south. Within eleven years the municipality grew large enough to be designated as a city. The area's economic base is commercial with an emphasis on tourism, including hotels and boardwalk attractions (History of North Wildwood, NJ, 2022). With the construction of the Garden State Parkway beginning in the late 1940s, new accommodations for highway travelers changed some of the architectural character of Jersey Shore vacation spots. As the *Motels of the Wildwoods* Multiple Property Documentation Form (MPDF; 64500880) notes:

The architects and builders in The Wildwoods worked to bring the high-style architecture of Florida down to an "everyman's" level. ... Many of the most fantastical motels are constructed of simple concrete block walls and then use wood framing to create the modern appendages such as butterfly roofs, angled walls and porte-cocheres that match the stylistic designs conjured by the exotic names of the motels.

Although much of North Wildwood City was densely developed in the early postwar period, the block upon which the Athens II Motor Inn was built remained undeveloped until after 1970. The building's fourth floor and mansard roof were added after 1980.

Significance: Based on exterior analysis only, the Athens II Motor Inn satisfies the registration requirements set forth in the *Motels of the Wildwoods* MPDF and appears to meet Criterion A for its association with tourism in the Wildwoods and Criterion C as an example of a Populuxe motel defined by the MPDF.

**Eligibility for New Jersey
and National Registers:**

☒ Yes

☐ No

National

Register Criteria:

☒ A

☐ B

☒ C

☐ D

Level of Significance

☒ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Although altered with the addition of a fourth floor and mansard roof, the Athens II Motor Inn satisfies the registration requirements set forth in the *Motels of the Wildwoods* MPDF, namely, it was built during the period of significance, was constructed as a motel, has a continuous balcony along the exterior supported by beams, an L-shaped footprint, on-site parking, a distinctive illuminated sign, an extended roof overhang, and is constructed of concrete.

Exterior Description: The Acacia is a four-story, multi-unit concrete residential building and motel with a flat roof and a narrow rectangular plan. Continuous balconies along the ocean-facing northeast and southeast elevation are supported on concrete beams. On the northeast elevation, the exterior walls of the individual units are angled so that each unit's large picture window is tilted towards the ocean. Open-air parking is located beneath the upper floors along most of the building's length. A pair of porte-cocheres topped by roof decks are located at each end of the building. An in-ground outdoor swimming pool is adjacent to the southeast end. The building also features distinctive signage mounted to the northwest and northeast elevations.

Interior Description: N/A

Setting: The Acacia is located in a residential neighborhood with sidewalks located along the shore. Nearby buildings are primarily mid-twentieth-century motels along with two-story to five-story condominiums of the late twentieth and early twenty-first centuries.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: North Wildwood City is in Cape May County north of Wildwood City on the Atlantic coast barrier island known as Five Mile Beach. The area was used as a fishing, herding, and whale processing locale during the seventeenth and eighteenth centuries and did not have any permanent settlement until the village of Anglesea was established by Swedish fishermen around 1870. The hazardous conditions at the Hereford Inlet at the north end of the island prompted the construction of the Hereford Lighthouse, completed in 1874. A rail line was established between Cape May Courthouse and Anglesea in 1884, which, along with the Rio Grand bridge, made the island more accessible from the mainland. Shortly after, in 1885, Anglesea was designated a borough. The community was renamed North Wildwood in 1906 to capitalize on the tourist trade that was booming in their neighbor to the south. Within eleven years the municipality grew large enough to be designated as a city. The area's economic base is commercial with an emphasis on tourism, including hotels and boardwalk attractions (History of North Wildwood, NJ, 2022). With the construction of the Garden State Parkway beginning in the late 1940s, new accommodations for highway travelers changed some of the architectural character of Jersey Shore vacation spots. As the *Motels of the Wildwoods* Multiple Property Documentation Form (MPDF; 64500880) notes:

The architects and builders in The Wildwoods worked to bring the high-style architecture of Florida down to an "everyman's" level. ... Many of the most fantastical motels are constructed of simple concrete block walls and then use wood framing to create the modern appendages such as butterfly roofs, angled walls and porte-cocheres that match the stylistic designs conjured by the exotic names of the motels.

Although much of North Wildwood City was densely developed in the early postwar period, the block upon which the Athens II Motor Inn was built remained undeveloped until after 1970. The building's fourth floor and mansard roof were added after 1980.

Significance: Based on exterior analysis only, the Acacia satisfies the registration requirements set forth in the *Motels of the Wildwoods* MPDF and appears to meet Criterion A for its association with tourism in the Wildwoods and Criterion C as an example of a Populuxe motel defined by the MPDF.

Description: Atlantic City Armory, located at 1008 Absecon Boulevard is a large, two-story, 11-bay, brick building. The primary façade features a stepped parapet above the primary entrance, which is inset with three narrow windows. The primary façade is flanked on both sides by four additional bays which each feature three narrow, vertical windows midway up the façade. The entire primary façade is flanked with two taller, attached structures which feature asymmetrical parapets, and secondary entrances. The southerly façade features two rows of 18 symmetrical, single 1/1 windows. This window pattern continues around the southeasterly side.

Description: The building at 419 Carson Avenue is a two-story hipped-roof dwelling with wood shingle siding and a one-story shed-roof porch. There is a hipped-roof dormer on the street-facing elevation. The dormer and roof feature exposed rafter tails. The residence is two bays wide and four bays deep with 1/1 sash fenestration. The entrance is in the right bay within the porch. The left bay has a tripartite window with a fixed center sash flanked by 1/1 sash. The porch is simply framed with square posts and a wood deck raised on pilings, without skirting, and a homemade balustrade. The foundation of the house is rusticated CMU.

Form:	<u>Other</u>	Stories:	<u>7</u>
Type:	<u>N/A</u>	Bays:	<u>9</u>
Roof Finish Materials:	<u>Unknown</u>		
Exterior Finish Materials	<u>Brick, Stone</u>		

Exterior Description: The Bartlett Building is a rectangular, seven-story, Beaux Arts style commercial building. The building is seven bays wide and nine bays long. The cladding is brick and stone veneer. The building features a two-story rusticated base with an entablature, as well as a full cornice on the sixth floor. The building has been altered, notably the removal of the original fenestration and corner tower, which was removed when the attic story was added in 1927 (Atlantic City Experience, 2023).

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023). The Bartlett Building is situated about three blocks from the Atlantic Ocean in a commercial district along Atlantic Avenue.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022). The Bartlett Building was built in 1903 as an office building and originally included a tower at the southwest corner which was removed when the seventh floor was added in 1927 (Atlantic City Experience, 2023).

Significance: Based on exterior analysis only, the Bartlett Building appears to meet Criterion C in the area of Architecture as an example of a Beaux Arts style commercial building.

Exterior Description: The building at 734 North Indiana Avenue is a two-story, two-bay-by-five-bay brick Renaissance Revival-style fire station with a three-story square tower flanked by single-story volumes on the southeast elevation. The hipped roof of the main volume is clad in asphalt shingle while the tower and single-story volumes have flat roofs. The exterior brick features horizontal stringcourses which are more widely spaced at the first floor and more narrowly spaced at the second floor. The primary (southwest) elevation facing North Indiana Avenue has a pair of overhead garage doors at the first floor and paired windows with wrought-iron balcony railings at the second floor. Windows are generally one-over-one or single-light vinyl replacement sash with stone sills and brick headers. The belfry level of the tower features louvered arched openings surmounted by a modillioned sheet copper cornice.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Atlantic City suffered devastating fires in 1898 and 1902. The volunteer Atlantic City Fire Department was founded in 1874 and became a paid department in 1904. The building at 734 North Indiana Avenue, then known as Engine Company 9, was built in 1909 in a residential area that developed between about 1900 and 1950 (NETR, 2023). The station shared several design elements with the 1903 Station 3 located at Maryland and Arctic Avenues (Atlantic City Weekly, 2018). The station was renamed as Atlantic City Station 3 in the late twentieth or early twenty-first century.

Significance: Fire Station #9 has been determined eligible for listing in the NRHP by the NJHPO. It appears to meet National Register Criteria A and C in the areas of Community Planning and Development and Architecture for its association with the development of firefighting in Atlantic City and as an example of a Renaissance Revival-style firehouse of the early twentieth century.

Exterior Finish Materials	<u>Wood, Shingles</u>		

Exterior Description: The building at 1015 South Ocean Avenue is a one-and-one-half-story single-family home with a gambrel roof, wood shingle siding, and a recessed porch. There is a pair of gabled dormers on the forward slope of the roof with paired 1/1 replacement sash. The first-story façade is four bays with the entrance in the second bay from the left. The porch has square columns and a partially shingled foundation with small windows. The side elevations are four bays with the bay closest to the rear elevation slightly dropped so that there is a break in the roofline.

Interior Description: N/A

Setting: The resource is an oceanfront property surrounded by like buildings with direct beach access. Historic aerial imagery shows that the current street layout in Seaside Park was almost entirely in place by 1920 except for the southwestern portion of the borough, and the entire borough was completely built out by 1972.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Seaside Park Borough is in Ocean County south of Seaside Heights and north of Island Beach State Park on the Barnegat Peninsula barrier island. Early Euro-American whalers built temporary camps on the barrier island in the mid-to-late-seventeenth century, but the area remained largely uninhabited until the latter half of the nineteenth century. The first permanent Euro-American settlement began in 1874 and was referred to as Park City. In 1875, the area became known as Seaside Park and witnessed development as lots were sold, houses were constructed, and roads were built. Hotels such as the Berkeley Arms and the Hiawatha were built in the late 1870s to attract vacationers and sportsmen. In 1881, the Pennsylvania Railroad established a line to Seaside Park from the mainland, stimulating additional growth in the community. In 1898 Seaside Park was incorporated as its own borough. The area soon boasted grand hotels, a yacht club, a casino, and a boardwalk and attracted visitors from Philadelphia and New York City. In 1911, a road was built along the Barnegat Peninsula from Bay Head to Seaside Park, and in 1915 the Tom's River Bridge was constructed, connecting Seaside Park to the mainland via Seaside Heights. Along with increasing tourism to Seaside Heights, the road and bridge also stimulated the fishing industry. The area witnessed the decline of the grand resorts in the mid- and late-twentieth century, replaced by more affordable hotels (Borough of Seaside Park, 2022; Heritage Studies, Inc., 1981). Today, Seaside Park continues to be a popular summer destination.

Significance: 1015 South Ocean Avenue is associated with mid-twentieth-century development in Seaside Park. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 1015 South Ocean Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 1015 South Ocean Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 905 – 907 South Ocean Avenue is a two-story elevated single-family home with wood shingle siding, a porch, and prominent hipped-roof dormers. The façade is three bays wide and the side elevations are four bays deep. The right bay of the first story is a carport while the center bay has paired 1/1 replacement sash. The left bay is a large staircase that leads to the hipped-roof porch above. The porch has square-paneled columns and shingled corner supports. The center bay of the second-story façade is a large plate-glass window. To the left of the window is the primary entrance. To the right of the window, the bay is recessed with a pair of 1/1 replacement sash and an additional 1/1 sash on the side of the center bay. The roof of the porch has deeply overhanging eaves that merge into a skirt roof on the side elevations before becoming part of the rear hipped roofline. The top of the porch is flat and sunken to form a balcony that wraps around the dormer on the façade. The dormer is like a bay window with tripartite 1/1 sash on the forward elevation and single 1/1 on the side elevations. The dormer is flanked on either side by sliding patio doors. The side elevations have complex massing with paneled oriel windows, shed roof overhangs, balconies, and both paired and single 1/1 sash fenestration.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The residence at 905-907 South Ocean Avenue appears to have originally been constructed as a two-story foursquare with a hipped-roof front porch. According to Bing (2012) and Google (2013) streetviews, the building underwent a radical rehabilitation and bears little resemblance to the original design.

Seaside Park Borough is in Ocean County south of Seaside Heights and north of Island Beach State Park on the Barnegat Peninsula barrier island. Early Euro-American whalers built temporary camps on the barrier island in the mid-to-late-seventeenth century, but the area remained largely uninhabited until the latter half of the nineteenth century. The first permanent Euro-American settlement began in 1874 and was referred to as Park City. In 1875, the area became known as Seaside Park and witnessed development as lots were sold, houses were constructed, and roads were built. Hotels such as the Berkeley Arms and the Hiawatha were built in the late 1870s to attract vacationers and sportsmen. In 1881, the Pennsylvania Railroad established a line to Seaside Park from the mainland, stimulating additional growth in the community. In 1898 Seaside Park was incorporated as its own borough. The area soon boasted grand hotels, a yacht club, a casino, and a boardwalk and attracted visitors from Philadelphia and New York City. In 1911, a road was built along the Barnegat Peninsula from Bay Head to Seaside Park, and in 1915 the Tom's River Bridge was constructed, connecting Seaside Park to the mainland via Seaside Heights. Along with increasing tourism to Seaside Heights, the road and bridge also stimulated the fishing industry. The area witnessed the decline of the grand resorts in the mid- and late-twentieth century, replaced by more affordable hotels (Borough of Seaside Park, 2022; Heritage Studies, Inc., 1981). Today, Seaside Park continues to be a popular summer destination.

Significance: 905 – 907 South Ocean Avenue is associated with early-twentieth-century development in Seaside Park. The building is not representative of a significant architectural style or type and is not architecturally significant.

Form:	Apartment	Stories:	4
Type:	N/A	Bays:	6
Roof Finish Materials:	Unknown		
Exterior Finish Materials	Brick		

Exterior Description: The building at 143 -149 South St. James Place is a four-story early twentieth-century brick apartment building. The façade is clad in buff brick with a series of six projecting window bays that extend all four stories and terminate in a hipped standing seam metal roof at the building roofline. Based on a historic photograph from 1921, there was once a porch roof at this juncture but now there is a stuccoed frieze band with a metal cap fitted over the coping. A four-tier porch, supported by large brick piers, extends the entirety of the façade but is an open balcony at the highest level. There are separate entries along the façade to different sections of the building, probably for dedicated stairwells leading to the units above. The fenestration is flat-arch with 1/1 double-hung sash and aluminum storms. The entries are half-glazed with a transom above. The other elevations are in a simple brown brick with regular flat-arch and segmented-arch fenestration but are otherwise devoid of features or decoration.

Interior Description: N/A

Setting: Residential/commercial area, surrounded by hotels, restaurants, and other residential properties. One block away from beach/boardwalk access. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Constructed circa 1920, the building at 143 -149 South St. James Place appears on the 1921 Sanborn map under the name Majestic Apartments (LOC, 2023). It also appears in Boyd's Atlantic City Directory for 1920 (Boyd's, 1920). Located less than a block from the Boardwalk, the apartment building was seated amongst transient housing primarily hotels catering to the tourist trade. The Hotel Lockhart and St. James were located immediately next to the apartment building. The Kenderton hotel was located to the east of the apartment building on Tennessee and the Brunswick and Beachside hotels as well as the Elwood Hotel were located across the street on St. James (LOC, 2023).

Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 143 -149 South St. James Place is associated with early-twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 143 -149 South St. James Place is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 143 -149 South St. James Place is recommended Not Eligible for inclusion in the NRHP.

The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 242 South Vermont Avenue is associated with early-twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 242 South Vermont Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 242 South Vermont Avenue is recommended Not Eligible for inclusion in the NRHP.

Style:	None		
Form:	Row	Stories:	2
Type:	N/A	Bays:	1
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Brick		

Exterior Description: The residence at 137 South Texas Avenue is a two-story brick rowhouse. The roof is flat with a parapet, below which is a pent roof with asphalt shingle cladding. The second story is a single bay featuring a shallow oriel window with paired 1/1 replacement sash. The first story once had a three-bay recessed porch, but now only the entry is recessed with the flanking bays infilled with vinyl siding and mismatched 1/1 replacement sash.

Interior Description: N/A

Setting: Primarily residential area half a block away from beach/boardwalk access. Tightly packed residential buildings. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Historic Use:	Residential activity, permanent		
Construction Date:	1900	Source:	www.njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Fair
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	None		
Form:	Row	Stories:	2
Type:	N/A	Bays:	1
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Brick		

Exterior Description: The residence at 145 South Texas Avenue is a two-story brick rowhouse. The roof is flat with a parapet, below which is a pent roof with asphalt shingle cladding. The second story is a single bay featuring an angled oriel window with 1/1 replacement sash. The first story is parged, with a recessed entrance in the left bay. The fenestration is a bank of three 1/1 replacement sash.

Interior Description: N/A

Setting: Primarily residential area half a block away from beach/boardwalk access. Tightly packed residential buildings. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 145 South Texas Avenue is associated with early-twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 145 South Texas Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 145 South Texas Avenue is recommended Not Eligible for inclusion in the NRHP.

Historic Sites #:

Common Name:	217 South Metropolitan Avenue		
Historic Name:	N/A		
Present Use:	Residential activity, permanent		
Historic Use:	Residential activity, permanent		
Construction Date:	1920	Source:	www.njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Fair
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	None		
Form:	Row	Stories:	2
Type:	N/A	Bays:	1
Roof Finish Materials:	Unknown		
Exterior Finish Materials	Stucco		

Exterior Description: The residence at 217 South Metropolitan Avenue is two-story rowhouse. The building has been recently clad with brown stucco, but plywood around the entryway and exposed wood paneling on the second-story oriel window indicate that the work is not complete. The cornice has been removed and all that remains are the end brackets. The fenestration is 1/1 replacement sash. These are flat arch on the façade, but largely segmental on the side elevations. The entrance is recessed with an open foyer and a partially open sidewall.

Interior Description: N/A

Setting: Located in a diminishing residential area, across the street from Ocean Casino Resort, and almost a block away from beach/boardwalk access. Some similar residential buildings adjacent. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 217 South Metropolitan Avenue is associated with early-twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 217 South Metropolitan Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 217 South Metropolitan Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The residence at 108 Albion Place is a two-story foursquare. The building has a hipped roof with hipped roof dormers. The fenestration is paired 1/1 replacement sash. While vinyl siding appears over part of the upper elevation and roof dormers much of the exterior cladding appears to have been obscured with plywood that is in the process of being painted. There is a one-story hipped roof porch on the facade that is entirely enclosed with plywood. The basement is high and there is a temporary door on the side of the porch foundation that provides pedestrian access. A second pedestrian door is located at the top of a flight of steps at the center of the enclosed porch. A partially enclosed stair tower occupies the side elevation with ocular windows without sash and a gabled parapet. This tower is also connected to a hipped roof garage.

BUILDING ATTACHMENT

Historic Sites #:

Common Name:	147 South Texas Avenue		
Historic Name:	N/A		
Present Use:	Residential activity, permanent		
Historic Use:	Residential activity, permanent		
Construction Date:	1900	Source:	www.njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Good
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	None		
Form:	Gable Front	Stories:	3
Type:	N/A	Bays:	3
Roof Finish Materials:	Unknown		
Exterior Finish Materials	Brick		

Exterior Description: The residence at 147 South Texas Avenue is a three-story house on a gable front plan. The building is clad in vinyl siding except for the first story which is mostly clad in brick. There is a two-story enclosed porch or projection on the facade. The second story at the projection slightly overhangs the first and has a rooftop deck or balcony. There are pedestrian doors on either side of the first-story facade with 1/1 double-hung sash in between. The second story projection is three bays across with 1/1 replacement sash. The third story is three bays across one of which is occupied by a pedestrian door. The other two bays are 1/1 sash. There is a 1/1 double-hung wood sash in the gable providing illumination to the attic. The fenestration on the side elevation is four bays across with 1/1 sash. There is a secondary entrance in the third bay on the first story of the side elevation.

Interior Description: N/A

Setting: Primarily residential area, near immediate access to beach/boardwalk. Tightly packed residential buildings. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 147 South Texas Avenue is associated with early-twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 147 South Texas Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 147 South Texas Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Unknown		
Exterior Finish Materials	Wood, Clapboard		

Exterior Description: The building at 142 South Tennessee Avenue is a four-story mixed-use building. The building is three bays across the facade and nine bays deep. The roof is gabled over the first five bays on the street-facing section of the building and is flat for the remainder. There are two-story angled oriel windows, one on either end bay of the third and fourth stories of the facade. A recessed porch occupies the second-story facade. The first story is a commercial space clad in stone veneer. There is a center entry at the first story into the commercial space flanked by horizontal fixed sash. The second-story porch has a center entry with a transom and is flanked by paired 1/1 sash. The fenestration overall is 1/1 sash either single or paired. The side elevations have wall dormers on the fourth story with paired sash. The siding is wood clapboard except for at the commercial storefront and the first-story side elevations which, as noted, are stone veneer.

Interior Description: N/A

Setting: Commercial/tourist area, residences are located in the same buildings as commercial businesses. Over a block away from beach/boardwalk access. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Form:	<u>Other</u>	Stories:	<u>3</u>
Type:	<u>N/A</u>	Bays:	<u>2</u>
Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Vinyl Siding</u>		

Exterior Description: The residence at 205 South Vermont Avenue is a two-story Dutch Colonial Revival home. The building has a cross-gambrel roof and rests on a high brick basement. The building is clad in vinyl siding and fenestration is 1/1 and awning replacement sash. Fenestration is paired on the second story of the façade. There is a shed roof porch on the first-story façade supported by wood posts. The primary entrance is through the porch via a converted bay window. The gambrel roof on the side elevation is flanked by shed roof projections that form a continuous wall surface five bays across. The center bay is occupied by a tripartite window. There is an angled oriel window on the first story of the side elevation.

Interior Description: N/A

Setting: Primarily residential area with some large commercial buildings. One block away from beach/boardwalk access. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 205 South Vermont Avenue is associated with early-twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers: ☐ Yes ☒ No

National

Register Criteria: ☐ A ☐ B ☐ C ☐ D

Level of Significance

☐ Local ☐ State ☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 205 South Vermont Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 205 South Vermont Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Unknown		
Exterior Finish Materials	Aluminum Siding		

Exterior Description: The residence at 3955 First Avenue is a two-story Contemporary building on a rectangular plan. The building has a flat roof and a prominent exterior stair tower on the side elevation. The stair tower appears to have exposed framing that forms a second-story balcony and is also exhibited in the roof overhang. The balcony continues along the side elevation beyond the tower. There is a two-story bay window on the façade with fixed and casement replacement sash. Otherwise, the façade is devoid of fenestration. Windows on the side elevation and tower are fixed or slider sash. The wall cladding appears to be vertical aluminum siding. There is a carport forward of the tower.

Interior Description: N/A

Setting: The building at 3955 First Avenue is a beachfront house in a residential area. Historic aerial photography shows Avalon developing primarily within a grid of streets in the northernmost section of the island in 1920. By 1931 development had expanded to the south as well as west of the Atlantic Ocean, and by 1954 the bridge carrying present-day Ocean Drive (Route 169) had been constructed over Townsend Inlet and a bridge connecting the mainland had been constructed at present-day Old Avalon Boulevard. By 1970, the built environment appears similar to that of today, with the current configuration of Avalon, including the modern configuration of the beach, in place by 1986 (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The Borough of Avalon is in the extreme northern section of Seven Mile Island in Cape May County. The first Euro-American settlement dates to 1722 when the barrier island was purchased by Aaron Leaming who used it for logging juniper and housing livestock. The island was purchased by the Seven Mile Beach Company in 1887, and this company founded the settlement of Avalon in the north and Stone Harbor in the south. By 1890, Avalon featured two oceanside hotels, the Avalon Hotel between 7th and 8th Streets and the Piermont Hotel between 33rd and 34th Streets, as well as numerous dwellings between 5th and 7th Street along 1st and 2nd Avenues. Avalon was formally incorporated as a borough in 1892 and was touted as a resort town. A railroad was constructed to the island around this time, spurring further development. By 1905, 75 houses, a school, and two churches were constructed in Avalon, and the Avalon Beach Development Company purchased the island with the aim of further developing the area as an exclusive beach resort. A boardwalk was constructed between 21st and 32nd Streets in 1913 and is still extant to this day (VisitNJShore.com, 2023; Sanborn, 1890; NETR, 2023).

Significance: 3955 First Avenue is associated with late-twentieth-century development in Avalon Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 3955 First Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 3955 First Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Unknown		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The residence at 26 West 8th Street is a two-story modular looking home on a rectangular plan. The roof is gabled with a shallow slope, wide overhanging eaves, and exposed roof purlins. The building is raised on a CMU foundation with a carport. The fenestration on the façade is slider and 1/1 replacement sash. A pedestrian door opens onto a second-story deck. The primary entrance is reached by a set of wooden stairs on the second story of the side elevation. The fenestration on the side elevation is primarily 1/1 flat-arch replacement sash.

Interior Description: N/A

Setting: The building at 26 West 8th Street is in a residential area. It is across the street and a few houses down from the beach. Historic aerial photography shows Avalon developing primarily within a grid of streets in the northernmost section of the island in 1920. By 1931 development had expanded to the south as well as west of the Atlantic Ocean, and by 1954 the bridge carrying present-day Ocean Drive (Route 169) had been constructed over Townsend Inlet and a bridge connecting the mainland had been constructed at present-day Old Avalon Boulevard. By 1970, the built environment appears similar to that of today, with the current configuration of Avalon, including the modern configuration of the beach, in place by 1986 (NETR, 2023).

Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Wood, Clapboard</u>		

Exterior Description: The residence at 56 7th Street is a two-story, altered Queen Anne house with irregular massing. The roof system is gabled, hipped, and hexagonal. The main block is somewhat L-shaped with the projecting section on the façade surmounted by a hipped roof with a rooftop deck or window's walk. Back from the projecting section the roof is partially gabled with the gable end facing the side elevation. A brick chimney extends the height of the elevation and penetrates the eaves of the gable. The opposite end of the main block is surmounted by a steeply pitched hexagonal roof with small gabled dormers. There are brackets in the roof eaves. Forward of the projecting section with the widow's walk is a hexagonal tower with a shallow-pitched roof. The tower rises from the corner of the second story and appears almost ornamental. The exterior cladding is wood clapboard and there is a wraparound porch. The porch has a hipped roof with a widow's walk, square columns, brackets, and a gable over one of the bays. The fenestration on the façade appears to have been replaced with sliding patio doors on both stories, however, the fenestration on the side elevations is 1/1 replacement sash.

Interior Description: N/A

Setting: The building at 56 7th Street is a beachfront house in a residential area. Historic aerial photography shows Avalon developing primarily within a grid of streets in the northernmost section of the island in 1920. Roof Finish Materials:	<u>Unknown</u>		
Exterior Finish Materials	<u>Wood, Shiplap</u>		

Exterior Description: The residence at 61 Inlet Drive North is a two-story Contemporary gabled roof house. The roof has a shallow pitch with wide overhanging eaves and exposed rafter tails. The façade is asymmetrical with one half of the elevation projecting beyond the other. This extends even to the roof which projects forward on one side. The upper story on the façade overhangs the first, with each bay exhibiting a single paired casement with an angled transom extending to the roof. The fenestration on the first story is horizontally fixed with a single operable pane on one side. These also appear on the side elevations, however, fenestration on the sides is primarily floor-to-ceiling fixed sash. The wall cladding appears to be an unfinished cedar vertical shiplap. A brick chimney on the side elevation is wide and the pointing is sloppy, possibly to give it a rustic effect.

Interior Description: N/A

Setting: The building at 61 Inlet Drive North is a beachfront house in a residential area. Historic aerial photography shows Avalon developing primarily within a grid of streets in the northernmost section of the island in 1920. History: The Borough of Avalon is in the extreme northern section of Seven Mile Island in Cape May County. The first Euro-American settlement dates to 1722 when the barrier island was purchased by Aaron Leaming who used it for logging juniper and housing livestock. The island was purchased by the Seven Mile Beach Company in 1887, and this company founded the settlement of Avalon in the north and Stone Harbor in the south. By 1890, Avalon featured two oceanside hotels, the Avalon Hotel between 7th and 8th Streets and the Piermont Hotel between 33rd and 34th Streets, as well as numerous dwellings between 5th and 7th Street along 1st and 2nd Avenues. Avalon was formally incorporated as a borough in 1892 and was touted as a resort town. A railroad was constructed to the island around this time, spurring further development. By 1905, 75 houses, a school, and two churches were constructed in Avalon, and the Avalon Beach Development Company purchased the island with the aim of further developing the area as an exclusive beach resort. A boardwalk was constructed between 21st and 32nd Streets in 1913 and is still extant to this day (VisitNJShore.com, 2023; Sanborn, 1890; NETR, 2023).

Significance: 273 6th Street is associated with late-twentieth-century development in Avalon Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 273 6th Street is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 273 6th Street is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 688 1st Avenue is a one-story shed roof residence on a rectangular plan. There is a gabled-front end bay with paired floor-to-ceiling fixed sash. The fenestration across the rest of the façade is paired casement sash and the primary entrance has sidelights. The building is clad in T-111 siding. There is a rooftop deck toward the rear of the building.

Interior Description: N/A

Setting: The building at 688 1st Avenue is a beachfront house in a residential area. It is across the street from a restaurant and next to a parking area for the beach. Historic aerial photography shows Avalon developing primarily within a grid of streets in the northernmost section of the island in 1920. By 1931 development had expanded to the south as well as west of the Atlantic Ocean, and by 1954 the bridge carrying present-day Ocean Drive (Route 169) had been constructed over Townsend Inlet and a bridge connecting the mainland had been constructed at present-day Old Avalon Boulevard. By 1970, the built environment appears similar to that of today, with the current configuration of Avalon, including the modern configuration of the beach, in place by 1986 (NETR, 2023).

Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Vinyl Siding</u>		

Exterior Description: The residence at 2013 Seaview Avenue is a two-story New Traditional Shingle-style home with a broken hipped roof. A prominent shingle-clad tower with an oculus and chimney stack penetrates the roof at the point that the hipped roof breaks. One section of the roof projects far beyond the other. The first story has a large wraparound porch with shingled supports and a rooftop balcony overlooking the ocean. The fenestration is largely fixed, slider, or casement sash ranging from small to floor-to-ceiling.

Interior Description: N/A

Setting: The residence at 2013 Seaview Avenue is an oceanfront property surrounded by like buildings with direct beach access. Barnegat Light Borough occupies the northern tip of Long Beach Island. It is defined by a rectilinear grid two blocks in width going east-west. The grid is open on the ocean side with no parallel through-road; each east-west street terminates at a dead end at the beach. The grid runs along a central arterial aptly named Central Avenue. The cross streets are sequentially numbered starting from the northern tip of the island which is occupied by the Barnegat Lighthouse and state park.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Barnegat Light Borough is in the extreme eastern extent of Ocean County at the northern tip of Long Beach Island. This area of Long Beach Island was first visited by European explorers in 1609 when Henry Hudson reached the vicinity of the borough. The Dutch eventually came to call this area Barendegat, or "Island of the Breakers" for the dangerous sea conditions encountered. The area was used as a hunting and fishing ground for Euro-American settlers in the early nineteenth century. By the middle of the nineteenth century, vacationers from New York reached Barnegat Light Borough by traveling to the mouth of Toms River and sailing south down Barnegat Bay to reach the northern end of Long Beach Island. A railroad trestle was constructed in 1886 connecting the island to the mainland. In 1904, the area was incorporated as Barnegat City and was formally separated from Long Beach Township. It was renamed Barnegat Light in 1948 in commemoration of the lighthouse, which had become a landmark on the island. In the 1920s, Norwegian settlers founded the fishing village appropriately named Viking Village on the inlet located on the western side of the borough. The lighthouse and surrounding land were acquired by the state of New Jersey in 1957 and converted into a state park. This area of Long Beach Island continues to be a popular destination for boaters, fishers, and beachgoers (Barnegat Light Tourism Coalition, 2022).

Significance: The residence at 2013 Seaview Avenue is associated with late-twentieth-century development in Barnegat Light Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

Roof Finish Materials: Asphalt Shingle

Exterior Finish Materials Wood, Shingles

Exterior Description: The residence at 107 Chatsworth Avenue is a one-and-one-half-story bungalow with a front gable roof. There are shingle clad shed-roof dormers on the side of the roof. A recessed porch occupies the first story of the façade with shingle-clad corner supports. The gable is also clad in wood shingle siding on the façade and upper part of the side elevations which flare out slightly. The side elevations are clad in asbestos shingles on the first story. The fenestration overall is 1/1 replacement sash. Evergreen trees obscure much of the façade.

Interior Description: N/A

Setting: The building at 107 Chatsworth Avenue is surrounded by like buildings with beach access to the east down the road. Historic aerial imagery shows that Beach Haven was almost entirely developed by 1920, and the entire borough was completely built out by 1956. The Great Atlantic Hurricane of 1944 caused extensive damage to the borough's hotels and boardwalk and another storm in 1962 resulted in a new zoning law requiring any new constructions to be built on stilts. Beach Haven continues to be a popular seasonal beach community (Beach Haven, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Beach Haven Borough is in the extreme southern extent of Ocean County in the southern portion of Long Beach Island. As early as 1690, Euro-American settlers used Long Beach Island seasonally for fishing, whaling, gathering plants, and harvesting sea salt, but present-day Beach Haven remained relatively undeveloped until the 1870s. In 1871, Captain Tilton Fox bought the Harvey Cedars Life Saving Station, moved it to Beach Haven, and opened it as the Hotel de Crab. The development of cottages, hotels, and roads accelerated over the next decades, cementing Beach Haven as a popular summer getaway for wealthy people from Philadelphia. In 1886, Beach Haven became accessible directly by railroad with the construction of the Long Beach Railroad. In 1880, Beach Haven was incorporated as a borough. By the turn of the twentieth century, Beach Haven had a flourishing commercial economy and tourism industry. In 1914, Beach Haven became accessible by automobile with the construction of a causeway over Barnegat Bay and a boulevard to Beach Haven. The causeway was met with great excitement and supported continued development in Beach Haven in the subsequent decades. (Long Beach Island, 2023; Beach Haven, 2023; U.S. Lifesaving Service, 2023; Heritage Studies, 1981).

Significance: The building at 107 Chatsworth Avenue is associated with early-twentieth-century development in Beach Haven Borough. The building is not representative of a significant architectural style or type and is not architecturally significant.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 101 Centre Street is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 101 Centre Street is recommended Not Eligible for inclusion in the NRHP.

Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Stucco		

Exterior Description: The residence at 1000 South Atlantic Avenue is a two-story Colonial Revival on a center-hall plan. The roof is side-gabled with a pair of hipped-roof dormers. A wide brick chimney penetrates the roof at one end near the ridge line. The fenestration is four bays across on the upper story with 6/6 double-hung sash. On the first story, the center entrance is flanked by 10-light paired casement sash. The entry is flanked by sidelights and is surmounted by a fanlight. There is a one-story porch across the façade with square columns supporting an entablature which is arched at each bay. One-story gabled side wings flank the building with the one to the left of the façade fenestrated with ribbon windows for a sunroom. The window bays are enframed with entablature, pilasters, and paneled spandrels. There is a small, covered balcony above projecting from the wall surface of the main house block. The opposite wing has a tripartite window and a gabled entry porch for a side entrance. Overall, the house is clad in stucco and the foundation is unpainted brick.

Interior Description: N/A

Setting: The residence at 1000 South Atlantic Avenue is surrounded by like buildings with beach access across the street. Historic aerial imagery shows that Beach Haven was almost entirely developed by 1920, and the entire borough was completely built out by 1956. The Great Atlantic Hurricane of 1944 caused extensive damage to the borough's hotels and boardwalk and another storm in 1962 resulted in a new zoning law requiring any new constructions to be built on stilts. Beach Haven continues to be a popular seasonal beach community (Beach Haven, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Beach Haven Borough is located in the extreme southern extent of Ocean County in the southern portion of Long Beach Island. As early as 1690, Euro-American settlers used Long Beach Island seasonally for fishing, whaling, gathering plants, and harvesting sea salt, but present-day Beach Haven remained relatively undeveloped until the 1870s. In 1871, Captain Tilton Fox bought the Harvey Cedars Life Saving Station, moved it to Beach Haven, and opened it as the Hotel de Crab. The development of cottages, hotels, and roads accelerated over the next decades, cementing Beach Haven as a popular summer getaway for wealthy people from Philadelphia. In 1886, Beach Haven became accessible directly by railroad with the construction of the Long Beach Railroad. In 1880, Beach Haven was incorporated as a borough. By the turn of the twentieth century, Beach Haven had a flourishing commercial economy and tourism industry. In 1914, Beach Haven became accessible by automobile with the construction of a causeway over Barnegat Bay and a boulevard to Beach Haven. The causeway was met with great excitement and supported continued development in Beach Haven in the subsequent decades. (Long Beach Island, 2023; Beach Haven, 2023; U.S. Lifesaving Service, 2023; Heritage Studies, 1981).

Significance: The building at 1000 South Atlantic Avenue is associated with early-twentieth-century development in Beach Haven Borough. While the building is representative of a significant architectural style, it is a common type and is not architecturally significant.

Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Wood, Shingles		

Exterior Description: The residence at 910 South Atlantic Avenue is a two-and-one-half-story cross-gable Colonial Revival-style house inspired by post-medieval colonial architecture. The building is clad with wood-shingle siding. There is a slight flare in the siding separating the first and second stories on two-thirds of the façade. The fenestration is primarily 6/6 double-hung sash except for a wide picture window on the center projecting bay of the first story. Instead of being located in the central projecting bay like its colonial antecedents, the primary entrance is on the side elevation within an enclosed recessed porch. A secondary entrance is on the opposite end facing the driveway within a partially recessed porch and a gabled projecting bay that is partially enclosed.

Interior Description: N/A

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Berkeley Township is located in the northern limit of Atlantic County and is bounded on the north by Cedar Creek, on the east by Barnegat Bay, on the south by Toms River, and on the west by Manchester Township. The first Euro-American settlers in this area of Atlantic County were English and arrived in the late seventeenth century. The early economies capitalized on the abundant pine barren forests and proximity to Barnegat Bay and Toms River. Agriculture, lumbering, milling, and boatbuilding were the principal trades. Throughout the eighteenth century, the township was predominantly rural with scattered settlements. The township was formally incorporated in 1875 from Dover Township and Bayville, incorporated in 1881, was the primary locale. The Toms River and Waretown Railroad arrived in the area in 1872 and with it brought sportsmen, vacationers, and new residents. The railroad also spurred the export of local produce and fish and shellfish which helped to sustain a diversified agricultural economy. By the early twentieth century, pound fishing (the trapping of large quantities of fish in large nets) and cranberry harvesting became lucrative economies in the township. Although a number of resort communities were proposed and platted in the township, Berkeley Township remained rural and undeveloped throughout the twentieth century. The late twentieth and early twenty-first century brought a proliferation of housing to the township which is largely confined to the bayfront areas (Heritage Studies, Inc., 1981).

Significance: 83 Central Avenue is associated with twentieth-century development in South Seaside Park and Berkeley Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Berkeley Township is located in the northern limit of Atlantic County and is bounded on the north by Cedar Creek, on the east by Barnegat Bay, on the south by Toms River, and on the west by Manchester Township. The first Euro-American settlers in this area of Atlantic County were English and arrived in the late seventeenth century. The early economies capitalized on the abundant pine barren forests and proximity to Barnegat Bay and Toms River. Agriculture, lumbering, milling, and boatbuilding were the principal trades. Throughout the eighteenth century, the township was predominantly rural with scattered settlements. The township was formally incorporated in 1875 from Dover Township and Bayville, incorporated in 1881, was the primary locale. The Toms River and Waretown Railroad arrived in the area in 1872 and with it brought sportsmen, vacationers, and new residents. The railroad also spurred the export of local produce and fish and shellfish which helped to sustain a diversified agricultural economy. By the early twentieth century, pound fishing (the trapping of large quantities of fish in large nets) and cranberry harvesting became lucrative economies in the township. Although a number of resort communities were proposed and platted in the township, Berkeley Township remained rural and undeveloped throughout the twentieth century. The late twentieth and early twenty-first century brought a proliferation of housing to the township which is largely confined to the bayfront areas (Heritage Studies, Inc., 1981).

Significance: 81 Central Avenue is associated with twentieth-century development in South Seaside Park and Berkeley Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 81 Central Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 81 Central Avenue is recommended Not Eligible for inclusion in the NRHP.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Berkeley Township is located in the northern limit of Atlantic County and is bounded on the north by Cedar Creek, on the east by Barnegat Bay, on the south by Toms River, and on the west by Manchester Township. The first Euro-American settlers in this area of Atlantic County were English and arrived in the late seventeenth century. The early economies capitalized on the abundant pine barren forests and proximity to Barnegat Bay and Toms River. Agriculture, lumbering, milling, and boatbuilding were the principal trades. Throughout the eighteenth century, the township was predominantly rural with scattered settlements. The township was formally incorporated in 1875 from Dover Township and Bayville, incorporated in 1881, was the primary locale. The Toms River and Waretown Railroad arrived in the area in 1872 and with it brought sportsmen, vacationers, and new residents. The railroad also spurred the export of local produce and fish and shellfish which helped to sustain a diversified agricultural economy. By the early twentieth century, pound fishing (the trapping of large quantities of fish in large nets) and cranberry harvesting became lucrative economies in the township. Although a number of resort communities were proposed and platted in the township, Berkeley Township remained rural and undeveloped throughout the twentieth century. The late twentieth and early twenty-first century brought a proliferation of housing to the township which is largely confined to the bayfront areas (Heritage Studies, Inc., 1981).

Significance: 190 Central Avenue is associated with twentieth-century development in South Seaside Park and Berkeley Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Justification of Eligibility/Ineligibility: Does not appear to retain sufficient exterior integrity or exhibit architectural significance. Background research did not reveal any associations with historically important events or persons; therefore, 160 Central Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 160 Central Avenue is recommended Not Eligible for inclusion in the NRHP.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Berkeley Township is located in the northern limit of Atlantic County and is bounded on the north by Cedar Creek, on the east by Barnegat Bay, on the south by Toms River, and on the west by Manchester Township. The first Euro-American settlers in this area of Atlantic County were English and arrived in the late seventeenth century. The early economies capitalized on the abundant pine barren forests and proximity to Barnegat Bay and Toms River. Agriculture, lumbering, milling, and boatbuilding were the principal trades. Throughout the eighteenth century, the township was predominantly rural with scattered settlements. The township was formally incorporated in 1875 from Dover Township and Bayville, incorporated in 1881, was the primary locale. The Toms River and Waretown Railroad arrived in the area in 1872 and with it brought sportsmen, vacationers, and new residents. The railroad also spurred the export of local produce and fish and shellfish which helped to sustain a diversified agricultural economy. By the early twentieth century, pound fishing (the trapping of large quantities of fish in large nets) and cranberry harvesting became lucrative economies in the township. Although a number of resort communities were proposed and platted in the township, Berkeley Township remained rural and undeveloped throughout the twentieth century. The late twentieth and early twenty-first century brought a proliferation of housing to the township which is largely confined to the bayfront areas (Heritage Studies, Inc., 1981).

Significance: 158 A Central Avenue is associated with twentieth-century development in South Seaside Park and Berkeley Township. The building is not representative of a significant architectural style or type and is not architecturally significant

Justification of Eligibility/Ineligibility: Does not appear to retain sufficient exterior integrity or exhibit architectural significance. Background research did not reveal any associations with historically important events or persons; therefore, 188 Central Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 188 Central Avenue is recommended Not Eligible for inclusion in the NRHP.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Berkeley Township is in the northern limit of Atlantic County and is bounded on the north by Cedar Creek, on the east by Barnegat Bay, on the south by Toms River, and on the west by Manchester Township. The first Euro-American settlers in this area of Atlantic County were English and arrived in the late seventeenth century. The early economies capitalized on the abundant pine barren forests and proximity to Barnegat Bay and Toms River. Agriculture, lumbering, milling, and boatbuilding were the principal trades. Throughout the eighteenth century, the township was predominantly rural with scattered settlements. The township was formally incorporated in 1875 from Dover Township and Bayville, incorporated in 1881, was the primary locale. The Toms River and Waretown Railroad arrived in the area in 1872 and with it brought sportsmen, vacationers, and new residents. The railroad also spurred the export of local produce and fish and shellfish which helped to sustain a diversified agricultural economy. By the early twentieth century, pound fishing (the trapping of large quantities of fish in large nets) and cranberry harvesting became lucrative economies in the township. Although a number of resort communities were proposed and platted in the township, Berkeley Township remained rural and undeveloped throughout the twentieth century. The late twentieth and early twenty-first century brought a proliferation of housing to the township which is largely confined to the bayfront areas (Heritage Studies, Inc., 1981).

Significance: 186 Central Avenue is associated with twentieth-century development in South Seaside Park and Berkeley Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Type:	N/A	Bays:	2
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 13 Ocean Front Terrace is a three-story side-gabled residence located directly on the beach and constructed into an embankment. The beach front elevation has a projecting first story with a deck and a secondary deck on top of the projection. The fenestration on this elevation is largely obscured by rolltop doors. The rear elevation steps down with a flat-roof projection extending over a wide carport located below grad. The fenestration on this elevation is paired sash. The entry is next to the carport with a secondary entrance on the opposite side under a shed roof. The siding is vinyl shingle, and the chimney appears to be clad in textured sheeting.

Interior Description: N/A

Setting: The building at 13 Ocean Front Terrace is a beach front property along a private dirt residential road within a T-shaped development called Fisherman Dunes, part of the Brick Barrier Island neighborhood. Adjacent to the residence is a private access path to the beach. Brick Barrier Island, also known as Brick Beaches, is located in the extreme eastern section of Brick Township on the barrier island immediately south of Mantoloking Borough. The modern-day built landscape reflects the mid-twentieth century development pattern with private enclaves, or sub-neighborhoods, extending from the north-south Route 35 arterial and developing along private dirt roads. Each enclave is overseen by a homeowner's association, and many have private beach access.

Surveyor:	Grant Johnson and Laura Mancuso		
Organization:	Environmental Design & Research, Landscape Architecture, Engineering & Environmental Services, D.P.C		

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 13 Ocean Front Terrace is located in a mid-twentieth century development called Fisherman Dunes. The development has private beach access, and it is overseen by Fishermen Dunes Property Owners Association which was incorporated in 1964 (Bizapedia, 2023). Historical aerial photographs show that as late as 1940 the area was an almost completely undeveloped beach. By 1953, however, Cuttyhunk Road and Ocean Front Terrace have been constructed and homes along Cuttyhunk have been completed. Small cottages appear along the beach front. These are gone by 1956 and new larger housing appear. The residence at 13 Ocean Front Terrace is the last constructed in the development in 1973 with all others completed by 1963 (NETR, 2023).

Brick township has a history dating back to the 1740s when dense woodland attracted the sawmill and charcoal industries (Town of Brick, 2023). However, Brick Barrier Island was late to develop, remaining largely unspoiled beach into the 1930s (Roberts and Zeilman, 2017). The construction of the Mantoloking Bridge in 1884 spurred development on the barrier island and Mantoloking was incorporated as a separate borough in 1911 (Borough of Mantoloking, 2022). The construction of U.S. Route 35 in 1908 served as a connection to the mainland for Brick Barrier Island via Mantoloking and the bridge, otherwise, the area has no physical connection to the rest of the town. Historical aerial photography shows Brick Barrier Island developing along Route 35 starting primarily in the 1930s, but intensive development does not become apparent until the post-WWII period with the entire region completely built out by the 1970s (Roberts and Zeilman, 2017).

Significance: 13 Ocean Front Terrace is associated with late-twentieth-century development in Brick Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

Type:	<u>N/A</u>	Bays:	<u>3</u>
Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Wood, Shingles</u>		

Exterior Description: The residence at 546 Ocean Terrace is a three-story gable-roof home. The first story is a half-open concrete pad with unfinished logs supporting the home above. The other half is an enclosed stucco-clad bay with a side entrance. The fenestration on the first story faces the street. The upper stories are clad in wood shingles but are otherwise devoid of decoration. The regular fenestration is 1/1 and 6/6 flat-arch sash. The ocean-facing elevation projects a single bay in depth and is surmounted by a flat roof. An elevated deck extends from the ocean-facing elevation over the beach.

Interior Description: N/A

Setting: The residence at 546 Ocean Terrace is sited on a paved residential street that runs parallel to the beach at the end of a rectilinear development. The house faces the ocean and is adjacent to a beach access path. Brick Barrier Island, also known as Brick Beaches, is located in the extreme eastern section of Brick Township on the barrier island immediately south of Mantoloking Borough. The modern-day built landscape reflects the mid-twentieth century development pattern with private enclaves, or sub-neighborhoods, extending from the north-south Route 35 arterial and developing along private dirt roads. Each enclave is overseen by a homeowner's association, and many have private beach access.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Brick township has a history dating back to the 1740s when dense woodland attracted the sawmill and charcoal industries (Town of Brick, 2023). However, Brick Barrier Island was late to develop, remaining largely unspoiled beach into the 1930s (Roberts and Zeilman, 2017). The construction of the Mantoloking Bridge in 1884 spurred development on the barrier island and Mantoloking was incorporated as a separate borough in 1911 (Borough of Mantoloking, 2022). The construction of U.S. Route 35 in 1908 served as a connection to the mainland for Brick Barrier Island via Mantoloking and the bridge, otherwise, the area has no physical connection to the rest of the town. Historical aerial photography shows Brick Barrier Island developing along Route 35 starting primarily in the 1930s, but intensive development does not become apparent until the post-WWII period with the entire region completely built out by the 1970s (Roberts and Zeilman, 2017).

Significance: 546 Ocean Terrace is associated with mid-twentieth-century development in Brick Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 546 Ocean Terrace is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 546 Ocean Terrace is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The residence at 11 Ocean Front Terrace is a two-story embanked home with a cross-gable roof. The gable front elevation faces the ocean. The building is clad with vinyl shingle siding and has 2/2 replacement sash irregularly placed. The deeply recessed entry is below grade on the street-facing elevation. A standing seam metal pent roof extends halfway across the street-facing elevation separating the first and second stories. The pent roof ends where a windowless projection extends from the wall surface on the second story. The projection is supported from underneath by square supports.

Interior Description: N/A

Setting: 11 Ocean Front Terrace is a beach front property along a private dirt residential road within a T-shaped development called Fisherman Dunes, part of the Brick Barrier Island neighborhood. Adjacent to the residence is a private access path to the beach. Brick Barrier Island, also known as Brick Beaches, is located in the extreme eastern section of Brick Township on the barrier island immediately south of Mantoloking Borough. The modern-day built landscape reflects the mid-twentieth century development pattern with private enclaves, or sub-neighborhoods, extending from the north-south Route 35 arterial and developing along private dirt roads. ELIGIBILITY WORKSHEET

Historic Sites #:

History: 11 Ocean Front Terrace is located in a mid-twentieth century development called Fisherman Dunes. The development has private beach access, and it is overseen by Fishermen Dunes Property Owners Association which was incorporated in 1964 (Bizapedia, 2023). Historical aerial photographs show that as late as 1940 the area was an almost completely undeveloped beach. By 1953, however, Cuttyhunk Road and Ocean Front Terrace have been constructed and homes along Cuttyhunk have been completed. Small cottages appear along the beach front. These are gone by 1956 and new larger housing appear. The residence at 11 Ocean Front Terrace first appears in the historic aerial for 1963 (NETR, 2023).

Brick township has a history dating back to the 1740s when dense woodland attracted the sawmill and charcoal industries (Town of Brick, 2023). However, Brick Barrier Island was late to develop, remaining largely unspoiled beach into the 1930s (Roberts and Zeilman, 2017). The construction of the Mantoloking Bridge in 1884 spurred development on the barrier island and Mantoloking was incorporated as a separate borough in 1911 (Borough of Mantoloking, 2022). The construction of U.S. Route 35 in 1908 served as a connection to the mainland for Brick Barrier Island via Mantoloking and the bridge, otherwise, the area has no physical connection to the rest of the town. Historical aerial photography shows Brick Barrier Island developing along Route 35 starting primarily in the 1930s, but intensive development does not become apparent until the post-WWII period with the entire region completely built out by the 1970s (Roberts and Zeilman, 2017).

Significance: 11 Ocean Front Terrace is associated with mid-twentieth-century development in Brick Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The residence at 498 Sunset Boulevard is a four-story side-gable house built into an embankment. The street facing elevation features a gabled dormer. The fenestration is 6/1 replacement sash three and four bays across. The house is clad in wood shingle siding. The street-facing elevation steps down and features a two-bay carport below grade that is clad in stone veneer. Wooden steps lead to the entrance on the side elevation of the second story. Adjacent to this is a projecting bay with an additional entry. A brick chimney, painted white, extends through the roof eaves.

Interior Description: N/A

Setting: The residence at 498 Sunset Boulevard is a beach front property with private beach access. The house is located in the early twentieth century development of Deauville Beach which is composed of a rectilinear grid. Three streets (Jeanette, Deauville, and Georgian drives) extend east from U.S. Route 35 and terminate at Sunset Boulevard which runs parallel to the beach.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: 498 Sunset Boulevard is located in the rectilinear development of Deauville Beach platted in 1925 (Havens, 1925). Historical aerial photographs show that between 1931 and 1933 much of the development was built out, though with perhaps larger homes than envisioned as many of these occupy multiple narrow lots (NETR, 2023).

Brick township has a history dating back to the 1740s when dense woodland attracted the sawmill and charcoal industries (Town of Brick, 2023). However, Brick Barrier Island was late to develop, remaining largely unspoiled beach into the 1930s (Roberts and Zeilman, 2017). The construction of the Mantoloking Bridge in 1884 spurred development on the barrier island and Mantoloking was incorporated as a separate borough in 1911 (Borough of Mantoloking, 2022). The construction of U.S. Route 35 in 1908 served as a connection to the mainland for Brick Barrier Island via Mantoloking and the bridge, otherwise, the area has no physical connection to the rest of the town. Historical aerial photography shows Brick Barrier Island developing along Route 35 starting primarily in the 1930s, but intensive development does not become apparent until the post-WWII period with the entire region completely built out by the 1970s (Roberts and Zeilman, 2017).

Significance: 498 Sunset Boulevard is associated with early to mid-twentieth-century development in Brick Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Historic Use:	Residential Activity, Permanent		
Construction Date:	1970	Source:	njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Good
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	Colonial Revival		
Form:	Other	Stories:	2
Type:	N/A	Bays:	6
Roof Finish Materials:	Wood, Shingles		
Exterior Finish Materials	Wood, Shingles		

Exterior Description: The residence at 101 Faber Lane is a two-story side-gable house on a rectangular plan constructed into an embankment. It has wood shingle siding and a wraparound porch on the beach-facing elevation, which due to the grade presents as a single story. The porch roof is hipped and is supported by square columns resting on a concrete pad. Two-thirds of the beach elevation is glazed floor to the roofline. The street-facing elevation presents as a two-story Colonial with 12/1 and 12/12 sash with working shutters and a center entry with sidelights. The entry is shielded by a pent roof supported by square posts. A carport to the left of the entry is recessed with a barn door.

Interior Description: N/A

Setting: 101 Faber Lane is a beach front property at the end of a dirt residential road, part of the Brick Barrier Island neighborhood. Brick Barrier Island, also known as Brick Beaches, is located in the extreme eastern section of Brick Township on the barrier island immediately south of Mantoloking Borough. The modern-day built landscape reflects the mid-twentieth century development pattern with private enclaves, or sub-neighborhoods, extending from the north-south Route 35 arterial and developing along private dirt roads. Each enclave is overseen by a homeowner's association, and many have private beach access.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Brick township has a history dating back to the 1740s when dense woodland attracted the sawmill and charcoal industries (Town of Brick, 2023). However, Brick Barrier Island was late to develop, remaining largely unspoiled beach into the 1930s (Roberts and Zeilman, 2017). The construction of the Mantoloking Bridge in 1884 spurred development on the barrier island and Mantoloking was incorporated as a separate borough in 1911 (Borough of Mantoloking, 2022). The construction of U.S. Route 35 in 1908 served as a connection to the mainland for Brick Barrier Island via Mantoloking and the bridge, otherwise, the area has no physical connection to the rest of the town. Historical aerial photography shows Brick Barrier Island developing along Route 35 starting primarily in the 1930s, but intensive development does not become apparent until the post-WWII period with the entire region completely built out by the 1970s (Roberts and Zeilman, 2017).

Significance: 101 Faber Lane is associated with mid-twentieth-century development in Brick Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 101 Faber Lane is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 101 Faber Lane is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 104 Lyndhurst Drive is a heavily altered one-and-one-half-story ca. 1935 Cape Cod dwelling raised on wood pilings and in infilled ground floor. The exterior is clad in vinyl siding and stucco, and the asphalt shingle roof has a shed-roof dormer. Window openings have been altered and consist of one-over-one vinyl windows as well as large, modern casement windows. Sliding glass doors have also been added. A large second-story deck extends across the beach-facing (east) elevation and wraps around the north elevation.

Interior Description: N/A

Setting: The resource is located on the beach in a residential neighborhood located along the shore with direct beach access. Brick Barrier Island, also known as Brick Beaches, is located in the extreme eastern section of Brick Township on the barrier island immediately south of Mantoloking Borough. The modern-day built landscape reflects the mid-twentieth century development pattern with private enclaves, or sub-neighborhoods, extending from the north-south Route 35 arterial and developing along private dirt roads. ELIGIBILITY WORKSHEET

Historic Sites #:

History: Brick township has a history dating back to the 1740s when dense woodland attracted the sawmill and charcoal industries (Town of Brick, 2023). However, Brick Barrier Island was late to develop, remaining largely unspoiled beach into the 1930s (Roberts and Zeilman, 2017). The construction of the Mantoloking Bridge in 1884 spurred development on the barrier island and Mantoloking was incorporated as a separate borough in 1911 (Borough of Mantoloking, 2022). The construction of U.S. Route 35 in 1908 served as a connection to the mainland for Brick Barrier Island via Mantoloking and the bridge, otherwise, the area has no physical connection to the rest of the town. Historical aerial photography shows Brick Barrier Island developing along Route 35 starting primarily in the 1930s, but intensive development does not become apparent until the post-WWII period with the entire region completely built out by the 1970s (Roberts and Zeilman, 2017).

The building at 104 Lyndhurst Drive was built in about 1935 as part of a development of seaside cottages primarily built between 1930 and 1960 (NETR, 2023).

Significance: 104 Lyndhurst Drive is associated with twentieth-century development in Brick Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Wood, Shingles		

Exterior Description: The residence at 166 Sunset Lane North is a three-story wood-shingle clad house with a cross-gable roof system. The building is constructed into an embankment with a rusticated CMU first story below grade. The first story features a two-bay carport; however, the left bay has been infilled with a pedestrian door, a single six-pane sash, and shingle siding, likely to create additional living space. The entry has a gabled overhang supported by square posts with railings. The upper stories are two bays across with a variety of replacement sash types. An oriel window with a hipped roof occupies the second-story bay above the intact carport. A brick chimney extends the height of the side elevation and penetrates the roof eaves. Wooden stairs on either side of the house lead to a deck on the beach-side elevation.

Interior Description: N/A

Setting: 166 Sunset Lane North is a beachfront home located in the Brick Barrier Island neighborhood along a dead-end road that runs parallel to the beach. Brick Barrier Island, also known as Brick Beaches, is located in the extreme eastern section of Brick Township on the barrier island immediately south of Mantoloking Borough. Interior Description: N/A

Setting: The resource is located on the beach in a residential neighborhood located along the shore with direct beach access. Brick Barrier Island, also known as Brick Beaches, is located in the extreme eastern section of Brick Township on the barrier island immediately south of Mantoloking Borough. The modern-day built landscape reflects the mid-twentieth century development pattern with private enclaves, or sub-neighborhoods, extending from the north-south Route 35 arterial and developing along private dirt roads. Each enclave is overseen by a homeowner's association, and many have private beach access.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Brick township has a history dating back to the 1740s when dense woodland attracted the sawmill and charcoal industries (Town of Brick, 2023). However, Brick Barrier Island was late to develop, remaining largely unspoiled beach into the 1930s (Roberts and Zeilman, 2017). The construction of the Mantoloking Bridge in 1884 spurred development on the barrier island and Mantoloking was incorporated as a separate borough in 1911 (Borough of Mantoloking, 2022). The construction of U.S. Route 35 in 1908 served as a connection to the mainland for Brick Barrier Island via Mantoloking and the bridge, otherwise, the area has no physical connection to the rest of the town. Historical aerial photography shows Brick Barrier Island developing along Route 35 starting primarily in the 1930s, but intensive development does not become apparent until the post-WWII period with the entire region completely built out by the 1970s (Roberts and Zeilman, 2017).

The building at 492 Sunset Boulevard was built in about 1954 as part of a development of seaside cottages primarily built between 1930 and 1960 (NETR, 2023).

Significance: 492 Sunset Boulevard is associated with mid-twentieth-century development in Brick Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 492 Sunset Boulevard is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 492 Sunset Boulevard is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The residence at 14 Falls Road is a two-story split level with a gable roof. The building is constructed into an embankment with the street-facing elevation presenting as two stories. The street elevation is three bays across with a center entry. A pent roof separates the first and second stories and merges into a hipped overhang without supports above the entry. The bay to the right of the entry is a carport, while that to the left features paired 1/1 replacement sash. Fenestration on the upper façade is 1/1 and sliding replacement sash. The building is clad in vinyl shingle siding, including on the façade of the masonry first story while the sides of the first story are parged. The beach elevation appears to have a porch with a large rooftop deck. A brick chimney surmounts the center of the roof at the ridge.

Interior Description: N/A

Setting: 14 Falls Road is a beach front property located on a dirt road at the end of a T-shaped development. The Falls Road development is located in the Brick Barrier Island neighborhood. Brick Barrier Island, also known as Brick Beaches, is located in the extreme eastern section of Brick Township on the barrier island immediately south of Mantoloking Borough. Exterior Description: The residence at 502 Sunset Boulevard is a three-story cross-gable building with a steeply pitched roof. The beach-facing elevation is angled outward from the center and features broad glazed fenestration that extends up to the roofline. A two-tier deck occupies the second and third-story façade. The building is clad in vinyl siding and there is a two-bay carport at the first story of the rear elevation. On the rear elevation, a pent roof separates the first story from the upper stories. Fenestration is paired 2/2 replacement sash. The house was originally two stories but was elevated in 2013. Consequently, the entry is on the side elevation of the second story. The entry is reached by wooden steps that connect with the second-story deck which wraps around from the beach elevation to the side elevation and is supported by braces rather than posts.

Interior Description: N/A

Setting: The residence at 502 Sunset Boulevard is a beach front property with private beach access. The house is located in the early twentieth-century development of Deauville Beach which is composed of a rectilinear grid. Three streets (Jeanette, Deauville, and Georgian drives) extend east from U.S. Route 35 and terminate at Sunset Boulevard which runs parallel to the beach.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: 502 Sunset Boulevard is located in the rectilinear development of Deauville Beach plated in 1925 (Havens, 1925). Historical aerial photographs show that between 1931 and 1933 much of the development was built out, though with perhaps larger homes than envisioned as many of these occupy multiple narrow lots. The house at 502 Sunset Boulevard first appears in the 1972 historic aerial (NETR, 2023).

Brick township has a history dating back to the 1740s when dense woodland attracted the sawmill and charcoal industries (Town of Brick, 2023). However, Brick Barrier Island was late to develop, remaining largely unspoiled beach into the 1930s (Roberts and Zeilman, 2017). The construction of the Mantoloking Bridge in 1884 spurred development on the barrier island and Mantoloking was incorporated as a separate borough in 1911 (Borough of Mantoloking, 2022). The construction of U.S. Route 35 in 1908 served as a connection to the mainland for Brick Barrier Island via Mantoloking and the bridge, otherwise, the area has no physical connection to the rest of the town. Historical aerial photography shows Brick Barrier Island developing along Route 35 starting primarily in the 1930s, but intensive development does not become apparent until the post-WWII period with the entire region completely built out by the 1970s (Roberts and Zeilman, 2017).

Historic Sites #:

History: Brick township has a history dating back to the 1740s when dense woodland attracted the sawmill and charcoal industries (Town of Brick, 2023). However, Brick Barrier Island was late to develop, remaining largely unspoiled beach into the 1930s (Roberts and Zeilman, 2017). The construction of the Mantoloking Bridge in 1884 spurred development on the barrier island and Mantoloking was incorporated as a separate borough in 1911 (Borough of Mantoloking, 2022). The construction of U.S. Route 35 in 1908 served as a connection to the mainland for Brick Barrier Island via Mantoloking and the bridge, otherwise, the area has no physical connection to the rest of the town. Historical aerial photography shows Brick Barrier Island developing along Route 35 starting primarily in the 1930s, but intensive development does not become apparent until the post-WWII period with the entire region completely built out by the 1970s (Roberts and Zeilman, 2017).

The building at 12 Falls Road was built in about 1960 as part of a development of seaside cottages primarily built between 1930 and 1960 (NETR, 2023).

Significance: 12 Falls Road is associated with mid-twentieth-century development in Brick Township. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 12 Falls Road is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 12 Falls Road is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: 142 Sunset Lane North is an elevated side-gable bungalow with wood shingle siding. The residence is constructed into an embankment and presents as two stories on the street-facing elevation. There is a shed roof dormer on the street-facing elevation with paired casement replacement sash. The upper story is two bays across also with paired casement replacement sash. The first story is constructed of rusticated CMU and features a two-bay carport. The right bay has been infilled with wood singles and an 8/8 replacement sash. A pedestrian entry is located between the two bays. There is a projecting shed roof bay on the side elevation of the upper story. A brick chimney on the opposite elevation penetrates the roof eaves. Beyond the chimney toward the beach appears to be the primary entry which is reached by a set of wooden stairs. The fenestration on this side is 1/1 replacement sash. There appears to be a deck on the beach facing elevation.

Interior Description: N/A

Setting: 142 Sunset Lane North is a beachfront home located in the Brick Barrier Island neighborhood along a dead-end road that runs parallel to the beach. Brick Barrier Island, also known as Brick Beaches, is located in the extreme eastern section of Brick Township on the barrier island immediately south of Mantoloking Borough. The modern-day built landscape reflects the mid-twentieth century development pattern with private enclaves, or sub-neighborhoods, extending from the north-south Route 35 arterial and developing along private dirt roads. Each enclave is overseen by a homeowner's association, and many have private beach access.

Exterior Description: The building at 222 3rd Street is a three-story hipped-roof home with a stone exterior on the first-story façade and vinyl siding elsewhere. The façade is three bays with octagon porthole windows in the right bay. Otherwise, the fenestration is 6/6 simulated divided light sash. The first and second-story façade projects forward of the main block and is surmounted by a shed roof. A pent roof separates the first and second-story façade. The entrance is on the side elevation.

Interior Description: N/A

Setting: The resource is in a residential neighborhood, surrounded by other homes, one and a half blocks from Brigantine Beach. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 222 3rd Street is associated with early-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Vinyl Siding</u>		

Exterior Description: Leeds House is a two-story cross-gable residence with vinyl siding and an enclosed porch. The gables feature cornice returns and a single window. The building is two bays on the façade and three bays on the side elevations. The porch has a shed roof and a parged masonry knee wall or bulkhead. The primary entrance is in the left bay within the porch and is surmounted by a transom. The fenestration is 1/1 replacement sash.

Interior Description: N/A

Setting: Leeds House is in a residential area, two blocks from the beach and five blocks from a school. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: Leeds House is associated with late-nineteenth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The building at 205 2nd Street South is a one-and-one-half-story side-gabled bungalow. The main block has an overhanging half-story which forms a front porch with simple square posts. There is a shed roof dormer with paired 1/1 sash on the forward roof elevation. Within the porch, there is a left-bay entry and a four-part oriel window with casement sash. Projecting forward of the facade and engaged with the corner of the porch on the left side is a front-gabled projection that is two bays across with 1/1 replacement sash. On the opposite elevation, there is a two-tiered deck that is reached on the second story by a flight of steps. Access to both levels of the deck is via sliding patio doors. The siding is vinyl shingle on the facade and vinyl clapboard on the side elevations.

Interior Description: N/A

Setting: The building at 205 2nd Street South is in a primarily residential area, about one and a half blocks away from the oceanfront. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 205 2nd Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 205 2nd Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 205 2nd Street South is recommended Not Eligible for inclusion in the NRHP.

Builder:	N/A	Remaining Historic Fabric:	Low
Style:	None		
Form:	Gable Front	Stories:	1
Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 206 Vernon Place is a one-story front-gable house. The building is four bays across the facade with the rightmost bay extending beyond the gable front and occupying a single-bay side projection with a gabled roof. From left to right the bays are occupied by a picture window and the primary entrance, followed by 1/1 replacement sash. The entry is reached by an elevated concrete platform or deck with vinyl railings that extends from the entry all the way to the end of the facade on the left. There is a single 1/1 replacement sash in the gable above. The gable is clad in vertical vinyl siding while the entire first story is clad in vinyl clapboard. The building is two bays on the public-facing side elevation with 1/1 replacement sash. The foundation is paved.

Interior Description: N/A

Setting: The building at 206 Vernon Place is in a residential area about one block away from the beach and surrounded by similar residential housing. Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 206 Vernon Place is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 209 2nd Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 209 2nd Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 209 2nd Street South is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Asphalt Shingles		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The resource at 215 Vernon Place is a heavily altered circa 1950 two-and-a-half story dwelling measuring two bays wide and two bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl siding with synthetic painted wood shingles on the southwest (front) elevation. Fenestration consists of replacement vinyl sash 1/1 windows, some in pairs. The resource has a shed roof profile and a full-width second-story addition set atop an integral porch supported by square posts with a simple balustrade is attached to the southwest elevation. A second-story wood deck is attached to the northeast (rear) elevation.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 352 8th South Street is associated with late-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 352 8th South Street is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 352 8th South Street is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Vinyl Siding</u>		

Exterior Description: The resource at 234 5th Street South is a heavily altered, one-story minimal ranch dwelling measuring two bays wide and three bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl siding. The side gable roof is covered in asphalt shingle and the fenestration consists of replacement aluminum sash 1/1 windows and a slightly projecting bay window on the northeast (front) elevation. A partially enclosed one-story addition with a front gable roof is attached to the northeast elevation. The enclosed section of the addition is covered with applied stretcher bond brick. The open section functions as a porch and is supported by a square post that is also covered in stretcher bond brick.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 211 2nd Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 211 2nd Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 211 2nd Street South is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The resource is a heavily altered ca. 1953 two-story dwelling measuring three bays wide and three bays deep. The low-pitched side gable roof is covered in asphalt shingle and exterior material consists of replacement vinyl siding. The house rests on a concrete block foundation and fenestration consists of replacement 1/1 aluminum sash windows. An enclosed, partial-width one-story addition is attached to the northwest (front) elevation and covers the original entrance. The roof of the addition features a balcony with a simple balustrade which is accessible from an exterior stairway. An exterior door is located on the northwest elevation accessing the balcony. Another entrance has been added to the southwest (side) elevation and is covered by a full width, slightly overhanging hipped roof. The southwest elevation also includes a patio with a simple vinyl balustrade.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 206 W Beach Ave is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 236 7th Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 236 7th Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 236 7th Street South is recommended Not Eligible for inclusion in the NRHP.

Builder:	N/A	Remaining Historic Fabric:	Low
Style:	None		
Form:	Cape Cod	Stories:	1
Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Unknown		

Exterior Description: The resource is a heavily altered ca. 1960 one-and-a-half story Cape Cod dwelling measuring three bays wide and two bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl siding. The steeply pitched side gable roof is covered in asphalt shingle and is pierced by a large stucco-covered exterior chimney on the southeast (side) elevation. Fenestration consists of replacement vinyl sash 1/1 windows and a visor dormer window is located on the southwest (rear) elevation. A partial width one-story addition is attached to the northwest (side) elevation. At the time of survey, the house was undergoing renovations including the addition of two stepped projecting gables on the northeast (front) elevation and the removal of some siding materials.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 240 7th Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 206 Roosevelt Boulevard South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 206 Roosevelt Boulevard South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 206 Roosevelt Boulevard South is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The resource is an altered two-story ca. 1950 Shed style dwelling measuring two bays wide and three bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl siding. The roof consist of two, tiered shed roofs and fenestration consists of replacement vinyl sash 1/1 windows and fixed windows. The northeast (front) elevation includes a two-story porch with an upper balcony supported by square vinyl posts. Each story of the porch has a simple vinyl balustrade and the ground level has a sliding glass door entrance in addition to the front entrance.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 246 9th Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 234 6th Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 234 6th Street South is recommended Not Eligible for inclusion in the NRHP.

Exterior Finish Materials	<u>Aluminum Siding</u>		

Exterior Description: The resource is an altered one-story minimal Ranch dwelling measuring two bays wide and three bays deep. The house rests on a concrete block foundation and is covered in aluminum siding. The side gable roof is covered in asphalt shingle and fenestration consists of aluminum sash 1/1 window. A one-story shed roof addition is attached to the northeast (rear) elevation while a partial width one-story shed roof sun porch addition is attached to the southwest (front) elevation.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 247 6th Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The resource is a heavily altered, two-story ca. 1950 dwelling measuring three bays wide and two bays deep. Due to extensive alterations, the style or type of the house is not discernable. The house rests on a concrete block foundation and is covered in replacement vinyl siding. The broken gable roof is covered in asphalt shingle and is pierced by an exterior chimney covered in vinyl siding. Fenestration consists of replacement, vinyl sash 1/1 windows and tripartite picture windows on the northeast (front) elevation. A partially enclosed second story addition with two projecting shed roofs is attached to the northwest elevation. A partial width, offset porch with a simple wood balustrade is also located on the ground level of the northwest elevation. A one bay detached garage is located to the southwest (rear) of the house.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 211 Vernon Place is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 211 Vernon Place is recommended Not Eligible for inclusion in the NRHP.

Type:	N/A	Bays:	4
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The resource is an altered, two-story ca. 1950 dwelling with a rectangular footprint measuring four bays wide and two bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl siding. Fenestration consists of replacement vinyl sash 1/1 windows and the low-pitched side gable roof is covered in asphalt shingle. A partial width shed roof porch supported by simple square posts is located on the southwest (front) elevation while a second floor patio accessed by exterior stairs is located on the southeast (side) elevation.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 207 2ND Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 201 3rd Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 201 3rd Street South is recommended Not Eligible for inclusion in the NRHP.

Builder:	N/A	Remaining Historic Fabric:	Low
Style:	Colonial Revival		
Form:	Other	Stories:	2
Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl; Aluminum		

Exterior Description: The resource is an altered, two-story ca. 1955 Colonial Revival dwelling measuring three bays wide and three bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl and aluminum siding. The low-pitched side gable roof is covered in asphalt shingle and pierced by a centrally placed interior chimney. The southwest (front) elevation includes a full width pent roof covered in asphalt shingle. Fenestration consists of replacement aluminum sash 1/1 windows. The southwest (side) elevation features a second floor deck with a simple balustrade that gives access to an alternate entry. A simple concrete block pad is located on the southwest elevation.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 219 Vernon Place is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 214 Vernon Place is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 214 Vernon Place is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 214 Vernon Place is recommended Not Eligible for inclusion in the NRHP.

Form:	Row	Stories:	2
Type:	N/A	Bays:	2
Roof Finish Materials:	Unknown		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The resource is a heavily altered, two-story ca. 1930 residential unit measuring two bays wide and three bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl shake shingle and vinyl siding. The material covering the shed roof was not visible during field survey. Fenestration consists of replacement vinyl sash 1/1 windows with two vinyl sash tripartite windows with simulated panes on the northeast (front) elevation. An enclosed one-story shed roof porch is attached to the northeast elevation. The residence is one of nine rowhouse type units.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 200 3rd Street South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Vinyl Siding</u>		

Exterior Description: The resource is an altered one-and-a-half-story Cape Cod dwelling measuring three bays wide and two bays deep. The house rests on a concrete block foundation and is covered in replacement vinyl siding. The side gable roof is covered in asphalt shingle and includes a visor dormer on the southwest (front) elevation and a smaller shed roof dormer on the northeast (rear) elevation. The remaining fenestration consists of replacement vinyl sash 1/1 windows. A simple, partial width porch with a vinyl balustrade is attached to the southwest elevation.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 205 Vernon Place is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The resource is a heavily altered ca. 1959 one-and-a-half-story Cape Cod dwelling measuring three bays wide and one bay deep. At the time of survey, the house was undergoing renovations resulting in the removal of some of the exterior siding material. Existing siding material consists of replacement vinyl siding. The side gable roof is covered in asphalt shingle and has been modified by the addition of a second-story enclosed addition supported by wood posts on the northeast (rear) elevation. The roof also includes a visor dormer on the southwest (front) elevation. Fenestration consists of replacement vinyl sash 1/1 windows. A window on the second floor of the southwest elevation has been converted into a sliding glass door that previously gave access to an upper balcony (removed ca. 2021). A exterior wood staircase accessing the second floor is located on the southeast (side) elevation.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 203 2nd Street South is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 203 2nd Street South is recommended Not Eligible for inclusion in the NRHP.

Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Aluminum		

Exterior Description: The resource is an altered one-story ca. 1950 minimal Ranch dwelling measuring three bays wide and one bay deep. The house is covered in aluminum siding and rests on a concrete block foundation. Fenestration consists of replacement aluminum sash 1/1 windows and the side gable roof is covered in asphalt shingle. A one-bay, partial width addition is attached to the southeast (side) elevation and a partial width shed roof porch is attached to the northeast (front) elevation. The porch rests on a concrete block foundation and is supported by square posts with a solid wood frieze with swag detail below the roof line.

Interior Description: N/A

Setting: Brigantine is laid out in a rectilinear grid extending two-thirds of the island with curvilinear development on the northern extent of the city. The North Brigantine Natural Area on the northern limit of the island was added to New Jersey's Natural Area System in 1967 to preserve the salt marsh habitats, coastal dunes, and rare species habitats (HABS, 1991). Brigantine Avenue (CR 638) is the primary arterial, eventually connecting to the mainland via Atlantic City to the southwest.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The city of Brigantine is in the extreme southeastern extent of Atlantic County on Brigantine Island. The first Euro-American family to settle in Brigantine arrived in 1730 followed by more settlers in the 1760s. By 1805, there were seven houses and a boarding house on the island and by the mid-nineteenth century, the island had numerous hotels. In 1880, the Brigantine Land Company began platting land and selling lots. However, the most meaningful development period occurred in the early 1920s when the Island Development Company began developing residential and commercial properties on most of the island. The city was formally incorporated in 1924 and in 1926 the iconic (although nonfunctional) Brigantine Lighthouse was constructed by the company to attract residents to the island. The first bridge to Atlantic City was also built in 1924. Historic aerials show the first appearance of the street grid and the curvilinear streets to the north in 1931 with only scattered housing construction. In 1957, the grid is mostly filled out but the curvilinear section to the north and an undeveloped section on the southern tip of the island remain without housing. The island, except for the North Brigantine Natural Area, is almost completely built out by 1984. Beginning in the late 1980s, the residential housing stock in Brigantine began to see large-scale demolition of historic-era housing in favor of more modern, often two-to-three-story houses. This is particularly evident along the coastline, as many historic-era homes have been destroyed by hurricane effects. However, in the interior of the Brigantine's residential core, many homeowners have opted to demolish and rebuild rather than restore or rehabilitate historic-era properties. Brigantine is still a very popular vacation destination, offering a more family-friendly atmosphere compared to Atlantic City to the southwest (HABS, 1991; NETR, 2023).

Significance: 212 Roosevelt Boulevard South is associated with mid-twentieth-century development in Brigantine City. The building is not representative of a significant architectural style or type and is not architecturally significant.
