History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 740 SEWELL AVE is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 740 SEWELL AVE is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 740 SEWELL AVE is recommended Not Eligible for inclusion in the NRHP.

Exterior Finish Materials Aluminum Siding

Exterior Description: The resource at 555 North Maryland Avenue is a four-story building with a three-story aluminum-clad tower atop a five-bay CMU garage. The first story features three garage doors flanked by pedestrian doors. Engaged wood columns between bays support a pent roof between the first and second stories. Stone lions rest atop the corners of the story where they extend beyond the upper stories. The tower above is two bays wide and one bay deep with single-pane fixed sash. The corners of the façade are curved with metal sheeting. Applied decorative fans are atop the fenestration on the façade.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 700 North Virginia Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Finish Materials	Vinyl Siding		

Exterior Description: The resource at 510 N. South Carolina Avenue is a garden-type apartment complex. Apartment blocks are rectangular with a flat roof, set atop a high basement with vinyl siding. Each block is three stories with fenestration on the long elevation and devoid of openings on the short elevations. Entry elevations are slightly recessed with regular fenestration of 1/1 sash grouped in ones, twos, and threes. The entry into each block is in the center bay with a shed-roof overhang supported by angled piers. Each entry is half-glazed and is flanked by sidelights.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 501 N SOUTH CAROLINA AVE is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The building at 725 North Doctor Martin Luther King Boulevard is a two-story split-level house with a full-height recessed entrance in the center bay. The fenestration consists primarily of 1/1, double-hung vinyl windows. The first story is clad in Formstone and features a garage door at the south bay, and a pair of windows at the north bay flanked by vinyl shutters. The second story features one Chicago-style window in the north bay and two windows on the south bay. The side elevations are mostly blank except for cornice returns. A secondary entrance on the rear is flanked by windows on the first story, and the second story has four window bays. The gabled roof is clad in asphalt shingles and a concrete block chimney rises from the northeast slope.

BUILDING ATTACHMENT

Historic Sites #:

Common Name:	736 N DR MARTIN LUTHER KING BLVD		
Historic Name:	N/A		
Present Use:	Residential Activity, Permanent		
Historic Use:	Residential Activity, Permanent		
Construction Date:	1962	Source:	njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Good
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	None		
Form:	Split-level	Stories:	2
Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt		
Exterior Finish Materials	Vinyl		

Exterior Description: The building located at 736 North Doctor Martin Luther King Boulevard is a two-story split-level house on a concrete foundation. The fenestration consists primarily of 1/1, double-hung vinyl windows. The first story is clad in Formstone and features a garage door at the north bay, and a pair of windows at the south bay covered by bars and flanked by vinyl shutters. The second story features a row of five casement windows in the south bay and two windows on the north bay. The side elevations have two bays on each story. A secondary entrance on the rear is flanked by windows on the first story, and the second story has four window bays. The gabled roof is clad in asphalt shingles and a concrete block chimney rises from the southwest slope.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 736 N DR MARTIN LUTHER KING BLVD is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 736 N DR MARTIN LUTHER KING BLVD is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 736 N DR MARTIN LUTHER KING BLVD is recommended Not Eligible for inclusion in the NRHP.

Common Name:	1600 ABSECON BLVD		
Historic Name:	N/A		
Present Use:	Residential Activity, Transient, nonfamily		
Historic Use:	Residential Activity, Transient, nonfamily		
Construction Date:	1950	Source:	njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Good
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	Other		
Form:	Other	Stories:	1
Type:	N/A	Bays:	N/A
Roof Finish Materials:	Asphalt shingle		
Exterior Finish Materials	Stucco		

Exterior Description: The building at 1600 Absecon Boulevard is a set of units for a motel. The units are single-story, clad in stucco, and capped with an asphalt shingle roof. The units are arranged in an ell shape. Each unit holds a door with a row of door lights in the top panel. Adjacent to the entrance, two, six pane windows are set into the bay flanked by shutters.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

Survey Name:	Atlantic Shores Offshore Wind – Wind Turbine Area - Aboveground Historic Properties Survey	Date:	February 28, 2023

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 1600 ABSECON BLVD is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 1600 ABSECON BLVD is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 1600 ABSECON BLVD is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 1300 North Indiana Avenue is a one-and-one-half-story house on a concrete foundation. The (northeast) façade consists of a one-story attached garage with an overhead door, and a Roman brick-veneered bay with a Chicago-style window and a recessed entrance. The door opens onto a shallow concrete patio and features one sidelight. The façade bay is surmounted by a shallow, flat gable. The remaining fenestration consists of 1/1, double-hung vinyl windows. There is a secondary entrance from a grade-level patio on the southeast elevation located on the first story along with a Chicago-style window beneath a pent roof. The southwest elevation features a split-level second-story overhang and two asymmetrical window bays on each story. The saltbox-style roof slopes downward to the façade.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 912 Indiana Avenue is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 912 Indiana Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 912 Indiana Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials: Asphalt shingle

Exterior Finish Materials Stucco

Exterior Description: The building at 910 North Indiana Avenue is a single-story, two-bay building. The building is clad in stucco with partial brick masonry and capped in an asphalt shingle roof. The primary façade is sheltered by the roof overhang. The entrance is held in the left bay. In the right bay a 1/1 window is centered in the bay above the brick masonry.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

The building at 1142 North Indiana Avenue was constructed circa 1951 in a part of Atlantic City that developed primarily during the mid-twentieth-century (NETR, 2023).

Significance: 1142 North Indiana Avenue is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 1142 North Indiana Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 1142 North Indiana Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Stucco		

Exterior Description: The building at 161 Marmora Avenue is a two-story stucco clad Four Square type residence with a pyramidal roof sheathed in asphalt shingle. The house has a square footprint with a small, single-story rear addition. The primary (north) elevation is symmetrically arranged with a centered door flanked by paired windows on the first floor, and paired windows in the outer bays on the second floor. Windows are generally one-over-one vinyl sash. The single-story entry porch has a metal canopy supported on wrought iron columns.

Interior Description: N/A

Setting: The resource occupies a mid-block lot in a residential neighborhood characterized by detached and row houses of the twentieth century. During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

The group of rowhouses including 1011 North Ohio Avenue was constructed between 1920 and 1930 in what was, at the time, the northern edge of residential development in Atlantic City. The remainder of the immediate neighborhood was largely built out by the early post-World War II period. Much of the neighborhood has been redeveloped in recent years (NETR, 2023).

Significance: 1011 North Ohio Avenue is associated with early-twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Type:	N/A	Bays:	2
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Asbestos Siding		

Exterior Description: The building at 912 Stenton Place is a two-story American Foursquare constructed in 1924 and located four houses from the beach. The house rests on a brick foundation, is clad in asbestos siding and is capped by a hip roof covered in asphalt shingles. The façade faces northeast and exhibits a full-width front porch with a hipped roof supported by square posts sheltering a central entrance flanked by windows. Fenestration consists of 6/1 windows, with paired windows on the side elevations.

Interior Description: N/A

Setting: The building at 912 Stenton Place is located in a densely populated beachside community in Ocean City, within the first block from the beach. The lots are long and narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The building at 912 Stenton Place is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The building at 826 North Street is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Wood, Flush</u>		

Exterior Description: The Harris House Motor Inn is a two-story motel constructed circa 1970 and located within the first block from the beach. The motel is L-shaped and clad in diagonal board siding and is capped by a flat roof with a pent roof covered in asphalt shingles running the perimeter of the building. The lobby is located off of Ocean Avenue and consists of metal framed plate glass. The second story of the motel extends south from the lobby on raised piers providing a carport for arriving guests and sheltered parking. Individual rooms are delineated by a solid panel door and large metal-framed plate glass windows. A metal railing runs the perimeter of the second floor, and an inground pool is located within the courtyard.

Interior Description: N/A

Setting: The Harris House Motor Inn is located adjacent to the boardwalk in Ocean City in an area consisting of commercial buildings and other motels. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

Exterior Description: The Franconia Apartments is a two-and-a-half-story Craftsman residence constructed in 1920 and located a block from the beach. The building rests on a raised brick foundation, is clad in wood shingles and is capped by a front-gable roof covered in asphalt shingles. The roof features a front-gable dormer on both side elevations. The façade faces southeast towards Ocean Avenue and exhibits a full-width, shed-roof front porch with a gable-front pediment supported by decorative wood square posts and carved brackets. The porch is accessed by a set of paired concrete steps with metal railings and shelters a central entrance featuring a rectangular transom and side lights. The brick foundation of the porch does not appear to be original, and seems to now contain living space, featuring an eight-paned fixed window under the steps and two other windows on the sides. The central door is flanked by multi-paned French doors, also with rectangular transoms. The second story of the façade features two oriel windows with 12/1 windows, and the attic half-story features a ribbon window with 1/1 windows. Fenestration throughout the rest of the building appears to consist of 1/1 windows. The building features elaborately carved brackets within the eaves, and an interior brick chimney is located on the northeast side elevation.

Interior Description: N/A

Setting: The Franconia Apartments are located in a densely populated beachside community in Ocean City, a block from the beach. The building faces towards the beach and looks across Ocean Avenue towards motels and large-scale apartment buildings. The lot that the building is sited in is long and narrow, and the constructed close to adjacent buildings. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. This building is located within this area. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. Setting: The building at 830 North Street is located in a densely populated beachside community in Ocean City, three blocks from the beach. The lots are long and narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. This building is located within this area. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. This building is facing that development. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The building at 830 North Street is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 830 North Street is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 830 North Street is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The Gardens Plaza is a thirteen-story condominium constructed in 1973 and located adjacent to the boardwalk overlooking the ocean. The building is clad in stucco and is capped by a flat roof. The façade faces south towards the ocean and exhibits cantilevered balconies with vinyl railings for each unit flanked by vinyl hopper windows. The ground floor of the building features inset bays for parking.

Interior Description: N/A

Setting: The Gardens Plaza is located adjacent to the boardwalk with direct beach access. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The Gardens Plaza is associated with mid-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, the Gardens Plaza is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, the Gardens Plaza is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 1304-08 Ocean Avenue is a two-story Spanish Colonial Revival house constructed in 1957 and located a block from the beach. The house is clad in stucco and is capped by a hip-on-hip roof covered in asphalt shingles. The façade faces southeast towards Ocean Avenue and the beach and exhibits a front porch topped by a balcony in the westernmost bay, a projecting bay in the center, and a secondary entrance with a broken pediment surround in the easternmost bay under a shed roof. A circular window is located under the secondary entrance, a picture window flanked by 1/1 windows is located on the central projection, and the porch and balcony feature a single 1/1 window. Fenestration throughout consists of 1/1 vinyl windows, with some paired windows on the side elevations.

Interior Description: N/A

Setting: The building at 1304-08 Ocean Avenue is located in a commercial beachside community geared towards the tourist industry, a block from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Exterior Description: The building at 908 Park Place is a two-story cross-gable house constructed in 1928 and extensively remodeled in 2010. The house is located four houses from the beach, rests on a raised foundation, is clad in wood siding and the roof is covered in asphalt shingles. The façade faces northeast and exhibits a two-story, full-width front porch capped by a hipped roof supported by square posts. The front facing gable extends above the hip roof of the porch. This house was extensively remodeled ca. 2010, when it appears the house was raised, the porches renovated, and the rooflines altered.

Interior Description: N/A

Setting: The building at 908 Park Place is located in a densely populated beachside community in Ocean City, four houses from the beach and across the street from a high-rise condominium. The residential lots are long and narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Roof Finish Materials:	<u>Unknown</u>		
Exterior Finish Materials	<u>Stone, Ashlar</u>		

Exterior Description: The Days Inn/Ocean 7 is a four-story L-shaped hotel constructed in 1972 and located within the first block from the beach. The building is clad in stucco and stone, is capped by a flat roof, and exhibits a decorative tile façade with wave and circular motifs above the lobby. The lobby is inset with hotel units above supported by stone-clad columns, creating a car port for arriving guests. Decorative metal railings, with circular cut-out motifs run along the upper floors and stairwells. Fenestration consists of fixed and sliding windows.

Interior Description: N/A

Setting: The Days Inn/Ocean 7 is located in a beachside commercial area adjacent to the boardwalk within the first block from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The Days Inn/Ocean 7 is associated with mid-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, the Days Inn/Ocean 7 is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, the Days Inn/Ocean 7 is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 872 North Street is a three-story vernacular residence constructed in 1948 and located in the second block from the beach. The house is clad in vinyl siding and is capped by a gable-front roof covered in asphalt shingles and appears to have been extensively altered. The façade faces northeast and exhibits a projecting two-story, gable-front bay adjacent to a two-story porch, topped by a third-story balcony. A second-story balcony extending from the second-story porch has recently been added to the house. An inset porch under a third-floor shed-roof extension is located on the side elevation facing the ocean. This elevation also features a set of stairs leading to a second-floor side entrance. full-width front porch with a hipped roof supported by square posts sheltering a central entrance flanked by windows. Fenestration primarily consists of 1/1 vinyl replacement windows.

Interior Description: N/A

Setting: The building at 872 North Street is located in a densely populated beachside community in Ocean City, within the first block from the beach. The lots are long and narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. Exterior Description: The building at 1122 Ocean Avenue is a two-story vernacular residence constructed in 1902 and located a block from the beach. The house rests on a raised foundation, is clad in vinyl siding and is capped by a cross-gable roof covered in asphalt shingles. The façade faces southeast and exhibits a full-width front porch on the first floor, and a slightly smaller second-story porch under a front-gable extension that features scalloped vinyl siding and a fixed four-pane window. The porch roofs are supported by Doric columns resting on vinyl-sided bases, and vinyl railings run the perimeter. A set of paired steps access the first-floor porch and also exhibit vinyl railings. The house appears to have recently been renovated. The second story features multi-paned sliding glass doors flanked by 6/6 vinyl windows. Fenestration on the side elevations also feature 6/6 vinyl windows. .

Interior Description: N/A

Setting: The building at 1122 Ocean Avenue is located in a beachside community in Ocean City consisting mostly of commercial buildings catering to the tourist industry, within the first block from the beach. The lots are long and narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. Exterior Description: 921 5th to Boardwalk is a two-story, raised, Shed-style condominium/apartment building constructed in 1979 and located adjacent to the boardwalk. The irregular-shaped building is clad stucco and is capped by shed roofs in complex arrangements that are covered in asphalt shingles. Fenestration consists of single-pane vinyl windows in single, triple, and quadruple arrangements. Each unit appears to have its own balcony exhibiting sliding-glass doors with transoms and vinyl railings

Interior Description: N/A

Setting: 921 5th to Boardwalk is located adjacent to the boardwalk with direct access to the beach in a densely populated beachside community consisting of both residential and commercial buildings in Ocean City. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: 921 5th to Boardwalk is associated with mid-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 921 5th to Boardwalk is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 921 5th to Boardwalk is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 608 Chelsea Place is a one-and-a-half-story Craftsman-style bungalow constructed circa 1925 and located within the first block from the beach. The house rests on a raised foundation, clad in stone, that does not appear to be original. A one-bay carport and garage is located within this raised foundation. The building is clad in wood shingle siding and is capped by a hip roof covered in asphalt shingles. The roof features wide overhanging eaves. The façade faces northeast and exhibits a full-width front porch created by the overhanging hip roof that is supported by slender square columns. A set of stairs from the ground level leads to the front porch. These elements do not appear original to the house. A hip-roof dormer is located above the porch. The porch shelters a central entrance flanked by windows with decorative wood surrounds. Fenestration consists of 1/1 vinyl-sash replacement windows.

Interior Description: N/A

Setting: The building at 608 Chelsea Place is located in a densely populated beachside community in Ocean City, within the first block from the beach. The lots are long and narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Exterior Description: The building at 904 North Street is a one-and-a-half-story Colonial Revival residence constructed in 1920 and located four houses from the beach. The house rests on a brick foundation, is clad in vinyl siding and is capped by a front-gable roof covered in asphalt shingles. The façade faces northeast and exhibits a full-width front porch with a hipped roof topped by a balcony and supported by brick columns. The porch and balcony feature a vinyl railing and large awnings that obscure most of the façade. An exterior chimney, clad in stucco, is located within the center of the façade. Two lunette windows flank the chimney in the gable-front eave. Fenestration consists of 1/1 vinyl replacement windows, and paired windows on the side elevations. The southwest elevation features a small one-bay garage towards the rear of the house and a set of steps lead to a secondary entrance.

Style:	None		
Form:	Four Square	Stories:	2
Type:	N/A	Bays:	2
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Wood, Shingle		

Exterior Description: The building at 906 North Street is a two-story vernacular residence constructed in 1920 and located two houses from the beach. The house rests on a brick foundation, is clad in wood shingle siding and is capped by a hip roof covered in asphalt shingles. The façade faces northeast and exhibits a full-width front porch with a hipped roof supported by brick posts and topped by a balcony. Vinyl railings are located on the porch and balcony. The porch shelters a central double-door entrance flanked by 1/1 windows. The second floor features two doors exiting onto the balcony and each door is flanked by a 1/1 window. Fenestration on the side elevations consists of 1/1 windows. A small, one-bay garage is appended to the southeast elevation, near the rear of the house. This house has undergone recent renovations and features new wood shingle siding, porch elements, roofing materials and replacement windows.

Interior Description: N/A

Setting: The building at 906 North Street is located in a densely populated beachside community in Ocean City, two houses from the beach. The lots are long and narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The building at 906 North Street is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 906 North Street is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 906 North Street is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Asphalt		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 20 Gardens Road is a two-story vernacular residence constructed in 1915 and located two blocks from the beach. The house rests on a raised brick foundation, is clad in vinyl siding and is capped by a hip roof covered in asphalt shingles. The façade faces south and exhibits a full-width, three-tier, inset front porch. This porch rests on a brick foundation and is supported by brick columns on the ground level where it shelters the main entrance to living space within the raised basement level. A set of vinyl steps and railings lead to the first-floor porch, and square columns covered in vinyl siding and Doric columns support the third tier of the porch, which is enclosed on the second floor. The main entrance is centered and flanked by 1/1 vinyl windows. The façade features a hip-roof dormer set with three fixed vinyl windows. A two-story bay window is located on the west elevation, and an exterior brick chimney is located on the east elevation. The east elevation also features a hip-roof dormer featuring a small ribbon window with fixed vinyl windows. This house has undergone recent renovations and features new vinyl siding, modern porch elements, and replacement windows.

Interior Description: N/A

Setting: The building at 20 Gardens Road is located in a densely populated beachside community in Ocean City, two blocks from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street is located, was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The building at 20 Gardens Road is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 20 Gardens Road is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 20 Gardens Road is recommended Not Eligible for inclusion in the NRHP.

Style:	None		
Form:	Bungalow	Stories:	1
Type:	N/A	Bays:	2
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Wood, Shingles		

Exterior Description: The building at 828 North Street is a one-story vernacular residence constructed in 1930 and located three blocks from the beach. The house is clad in wood shingle siding and is capped by a front-gable roof covered in asphalt shingles. The façade faces northeast and features an enclosed half-width front porch under a front-gable roof extension. Fenestration consists of 1/1 windows.

Interior Description: N/A

Setting: The building at 828 North Street is located in a densely populated beachside community in Ocean City, three blocks from the beach. The lots are narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The building at 828 North Street is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 828 North Street is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 828 North Street is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 66 Gardens Road is a raised one-and-one-half-story vernacular residence constructed in 1935 and located one block from the beach. The irregularly shaped house is clad in vinyl shingle siding and is capped by a gable-on-hip roof covered in asphalt shingles. A wrap-around porch is located on the main floor, and also provides shelter to the living space on the ground level. The main floor of the porch is accessed by a set of vinyl stairs centered on the façade, is supported by square vinyl-shingle sided columns at the ground level, and square posts on the main level. The porch extends to the rear of the house and flows into a balcony. Vinyl railings run the perimeter of the porch and balcony. The gable-front on the façade features a vinyl-sash Palladian window. This house has been extensively remodeled and no longer conveys historic integrity.

Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 46 Gardens Road is a three-story vernacular residence constructed in 1921 and located two blocks from the beach. The house is clad in vinyl siding and is capped by a low-pitch hip roof covered in asphalt shingles. The façade faces south and features a full-width, two-story porch with the third story of the house extending over it. The ground-level porch features a short wing wall around the perimeter, while the second-story porch features vinyl railings. The overhanging third story is supported by square columns. Stairs are located on the west (side) elevation that lead to the second-story porch. The façade on the first and second stories mirror each other and consist of a centered door flanked on the west by a ribbon window and on the east by a large 1/1 window. The third-story façade features a centered paired 1/1 window. The side elevations feature pent roofs between the second and third stories, and may be evidence of a third-story addition. The east elevation features single, and three-part ribbon windows on the first and second story, and a single-story balcony extends off the elevation at the rear of the house. The third-story features three paired windows and a single window towards the rear of the house. The west elevation features a slight second-story extension, and asymmetrical window placements consisting of single and paired windows. Fenestration consists of 1/1 vinyl windows flanked by faux shutters.

Interior Description: N/A

Setting: The building at 46 Gardens Road is located in a densely populated beachside community in Ocean City, a block from the beach. The lots are long and narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Exterior Description: The building located at 44 Gardens Road is a two-and-a-half-story Colonial Revival Residence constructed in 1930. The building is set on a raised foundation, is clad in wood shingle siding, and is capped by hip roof. The façade faces south and features a two-story porch capped by the hipped roof overhang. Staires centered on façade lead to the main floor of the porch, that features square columns clad in wood shingles, and wood-shingled wing walls. The second-story porch features wood railings and the hip roof is supported by three slender chamfered wood columns on the corners and single post in the center. The porch also shelters an entrance at the ground level. A hip roof dormer with a three-part ribbon window is also present on the façade. The west elevation features a two-story bay window, and a garage bay is located within the raised foundation. The west elevation features an exterior brick chimney with corbelling, and a second-story extended window bay. Fenestration consists of 1/1 windows in single, paired, and three-part window configurations. Two sliding-glass doors provide access to the second-story porch.

Setting: The building at 30 Gardens Road is located in a densely populated beachside community in Ocean City, two blocks from the beach. The lots are long and narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The building at 30 Gardens Road is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The building at 28 Gardens Road is a one-and-a-half-story residence constructed in 1943 two blocks from the beach. The house is resting on a raised foundation, is clad in vinyl siding, and is capped by a hipped roof covered in asphalt shingles. The façade features a full-width front porch accessed by an offset set of stairs. The raised foundation contains living space and has been built out under the porch where the main entrance to the ground-level living space is located. The house features hip-roof dormers with sliding vinyl sash windows.

Interior Description: N/A

Setting: The building at 28 Gardens Road is located in a densely populated beachside community in Ocean City, two blocks from the beach. The lots are narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

Exterior Description: The building at 2321 Wesley Avenue is a two-story residence constructed in 1951 and located on the beach. The house is clad in faux-stone veneer and is capped by a flat roof. The façade faces the ocean and appears to have an elevated balcony with round metal railing. The rear of the house faces Wesley Avenue and features a garage with living space above. Fenestration consists of single, paired, and tri-partite ribbon window with what appears to be fixed sash above and hopper windows below. It appears that a breezeway connects the main block of the house to the garage, with an open balcony with round metal railings on the second story. .

Interior Description: N/A

Setting: The building at 2321 Wesley Avenue is located in a densely populated beachside community in Ocean City, with direct access to the beach. The lots are long and narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The building at 2321 Wesley Avenue is associated with mid-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 2321 Wesley Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 2321 Wesley Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Wood, Shingle</u>		

Exterior Description: The building at 233 Beach Road is a one-and-a-half-story residence constructed in 1963 and located on the beach. The house rests on a brick pier foundation, is clad in wood shingle siding and is capped by a gable-front roof covered in asphalt shingles. The façade faces southeast towards the ocean and appears to exhibit a full-width deck. The building is slightly flared above the brick pier foundation. Fenestration consists of 6/1 vinyl windows with wood surrounds. A large interior brick chimney with corbelling is located near the front of the house on the southern elevation, and a shed-roof stoop shelters a side entrance on the same elevation. This house is one of two identical houses constructed next to each other and share a courtyard.

Interior Description: N/A

Setting: The building at 233 Beach Road is located directly on the beach in an area that is sparsely developed along the ocean. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The building at 233 Beach Road is associated with mid-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 233 Beach Road is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 233 Beach Road is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 200 East Atlantic Avenue is a two-and-a-half-story residence constructed in 1931 and located one block from the beach. The house rests on a raised brick foundation, is clad in wood shingle siding and is capped by a hip roof covered in asphalt shingles. The façade faces west and exhibits a wrap-around front porch with a hipped roof supported by brick columns and Doric columns. There is a slight hip-roof extension on the façade supported by paired Doric columns. The porch is accessed by a staircase with wood railings, and the façade railing exhibits a decorative sunburst motif. The main entrance is centered and features sidelights and entablature. Fenestration consists of 6/1 windows, with paired windows on the façade, and a ribbon window on the south elevation. A set of stairs provides access to a side porch and secondary entrance on the north elevation. The house features hip-roof dormers with paired six-pane fixed windows.

Interior Description: N/A

Setting: The building at 200 East Atlantic Avenue is located in a densely populated beachside community in Ocean City, within the first block from the beach, on a corner lot. The lots are long and narrow, and the residences are constructed close to each other. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. BUILDING ATTACHMENT

Historic Sites #:

Common Name:	164 E Atlantic Boulevard		
Historic Name:	N/A		
Present Use:	Residential Activity, permanent		
Historic Use:	Residential Activity, Permanent		
Construction Date:	1910	Source:	Njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Good
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	Colonial Revival		
Form:	Gable Front	Stories:	2.5
Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt shingle		
Exterior Finish Materials	Vinyl, Shingle		

Exterior Description: The resource is an altered two-and-a-half-story ca. 1910 Colonial Revival dwelling measuring three bays wide and four bays deep. The foundation is covered in stretcher bond brick and exterior material consists of vinyl shake shingle. The house is capped by a jerkin head roof covered in asphalt shingle and is pierced by an exterior brick chimney on the west (side) elevation. A hipped roof dormer window is located on the east (side) elevation. Fenestration consists of replacement vinyl sash windows with simulated 6/1 panes and two large tripartite picture windows on the south (front) elevation. The south elevation also includes a second-story overhang covering a porch resting on brick piers and supported by paired square posts and a simple balustrade. The porch wraps around to the east (side) elevation where it is covered by a low-pitched hipped roof. A historic-era three-bay garage capped by a steeply-pitched hipped roof covered in asphalt shingle is located to the northwest of the dwelling.

Interior Description: N/A

Setting: The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: 164 E Atlantic Boulevard is an altered example of early twentieth century Revival styles in Ocean City. Due to removal of historic materials, alterations to the original porch, alterations to original window openings, and non-historic additions, the house has undergone a loss of integrity and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 164 E Atlantic Boulevard is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 164 E Atlantic Boulevard is recommended Not Eligible for inclusion in the NRHP.

BUILDING ATTACHMENT

Historic Sites #:

Common Name:	344 East Surf Road		
Historic Name:	N/A		
Present Use:	Residential Activity, Permanent		
Historic Use:	Residential Activity, Permanent		
Construction Date:	1942	Source:	Njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Good
Builder:	N/A	Remaining Historic Fabric:	Medium
Style:	Dutch Colonial Revival		
Form:	Other	Stories:	2
Type:	N/A	Bays:	4
Roof Finish Materials:	Shingle		
Exterior Finish Materials	Stucco		

Exterior Description: The resource is an altered, two-story ca. 1942 Dutch Colonial Revival dwelling measuring four bays wide and two bays deep. Foundation material was not visible during field survey and the house is covered in stucco. The gambrel roof is covered in asphalt shingle and includes visor dormers on the east (front) and west (rear) elevations. The roof is pierced by an exterior brick chimney on the south (side) elevation. Fenestration consists of replacement vinyl sash windows with simulated 6/6 panes and quarter arch windows in the gable ends. A full width one-story sun porch addition with a second-floor balcony is attached to the south elevation. An integral porch supported by square posts with metal railing is located on the east elevation. A historic-era one-bay garage capped by a gambrel roof is located to the northeast of the dwelling.

Interior Description: N/A

Setting: The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: 344 East Surf Road is an altered revival style residence that has undergone alterations including the removal of historic materials, replacement windows and alterations to original window openings. Further, the house is a common and unexceptional example of the Dutch Colonial Revival style. As result, the resource lacks the integrity and significance necessary for inclusion on the National Register.

Eligibility for New Jersey

and National Registers: ☐ Yes ☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 344 East Surf Road is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 344 East Surf Road is recommended Not Eligible for inclusion in the NRHP.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 360 East Surf Road is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 360 East Surf Road is recommended Not Eligible for inclusion in the NRHP.

Historic Use:	Residential Activity, Permanent		
Construction Date:	1932	Source:	Njtaxrecords.net
Alteration Date(s):	N/A	Source:	N/A
Designer:	N/A	Physical Condition:	Good
Builder:	N/A	Remaining Historic Fabric:	Low
Style:	Colonial Revival		
Form:	Center Hall	Stories:	2.5
Type:	N/A	Bays:	5
Roof Finish Materials:	Asphalt shingle		
Exterior Finish Materials	Vinyl shingle		

Exterior Description: The resource is a heavily altered two-and-a-half-story ca. 1932 Colonial Revival dwelling measuring five bays wide and one bay deep. Foundation material was not visible during field survey and exterior material consists of replacement vinyl shake shingle siding. The side gable roof is covered in asphalt shingle and includes a gambrel roof dormer window on the southwest (side) elevation and a gambrel roof dormer window with gable returns on the northwest (side) elevation. The southeast (front) elevation includes an overhanging second story hipped pent roof covered in asphalt shingle. The pent roof covers an enclosed addition with a central entrance covered by a projecting gable set atop simple columns. The central entrance is adorned with side lights and a simple transom. Lateral one-story, hipped roof additions with upper balconies decorated with simple vinyl balustrades and supported by square columns are attached to the northwest and southeast (side) elevations.

Interior Description: N/A

Setting: The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: 19 Beach Road is a heavily altered residence that has undergone extensive alterations and additions that have compromised its ability to convey its historic character and appearance. Due to the significant loss of integrity, the resource is not eligible for inclusion in the National Register.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 29 Gardens Road is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 29 Gardens Road is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials: Asphalt shingle

Exterior Finish Materials Stone

Exterior Description: The building at 2908-2910 Wesley Avenue is a three-story residence constructed in 1961 and located on the beach. The house is clad in stone veneer and is capped by a front-gable roof covered in asphalt shingles. The façade faces southeast towards the ocean and exhibits an offset, inset, two-story porch and a shed roof dormer on the southern elevation creating the third story. Fenestration consists of 1/1 and fixed picture windows.

Interior Description: N/A

Setting: The building at 2908-2910 Wesley Avenue is located in a densely populated beachside community in Ocean City, within direct beach. The lots are long and narrow, and the residences are constructed close to each other. This house is surrounded by a wooden fence and the adjacent lot is vacant and incorporated into this resource's parcel. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The building at 2908-2910 Wesley Avenue is associated with mid-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The building at 22 Beach Road is associated with mid-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Historic Sites #:

Common Name: 15 Gardens Road	
Historic Name: N/A	
Present Use: Residential Activity, Permanent	
Historic Use: Residential Activity, Permanent	
Construction Date: 1940	Source: Njtaxrecords.net
Alteration Date(s): N/A	Source: N/A
Designer: N/A	Physical Condition: Fair
Builder: N/A	Remaining Historic Fabric: Low
Style: Colonial Revival	
Form: Gable Front	Stories: 2
Type: N/A	Bays: 3
Roof Finish Materials: Asphalt Shingle	
Exterior Finish Materials: Wood, Shingles and Asbestos Siding	

Exterior Description: The property at 15 Gardens Road is a two-story, one-up, one-down style duplex featuring a full-width two-story porch. The house rests on a brick foundation and is clad in asbestos shingles on the first story and wood shingles on the second story and gable end. The (north) façade is three bays wide on each story, consisting of a central entrance flanked by different types of windows; a 3/1, double-hung sash to the east and a pair of square casement windows to the west, all set in wide wood surrounds. The side elevations feature primarily 1/1, double-hung windows. The first story of the east elevation has five bays, and the second story features three plus a three-bay oriel window with 3/1, double-hung sashes. The west elevation features pairs of 1/1, double-hung sashes. The two-story façade porch is supported by robust square brick pillars that transition to wood at the second story to the roof above. A wood staircase with vinyl railings leads to the second story. Both stories of the porch have vinyl railings. The roof line is characterized by wide eaves, exposed joists, and a cantilevered gable end over the second-story porch. The gable has a pair of three-light casement windows in a square wood surround. The roof is clad in asphalt shingles.

Interior Description: N/A

Setting: The building at 15 Gardens Road is located in a residential area three blocks from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 15 Gardens Road is located in an early-twentieth-century development which included the in-filling of a saltwater pond and the extension of the peninsula into Egg Harbor. Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Allaback and Milliken, 1995; Ocean City, 2022).

Significance: The building at 15 Gardens Road is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The building at 1 Gardens Road is a two-story house on a concrete block foundation. The house has a rectangular plan and is situated on a corner lot at a slightly oblique angle to the other houses on the block. The building is clad in wood shingles and features an asymmetrical fenestration pattern, consisting of 1/1, double-hung windows alone or in pairs in simple vinyl surrounds. Most of the windows have vinyl shutters. At the east elevation is a brick chimney which runs from grade and extends beyond the roofline. A door to the south of the chimney opens onto a concrete patio with a metal railing. A two-story extension to the north features a first-story garage bay. The west elevation features a first-story entrance and a second-story porch with vinyl-clad supports and railings covered by a cantilevered gable end. The low-slung gable roof is clad in asphalt shingles.

Interior Description: N/A

Setting: The building at 1 Gardens Road is located in a residential area three blocks from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 1 Gardens Road is located in an early-twentieth-century development which included the in-filling of a saltwater pond and the extension of the peninsula into Egg Harbor. Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Allaback and Milliken, 1995; Ocean City, 2022).

Significance: The building at 1 Gardens Road is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The building at the building at 8 Gardens Road is a one-and-one-half-story Craftsman-style house resting on a brick foundation. The first story is clad in stucco and the upper half-story in vinyl siding. The fenestration is primarily 1/1, double-hung windows. One the (south) façade, a one-bay projection on the first story features a group of three windows flanked by vinyl shutters. An arched doorway with decorative brick accenting opens onto a brick patio and is covered by a gabled portico roof partially engaged with the roof of the projections. The patio features a metal railing. The west elevation features a three-sided bay window. The façade's upper half-story features a pair of windows and vinyl shutters. The side elevations at this level each have flat, shed-roof dormers. The roof is clad in asphalt shingles.

Exterior Description: The property at 79 Morningside Road is a two-and-one-half-story Shingle-style house in a gable ell form clad in wood shingles and resting on a brick foundation. The (north) façade of the first story features a covered breezeway supported by square red brick piers. Within the breezeway is an entrance flanked by rectangular sidelights with diamond-patterned muntins. To the west is a set of garage doors, and to the east are a pair of small 4/1, double-hung windows. A sunroom to the east features three large, six-paned windows in a wood surround. On the east elevation is a low-arched window featuring a band of six-paned windows. The second story features a porch atop the breezeway with wood railings and paneled posts. The second story façade features three bays of doors; two sliding doors with diamond lights and a hinged door with square multi-pane sidelights. The porch is covered by a shingle-clad hipped pent roof supported by pairs of wood paneled piers and features wide eaves with exposed joists. To the east on the ell volume is a set of sliding doors flanked by full-height sidelights, all with diamond lights. The east elevation of the second story features a wide oriel window featuring a band of 6/1, double-hung windows, wood paneling, and a pent roof. The upper-hand story features a patio above the second-story porch, accessed by two sliding doors, two shed-roof dormers engaged at the inside corner of the ell, a balcony accessed by sliding doors, and a blank circular medallion. The gable end on the east elevation has a row of four 4/1, double-hung windows. The building terminates in a gambrel roof clad in wood shingles. A one-story detached garage features similar materials, and window and door treatments, and gambrel roof.

Roof Finish Materials:	<u>Asphalt Shingle</u>		
Exterior Finish Materials	<u>Vinyl Siding</u>		

Exterior Description: The building at 65 Morningside Road is a two-story house with a rear ell form. Fenestration consists of 1/1, double-hung vinyl replacement windows throughout. The (north) façade features near symmetry on the first and second stories, with a central doorway flanked by windows, although the first story is slightly off center and there are a pair of small windows in the bay to the west of the door. All doors and windows are set in simple trabeated surrounds. The façade features a two-story porch supported by square columns wrapped in vinyl, and features vinyl railings on each story. The porch is covered by a wide portion of the gable-on-hip roof and the façade gable features a pair of small windows. The rear ell portion features a single façade bay with a pent roof above the first story. The east elevation features two bays on the main volume and on the rear ell portion. A shed-roof dormer is on the eastern slope of the roof and features a pair of windows.

Interior Description: N/A

Setting: The building at 65 Morningside Road is located in a residential area one block from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 65 Morningside Road is located in an early-twentieth-century development which included the in-filling of a saltwater pond and the extension of the peninsula into Egg Harbor. Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Allaback and Milliken, 1995; Ocean City, 2022).

Significance: The building at 65 Morningside Road is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The building at 53 Morningside Road is a two-story gable roof Colonial Revival-style house clad in wood shingles. The (north) façade has three bays and the east elevation has three bays on the first story and four on the second. The façade features a two-story porch with vinyl railings supported by slender Doric columns and topped by a low-pitched hipped roof. Fenestration is primarily 6/1, double-hung vinyl replacements with false muntins, and all windows and doors are set in simple trabeated wood surrounds. The first story façade features a central doorway, flanked by windows, with the window to the east itself flanked by narrow rectangular lights. The second story features a similar door and flanking windows scheme, with the door slightly off-center. The gable above the porch roof has a pair of small, four-light casement windows. All façade windows have vinyl shutters. The east elevation features a secondary entrance accessed by a short set of concrete block steps and covered by a gabled portico with brackets. This doorway is flanked by a pair of windows to the south and a single window to the north. The front gabled roof features cornice returns and is clad in asphalt shingles.

Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 33 Morningside Road is an altered Foursquare-style house clad in wood shingles and set upon a brick foundation. The second story projects slightly around the house's perimeter above the first story. The house features a one-story porch that wraps the (north) façade and west elevations and has vinyl railings and tapered square columns supporting a wide frieze and a pent roof. Fenestration consists of 6/6, double-hung vinyl replacement windows with false muntins set in simple wood surrounds. The first story of the façade features a central door in a simple trabeated surround flanked by windows. The side elevations on this story each have two bays: the west elevation with pairs of windows, and the east elevation with single windows in each bay. A shallow pent roof divides the first and second stories. The second story features a small patio on the pent roof with vinyl railings, accessed by a set of sliding doors set within a trabeated surround with a wide, paneled frieze, all set within a slightly projecting gabled dormer. The dormer is flanked by windows. The east slope of the roof has a shed roof dormer with three square windows. A square cupola rises from the cross gable ridge. The roof is clad in asphalt shingles.

Interior Description: N/A

Setting: The building at 33 Morningside Road is located in a residential area three blocks from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 33 Morningside Road is located in an early-twentieth-century development which included the in-filling of a saltwater pond and the extension of the peninsula into Egg Harbor. Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Allaback and Milliken, 1995; Ocean City, 2022).

Significance: The building at 33 Morningside Road is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 33 Morningside Road is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 33 Morningside Road is recommended Not Eligible for inclusion in the NRHP.

One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Allaback and Milliken, 1995; Ocean City, 2022).

Significance: The building at 29 Morningside Road is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 29 Morningside Road is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 29 Morningside Road is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 19 Morningside Road is a two-story gable front house clad in vinyl siding shaped to imitate wood shingles and resting on a concrete block foundation. Fenestration consists of 1/1, double-hung vinyl windows. The (north) façade features a three-story porch constructed of a concrete slab on a brick foundation. The porch features vinyl railings supports. The third level of the porch is incorporated into half of the overhanging gable. The first- story façade features a single doorway, window, and a pair of sliding doors. The second- story features two pairs of sliding doors. Secondary entrances are located on the east elevation. A gabled penthouse volume is set back from the gable ends.

Interior Description: N/A

Setting: The building at 19 Morningside Road is located in a residential area three blocks from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

Exterior Description: The building at 23 Morningside Road is a two-story, one-up, one-down style duplex featuring a full-width two-story porch and rests on a brick foundation. Fenestration consists primarily of 1/1, double-hung windows. The first and second stories have identical bays. The (north) façade features a doorway flanked on one side by a typical window and on the other by a pair of square single-paned windows. The east elevation features a clipped corner bay and pairs of windows. An exterior brick chimney rises up the east elevation. The two-story façade porch is supported by robust square brick pillars that transition to wood at the second story to the roof above. A wood staircase leads to the second story. The first story of the porch has vinyl railings, while the second story has rustic wood railings. The overhanging gable end features a square vent. The roof is clad in asphalt shingles.

Exterior Description: The building at 58 Morningside Road is a two-story Colonial Revival-style house set upon a brick foundation and clad in vinyl. The (south) façade is two bays wide and features a one-story porch topped by an open patio. Fenestration consists of 1/1, double-hung windows in vinyl surrounds. The first-story façade features two doors that open onto a brick and fieldstone porch with vinyl-wrapped square columns. The second story façade features a window and a door that opens onto a patio with a vinyl railing. The east elevation features a secondary entrance covered by a shallow gable and brackets. The second story on this side has a three-bay oriel window in the center of the wall. The building terminates in an asphalt shingle-clad roof with cornice returns.

Interior Description: N/A

Setting: The building at 58 Morningside Road is located in a residential area two blocks from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 58 Morningside Road is located in an early-twentieth-century development which included the in-filling of a saltwater pond and the extension of the peninsula into Egg Harbor. Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Allaback and Milliken, 1995; Ocean City, 2022).

Significance: The building at 58 Morningside Road is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 58 Morningside Road is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 58 Morningside Road is recommended Not Eligible for inclusion in the NRHP.

Setting: The building at 36 Morningside Road is located in a residential area two blocks from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 36 Morningside Road is located in an early-twentieth-century development which included the in-filling of a saltwater pond and the extension of the peninsula into Egg Harbor. Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Allaback and Milliken, 1995; Ocean City, 2022).

Significance: The building at 36 Morningside Road is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 36 Morningside Road is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 36 Morningside Road is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 10 Morningside Road is a two-story, one-up, one-down style duplex featuring a full-width two-story porch. The house rests on a brick foundation and is clad in vinyl and wood panel siding. Fenestration consist of 1/1 or 6/1 double-hung windows, the latter having false muntins. The (south) façade is three bays wide on each story, consisting of a central entrance flanked -hung windows to the west and a pair of square casement windows to the east, all set in trabeated wood surrounds. The West elevation features a secondary entrance and an exterior brick chimney. The two-story façade porch is supported by robust square brick pillars that transition to vinyl wrapped wood at the second story to the roof above. A wood staircase leads to the second story. Both stories of the porch have vinyl railings. The roof line is characterized by wide eaves. A hipped roof dormer on the south slope of the asphalt shingled roof features a pair of vents. The roof is clad in asphalt shingles.

Exterior Description: The building at 401 East Surf Road is a two-story Colonial Revival-style residence clad in vinyl siding. Fenestration consists of 6/1, double-hung vinyl windows with false muntins. The first story (north) façade features a central doorway with sidelights covered by a gabled portico. Flanking the door are three-sided bay windows with metal hipped roofs. There are four bays across the façade's second story. A two-bay attached garage with open air porch on second floor is located on the eastern side of the building and a covered porch is located above a one-story wing on the western side, enclosing an exterior chimney that gradually tapers toward the roof. The asphalt shingle-clad roof features a cupola centered on rooftop.

Interior Description: N/A

Setting: The building at 401 East Surf Road is located in a residential area one block from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 401 East Surf Road is located in an early-twentieth-century development which included the in-filling of a saltwater pond and the extension of the peninsula into Egg Harbor. Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Allaback and Milliken, 1995; Ocean City, 2022).

Significance: The building at 401 East Surf Road is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Exterior Description: The building at 364 Surf Road is a two-story Colonial Revival-style house on a brick foundation, featuring a two-story rear ell. Colonial Revival style elements included bracketed eaves, quarter fanlights in the gable end, and corner pilasters. Fenestration consists of 6/1, double-hung wood windows. The first story of the rear ell features a garage door covered by a wood awning. The building façade (east) features symmetrical bays, with a central entrance covered by a pedimented entry portico flanked by trios of windows on each side, and a row of six windows on the second story. The entrance is reached via a brick staircase topped by lion statues. The south elevation features a one-story projection with a patio on the roof. The east slope of the side gable roof features a shed roof dormer with three windows. The roof is clad in wood shingles.

Type:	N/A	Bays:	4
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl		

Exterior Description: The building at 376 East Surf Road is a two-story Colonial revival style residence clad in vinyl siding that imitates wood shingles. Fenestration consists of 6/6 double hung vinyl windows with false muntins. The (southeast) façade is dominated by a two-story addition consisting of a first-story enclosed sunroom and a second-story porch covered by an overhang and gable roof. The addition features Colonial Revival elements such as square wood pilasters and porch supports, geometric designs in the porch railings, and a semi-circular fan vent in the gable. A pair of double doors with sidelights set within a trabeated surround, opens onto the second story porch. The southeast slope of the roof features gable dormers with cornice returns. Façade and elevation, windows have vinyl shutters. The roof is clad in asphalt shingles. An attached to be a garage is situated at an oblique angle from the south corner of the house. It features a gable, roof, cornice returns, and a square cupola topped by a weathervane.

Interior Description: N/A

Setting: The building at 376 East Surf Road is located in a residential area two blocks from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 376 East Surf Road is located in an early-twentieth-century development which included the in-filling of a saltwater pond and the extension of the peninsula into Egg Harbor. Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Allaback and Milliken, 1995; Ocean City, 2022).

Significance: The building at 376 East Surf Road is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 376 East Surf Road is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 376 East Surf Road is recommended Not Eligible for inclusion in the NRHP.

Style:	None		
Form:	Other	Stories:	2.5
Type:	N/A	Bays:	5
Roof Finish Materials:	Shingle, Asphalt		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 4712 Central Avenue is a two-and-one-half-story house. with board and batten siding on the first-floor façade and vinyl, horizontal siding on the upper floors. Fenestration consists primarily of 6/1, double-hung vinyl windows, and some fixed windows, with false muntins. The (southeast) façade features a central entrance covered by a gabled portico supported by square columns flanked by windows. The side elevations each have one-story bonus room wings. A second-story deck is located on the western wing of the building. The second story features symmetrical fenestration consisting of a pair of square windows flanked on each side by two windows. Second-story windows are set in trabeated wood surrounds. A pair of double doors open onto the second-story patio deck. The double gable-on-hip roof is clad in asphalt shingles and features a double gabled dormer on the southwest slope.

Interior Description: N/A

Setting: The building at 4712 Central Avenue is located in a residential area one block from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 4712 Central Avenue is located in an early-twentieth-century development along the beach. Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Allaback and Milliken, 1995; Ocean City, 2022).

Significance: The building at 4712 Central Avenue is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 4712 Central Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 4712 Central Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials: <u>Asphalt shingle</u>	
Exterior Finish Materials <u>Vinyl</u>	

Exterior Description: The building at 5912-14 Central Avenue is a two-story duplex on a raised basement. The basement level is clad in stucco siding and features a covered breezeway along the (northeast) rear elevation. Fenestration consists of tall, narrow fixed windows in groups of three or four on the primary elevations, with smaller versions on the rear elevation. The southeast elevation facing the beach features three bays, with the side bays stepped back from the center bay. Each story has identical fenestration and bays, including curved staircases and balconies with vinyl railings. The upper stories are clad in vinyl siding. A gabled roof is clad in asphalt shingles.

Interior Description: N/A

Setting: The building at 5912-14 Central Avenue is located at the edge of a residential area, across street from beach, near Corson's Inlet State Park. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The building at 5912-14 Central Avenue is located in an early-twentieth-century development along the beach. Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Allaback and Milliken, 1995; Ocean City, 2022).

Significance: The building at 5912-14 Central Avenue is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 5912-14 Central Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history and is not significant under Criterion D. Due to a lack of significance, 5912-14 Central Avenue is recommended Not Eligible for inclusion in the NRHP.

Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Wood, Shingles		

Exterior Description: The building at 1015 South Ocean Avenue is a one-and-one-half-story single-family home with a gambrel roof, wood shingle siding, and a recessed porch. There is a pair of gabled dormers on the forward slope of the roof with paired 1/1 replacement sash. The first-story façade is four bays with the entrance in the second bay from the left. The porch has square columns and a partially shingled foundation with small windows. The side elevations are four bays with the bay closest to the rear elevation slightly dropped so that there is a break in the roofline.

Interior Description: N/A

Setting: The resource is an oceanfront property surrounded by like buildings with direct beach access. Historic aerial imagery shows that the current street layout in Seaside Park was almost entirely in place by 1920 except for the southwestern portion of the borough, and the entire borough was completely built out by 1972.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Seaside Park Borough is in Ocean County south of Seaside Heights and north of Island Beach State Park on the Barnegat Peninsula barrier island. Early Euro-American whalers built temporary camps on the barrier island in the mid-to-late-seventeenth century, but the area remained largely uninhabited until the latter half of the nineteenth century. The first permanent Euro-American settlement began in 1874 and was referred to as Park City. In 1875, the area became known as Seaside Park and witnessed development as lots were sold, houses were constructed, and roads were built. Hotels such as the Berkeley Arms and the Hiawatha were built in the late 1870s to attract vacationers and sportsmen. In 1881, the Pennsylvania Railroad established a line to Seaside Park from the mainland, stimulating additional growth in the community. In 1898 Seaside Park was incorporated as its own borough. The area soon boasted grand hotels, a yacht club, a casino, and a boardwalk and attracted visitors from Philadelphia and New York City. In 1911, a road was built along the Barnegat Peninsula from Bay Head to Seaside Park, and in 1915 the Tom's River Bridge was constructed, connecting Seaside Park to the mainland via Seaside Heights. Along with increasing tourism to Seaside Heights, the road and bridge also stimulated the fishing industry. The area witnessed the decline of the grand resorts in the mid- and late-twentieth century, replaced by more affordable hotels (Borough of Seaside Park, 2022; Heritage Studies, Inc., 1981). Today, Seaside Park continues to be a popular summer destination.

Significance: 1015 South Ocean Avenue is associated with mid-twentieth-century development in Seaside Park. The building is not representative of a significant architectural style or type and is not architecturally significant.

Eligibility for New Jersey

and National Registers:

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 1015 South Ocean Avenue is not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 1015 South Ocean Avenue is recommended Not Eligible for inclusion in the NRHP.

Exterior Description: The building at 905 – 907 South Ocean Avenue is a two-story elevated single-family home with wood shingle siding, a porch, and prominent hipped-roof dormers. The façade is three bays wide and the side elevations are four bays deep. The right bay of the first story is a carport while the center bay has paired 1/1 replacement sash. The left bay is a large staircase that leads to the hipped-roof porch above. The porch has square-paneled columns and shingled corner supports. The center bay of the second-story façade is a large plate-glass window. To the left of the window is the primary entrance. To the right of the window, the bay is recessed with a pair of 1/1 replacement sash and an additional 1/1 sash on the side of the center bay. The roof of the porch has deeply overhanging eaves that merge into a skirt roof on the side elevations before becoming part of the rear hipped roofline. The top of the porch is flat and sunken to form a balcony that wraps around the dormer on the façade. The dormer is like a bay window with tripartite 1/1 sash on the forward elevation and single 1/1 on the side elevations. The dormer is flanked on either side by sliding patio doors. The side elevations have complex massing with paneled oriel windows, shed roof overhangs, balconies, and both paired and single 1/1 sash fenestration.

ELIGIBILITY WORKSHEET

Historic Sites #:

History: The residence at 905-907 South Ocean Avenue appears to have originally been constructed as a two-story foursquare with a hipped-roof front porch. According to Bing (2012) and Google (2013) streetviews, the building underwent a radical rehabilitation and bears little resemblance to the original design.

Seaside Park Borough is in Ocean County south of Seaside Heights and north of Island Beach State Park on the Barnegat Peninsula barrier island. Early Euro-American whalers built temporary camps on the barrier island in the mid-to-late-seventeenth century, but the area remained largely uninhabited until the latter half of the nineteenth century. The first permanent Euro-American settlement began in 1874 and was referred to as Park City. In 1875, the area became known as Seaside Park and witnessed development as lots were sold, houses were constructed, and roads were built. Hotels such as the Berkeley Arms and the Hiawatha were built in the late 1870s to attract vacationers and sportsmen. In 1881, the Pennsylvania Railroad established a line to Seaside Park from the mainland, stimulating additional growth in the community. In 1898 Seaside Park was incorporated as its own borough. The area soon boasted grand hotels, a yacht club, a casino, and a boardwalk and attracted visitors from Philadelphia and New York City. In 1911, a road was built along the Barnegat Peninsula from Bay Head to Seaside Park, and in 1915 the Tom's River Bridge was constructed, connecting Seaside Park to the mainland via Seaside Heights. Along with increasing tourism to Seaside Heights, the road and bridge also stimulated the fishing industry. The area witnessed the decline of the grand resorts in the mid- and late-twentieth century, replaced by more affordable hotels (Borough of Seaside Park, 2022; Heritage Studies, Inc., 1981). Today, Seaside Park continues to be a popular summer destination.

Significance: 905 – 907 South Ocean Avenue is associated with early-twentieth-century development in Seaside Park. The building is not representative of a significant architectural style or type and is not architecturally significant.

Style:	None		
Form:	Four Square	Stories:	2.5
Type:	N/A	Bays:	3
Roof Finish Materials:	Asphalt Shingle		
Exterior Finish Materials	Vinyl Siding		

Exterior Description: The building at 330 Corinthian Avenue is a two-and-a-half-story vernacular residence constructed in 1920 and located a block from the beach. The house rests on a raised brick foundation, is clad in vinyl siding and is capped by a hip roof covered in asphalt shingles. The roof features hip-roof dormers on the north, south, and east elevations. The façade faces Corinthian Avenue and exhibits a wrap-around front porch with a hipped roof supported by battered columns resting on brick posts. The foundation has been raised and features living space in the basement level. The house features numerous bay windows on both the first and second stories. The dormer facing Corinthian Avenue has a jerkinhead roof and features a Palladian window. Fenestration consists of 1/1 replacement windows, and French doors sheltered by the wrap-around porch.

Interior Description: N/A

Setting: The building at 330 Corinthian Street is located in a densely populated beachside community in Ocean City, one block from the beach. The city was initially platted to the southwest of North Street in an orderly grid with three main thoroughfares (Bay Avenue, West Avenue, and Wesley Avenue) traveling in a northeast-southwest direction. The neighborhood to the northeast of North Street was developed beginning in the 1930s with curvilinear streets and houses built in the revival styles popular at the time. Like most of the seaside towns along the Jersey Shore, Ocean City has seen large-scale demolition of historic-era homes in favor of three-to-four-story dwellings. The northwest extent of Ocean City fronting the Great Egg Harbor Bay was developed beginning in the 1970s with the bulk of development occurring in the 1980s (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Ocean City is in Cape May County and occupies the entirety of Peck's Beach Island. One of the first Europeans to utilize present-day Ocean City was John Peck, a whaler, who used the island as a storage place for his caught whales in the 1700s. In 1879, the Ocean City Association was formed by a group of Methodist ministers and purchased Peck's Beach. The group envisioned creating a Christian seaside resort. They sold commercial and residential lots. Over 500 building lots were sold by the end of 1881 and a large auditorium, later known as the Tabernacle, was constructed by the Association. This was followed by hotels and a boardwalk. Ocean City was officially incorporated as a city on March 25, 1897. The area continued to develop throughout the years and quickly became a prominent seaside resort. An element of the vision the founding ministers had to create a seaside resort that exemplified Christian ideals remains today, as Ocean City has remained a dry town, with no public drinking establishments. This also resulted in smaller-scale development in the city when compared to other resort destinations such as Atlantic City, Margate City, and Ventnor City to the northeast (Ocean City, 2022; Allaback and Milliken, 1995).

Significance: The building at 330 Corinthian Street is associated with early-twentieth-century development in Ocean City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Roof Finish Materials: <u>Asphalt shingle</u>	
Exterior Finish Materials <u>Vinyl siding</u>	

Exterior Description: The building at 628 Carson Avenue is a two-story, four-bay duplex building. The building is clad in vinyl siding and is capped with a low-pitch, asphalt shingle roof. The primary façade features a set of stairs that runs across two bays. The first story contains five asymmetrical, single pane windows in the left bays. The rightmost bay houses the garage and an entrance, which are partially protected by an overhanging roof. The second story features a landing for the stairs with access to the second story entrance. The six, second story windows are single pane, and asymmetrical.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 628 CARSON AVE is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

Roof Finish Materials: <u>Unknown</u>	
Exterior Finish Materials <u>Stucco</u>	

Exterior Description: The building at 311 North Delaware Avenue is a two-story, two-bay building clad in stucco. There is a first-story storefront that has a clipped corner bay. The second story is topped with a parapet and features an oriel window clad in vinyl. An identical oriel appears on the street-facing side elevation. The fenestration is 1/1 sash singly, in pairs, and in groups of three.

Interior Description: N/A

Setting: During the casino and urban renewal era in Atlantic City, large-scale demolition took place during the construction of the high-rise hotels and casinos near the boardwalk and beach. The eastern extent of the city saw the most demolition; however, little reconstruction occurred in this area of the city resulting in large areas of vacant lots and land. Many vacant lots in proximity to the casinos now function as parking lots, creating a lack of cohesion in the built fabric of the city. The residential neighborhoods to the north and northwest of the casino district have also seen demolitions since the 1970s; however, many of the lots were built on and these areas have avoided the gaping pockets of vacant land seen closer to the boardwalk (NETR, 2023).

Survey Name:	Atlantic Shores Offshore Wind – Wind Turbine Area - Aboveground Historic Properties Survey	Date:	February 27, 2023

ELIGIBILITY WORKSHEET

Historic Sites #:

History: Atlantic City is in the extreme eastern extent of Atlantic County on Absecon Island on the coast of the Atlantic Ocean. The city is bordered to the northeast by the city of Brigantine and to the southwest by Ventnor City. The first recorded Euro-American settler was Jeremiah Leed who built a house in the vicinity of Atlantic City in 1783. In 1850, Dr. Jonathan Pitney proposed the development of a seaside resort on the island. In 1852, he and other investors secured a railroad charter, and the Camden and Atlantic Railroad was constructed with its terminus in Atlantic City in 1854. The city was formally incorporated the same year and the resort quickly became a popular tourist destination for visitors from Philadelphia and its suburbs. Atlantic City saw the height of its popularity in the late nineteenth and into the early twentieth century. A financial and commercial district was constructed along Atlantic Avenue and included high-style banks as well as commercial and institutional buildings. The 1950s brought a decline in visitation due to the advent of air travel and the newly formed highway system in the United States. To revive the city, gambling was legalized in 1976 and Atlantic City enjoyed a boom in tourism (Allaback and Milliken, 1995; ACFPL, 2022).

Significance: 311 North Delaware Avenue is associated with twentieth-century development in Atlantic City. The building is not representative of a significant architectural style or type and is not architecturally significant.

**Eligibility for New Jersey
and National Registers:**

☐ Yes

☒ No

National

Register Criteria:

☐ A

☐ B

☐ C

☐ D

Level of Significance

☐ Local

☐ State

☐ National

Justification of Eligibility/Ineligibility: Background research did not reveal any associations with historically important events or persons; therefore, 311 North Delaware Avenue not known to be significant under Criterion A or B. It does not embody distinctive characteristics of a type, period, or method of construction, and it does not represent the work of a master or possess high artistic value; thus, it is not significant under Criterion C. The building appears unlikely to yield information important in prehistory or history, and is not significant under Criterion D. Due to a lack of significance, 311 North Delaware Avenue is recommended Not Eligible for inclusion in the NRHP.

ATTACHMENT L

Resumes

Grant is a Senior Project Manager at EDR with more than 12 years of professional experience. He has had extensive training in reconnaissance and intensive-level architectural surveys, as well as the National Register of Historic Places (NRHP) nomination process and meets the Qualifications for the Secretary of the Interior's Standards for Architecture and Historic Preservation (per 36 CFR 61). Mr. Johnson holds a Master of Arts degree in Historic Preservation Planning from Cornell University, and a Bachelor of Arts degree in Anthropology from Syracuse University.

As a Senior Project Manager with EDR, Grant is responsible for overseeing historic-architectural resources surveys; NRHP eligibility determinations and nominations; literature review/research conducted in support of cultural resources and environmental analyses; assisting in preparation of Phase IA/IB cultural resources surveys; and providing visual impacts analyses relative to historic resources for state permitting documents. Grant also has extensive experience and relationships consulting with State Historic Preservation Office (SHPO) staff and other regulatory agencies in New York, New Jersey, Maryland, and Ohio.

Education

- Master of Arts, Historic Preservation Planning, Cornell University Ithaca, NY, 2010
- Bachelor of Arts, Anthropology, Syracuse University, Syracuse NY, 2001

Professional Affiliations

- Preservation Association of Central New York
- Historic Preservation Planning Alumni of Cornell University
- Onondaga Historical Association, Syracuse, New York

Employment History

- Senior Project Manager, Historic Preservation, Environmental Design & Research, Landscape Architecture, Engineering, & Environmental Services, D.P.C., Syracuse, NY, 2019-present
- Cultural Resources Project Manager, Environmental Design & Research, Landscape Architecture, Engineering & Environmental Services, D.P.C., Syracuse, NY, 2017-2019
- Senior Cultural Resources Specialist, Environmental Design & Research, Landscape Architecture, Engineering & Environmental Services, D.P.C., Syracuse, NY, 2012-2017

Project Experience

New York State Office of Parks, Recreation & Historic Preservation (NYSOPRHP) Consultation, Various Counties, New York State – Prepared and submitted over 100 submittals for NYSOPRHP/SHPO consultation through the Cultural Resource Information System (CRIS) website, including preparation of project narratives, maps, photographs and supporting historical documentation as needed for projects located in over 20 counties in New York State.

New York State Department of Transportation (NYSDOT) Consultation, Various Counties, New York State – Prepared and submitted over 25 Section 106 submittals/cultural resources screenings for NYSDOT consultation, including preparation of project narratives, maps, photographs and cultural resources surveys as needed for projects located in over 15 counties in New York State.

Main Street Historic District, City of Binghamton, Broome County, NY – Supervised and assisted in the preparation of a nomination to the State and National Registers of Historic Places for 84 contributing resources within an eight-block area along Main Street west of the Chenango River. The district was added to the National Register of Historic Places in November 2021.

EJ Toe Box Part 1 Historic Rehabilitation Tax Credit Application, Village of Johnson City, Broome County, NY – Supervised and assisted in the preparation of Part 1 of the HRTC Application for the former Endicott-Johnson Toe Box Factory, located in the NRHP-listed Johnson City Historic District.

Downtown Syracuse Commercial Historic District, Syracuse, NY – Prepared nomination forms and conducted background research for a boundary expansion to the National Register of Historic Places (NRHP)-listed South Salina Downtown Historic District, to include adjacent blocks of South Warren and South Salina Streets comprising the historic commercial core of downtown. Collaborated with the client, city and New York State Office of Parks, Recreation and Historic Preservation (NYSOPRHP) staff in identifying resources to include and document in the nomination. The boundary expansion was added to the National Register of Historic Places in May 2014.

Historic Resources Survey, Former Village of Danforth, Syracuse, Onondaga County, NY – Wrote neighborhood historic context, and assisted in development of historic resource inventory forms and visual field guide to enable community volunteers to conduct a neighborhood historic resource survey of over 300 buildings for the City of Syracuse Bureau of Planning and Sustainability.

Chittenango Landing Canal Boat Museum Cultural Landscape Report, Town of Sullivan, Madison County, NY- Engaged in historic research and assisted in preparation of Part 1 and limited Part 2 Treatment Plan of a Cultural Landscape Report (CLR) for a 6-acre historic site listed on the NRHP. The interpretive site includes a 19th-century dry dock complex and associated buildings located on the Old Erie Canal.

Onondaga Lake West Revitalization Area, Towns of Camillus & Geddes & Village of Solway, Onondaga County, NY- Conducted historic research and field visits in preparation of Phase 1 cultural resources surveys for proposed streetscape improvements to Bridge Street and Milton Avenue in the Village of Solway, Onondaga County, New York, and prepared a Phase 1A cultural resources survey to assess development potential of former brownfields. The Project area includes a former Enlarged Erie Canal lock and partially-flooded portion of the Enlarged Erie Canal.

Montezuma Heritage Park and Giardina Park, Town of Montezuma, Cayuga County, NY- Engaged in historic research and archaeological reconnaissance survey and prepared Phase 1A cultural resources surveys for a proposed 168-acre heritage park and an additional 16-acre town park. The Project area includes portions of both routes of the Erie Canal, an intact Cayuga-Seneca Canal lock, the remains of the Richmond Aqueduct, and archaeological resources associated with a century of canal operation in the hamlet of Montezuma.

New York State Fairgrounds Mitigation Documentation, Town of Geddes, Onondaga County, NY- Recorded documentation of structures proposed for demolition or alteration as part of renovations to the NRHP-eligible New York State Fairgrounds Historic District. Resources proposed for removal included contributing and non-contributing features such as Empire Court, the Grandstand, Race Track, Stables, and Gate 1 Area.

Cemetery Long-Term Maintenance & Restoration Plan, Village of Liverpool, Onondaga County, NY- Conducted historic research and site documentation for a landscape preservation planning project, associated NYS Consolidated Funding Application (CFA), and public outreach for a 6-acre cemetery listed on the National Register of Historic Places (NRHP).

Interstate 81 (I-81) Viaduct Project, City of Syracuse, Onondaga County, NY- Assisted in preparation of Phase 1A Archaeological Sensitivity Assessment as part of Section 106 of the National Historic Preservation Act consultation and National Environmental Protection Act (NEPA) review for New York State Department of Transportation (NYSDOT) PIN 3501.60, D031085 – the replacement of approximately 5 miles of elevated highways. Conducted historic research and prepared historic context statements for Phase 1A report.

Interstate 690 (I-690) Teall Avenue & Beech Street Interchange, City of Syracuse, Onondaga County, NY- Assisted in preparation of archaeological resources screening as part of National Environmental Protection Act (NEPA) review and Section 106 consultation for the NYSDOT for a bridge replacement and intersection improvement of 0.5-mile elevated highway.

Creekwalk Phase II, City of Syracuse, Onondaga County, NY- Preparation of a Section 106 Project Submittal Package and assisting in preparation of Phase 1A Archaeological and Historic Architectural Surveys for the 2.2-mile extension of the Syracuse Creekwalk from Armory Square to Kirk Park along Onondaga Creek.

Morris Ridge Solar Project, Livingston County, NY- Technical lead for Phase IA historic resources survey, historic resources survey/effects analysis, State Historic Preservation Office (SHPO) consultation, and Siting Board testimony in support of Article 10 Application to the New York State Board on Electrical Generating Siting and the Environment (NYSPSC Case No. 18-F-0440) for a proposed 175 MW wind energy facility.

Bluestone Wind Farm, Broome County, NY- Technical lead for historic resources survey and effects analysis, State Historic Preservation Office (SHPO) consultation, cultural resources mitigation, and Siting Board testimony in support of Article 10 Application to the New York State Board on Electrical Generating Siting and the Environment (NYSPSC Case No. 16-F-0559) for a proposed 124 MW wind energy facility.

High Bridge Wind Farm, Chenango County, NY- Technical lead for historic resources survey and effects analysis, State Historic Preservation Office (SHPO) consultation, cultural resources mitigation, and Siting Board testimony in support of Article 10 Application to the New York State Board on Electrical Generating Siting and the Environment (NYSPSC Case No. 18-F-0262) for a proposed 100 MW wind energy facility.

Flint Mine Solar, Greene County, NY- Technical lead for historic resources survey/effects analysis and State Historic Preservation Office (SHPO) consultation for proposed 100 MW solar energy facility pursuing a certificate of environmental compatibility and public need under Article 10 of the New York State Public Service Law (NYSPSC Case No. 18-F-0087).

Riverhead 2 Solar Project, Suffolk County, NY- Technical lead for Phase IA cultural resources survey and State Historic Preservation Office (SHPO) consultation in support of Article 10 Application to the New York State Board on Electrical Generating Siting and the Environment (NYSPSC Case No. 17-F-0655) for a proposed 36 MW solar energy facility.

Mohawk Solar, Montgomery County, NY- Technical lead for historic resources survey, historic resources effects analysis, and cultural resources mitigation consultation for a proposed 90 MW solar energy project under Article 10 of the New York State Public Service Law (NYSPSC Case No. 17-F-0182).

Galloo Island Wind Project, Jefferson County, NY- Performed an historic resources visual effects analysis and prepared subsequent report for a proposed (up to) 109 MW wind energy facility located on Galloo Island in Lake Ontario and consulted with New York State Historic Preservation Office (SHPO) staff in the development of work plan for historic resources surveys.

South Fork Wind Farm, On-shore Transmission Line, Suffolk County, NY- Assisted in preparation of Historic-Architectural Resources Survey as part of consultant team with AECOM and VHB in support of an Article VII application for a 138kV underground transmission line and new substation associated with a proposed 90-MW offshore wind energy project.

Baron Winds Project, Steuben County, NY- Completed a Historic Architectural Resources Survey in support of Article 10 Application to the New York State Board on Electrical Generating Siting and the Environment for a proposed (up to) 300 MW wind energy project with up to 80 wind turbines and consulted with New York State Historic Preservation Office (SHPO) staff in the development of work plan for historic resources surveys.

Cassadaga Wind Farm, Chautauqua County, NY- Conducted historic resources survey and engaged in State Historic Preservation Office (SHPO) consultation in support of Article 10 Application to the New York State Board on Electrical Generating Siting and the Environment for a proposed 58 wind turbine, 126 MW wind energy facility; consulted with New York State Historic Preservation Office (SHPO) staff in the outreach and development of plan for mitigation of visual impacts to historic resources. Conducted outreach to stakeholders in support of identifying and developing potential cultural resources mitigation projects as requested by SHPO and required by the Section 106 process.

Revolution Wind Farm, Visual Impact Assessment, Offshore MA/RI- This project includes the on-going preparation of an historic resources visual effects analysis associated with an offshore wind farm located off the coasts of Massachusetts and Rhode Island. Task manager responsible for technical oversight of all research and consultation with relevant state and federal agencies, client and other sub consultant coordination, and preparation of the historic resources visual effects analysis report including maps and other graphics.

Skipjack Wind Farm, Visual Impact Assessment, Offshore DE- This project includes an historic resources visual effects analysis associated with an offshore wind farm located off the coast of Delaware and Maryland. Provided task management and technical oversight for all research, consultation with relevant state and federal agencies, client and other sub consultant coordination, and preparation of the historic resources visual effects analysis report including maps and other graphics.

Arkwright Summit Wind Farm, Chautauqua County, NY- Conducted historic resources assessment and visual effects analysis to support environmental permitting under New York State Environmental Quality Review Act (SEQRA) for a proposed 36-turbine, 78-megawatt (MW) wind energy facility and associated 3-mile generator lead.

Jericho Rise Wind Farm, Franklin County, NY- Conducted historic resources survey and visual effects analysis and engaged in SHPO consultation in support of SEQRA review and U.S. Army Corps of Engineers and New York State Department of Environmental Conservation (NYSDEC) wetland permitting for a proposed 37 wind turbine, 78 MW wind energy facility.

Great Bay Wind Energy Center, Somerset County, MD- Conducted historic context research, visual fieldwork and architectural survey fieldwork, and prepared an Historic Resources Assessment as part of the Maryland Historical Trust review of a proposed 30-turbine, approximately 99 MW wind energy project.

Copenhagen Wind Farm, Lewis County, NY- Conducted historic context research, visual fieldwork and architectural survey fieldwork, and assisted in preparation of a Phase 1 cultural resources survey as part of State Environmental Quality Review Act (SEQRA) review of a proposed 49-turbine, approximately 80 MW wind energy project.

Black Oak Wind Farm, Town of Enfield, Tompkins County, NY- Conducted historic context research and assisted in preparation of a Phase 1A cultural resources survey and visual effects analysis as part of SEQRA review of a proposed 7-turbine, approximately 12.6 MW wind energy project.

Crown City Wind Project, Cortland County, NY- Conducted historic context research and assisted in preparation of a Phase 1A cultural resources survey and visual effects analysis as part of SEQRA review of a proposed 7-turbine, approximately 12.6 MW wind energy project.

Solar Development Projects (Private Client), Hudson Valley, New York State- Prepared cultural resources background documents and initiated SHPO consultation for four proposed utility-scale solar energy projects in the Hudson Valley.

Great Bay Solar I, Somerset County, MD- Prepared historic resources assessment in support of Maryland Public Service Commission review for a Certificate of Public Convenience and Necessity (CPCN), for a proposed 100 MW solar energy project located on 800-acres.

Indian River Bridge Replacement, Town of Chatham, Columbia County, NY- Prepared historic resource inventory forms and determined NRHP-eligibility for two architectural resources adjacent to a proposed bridge replacement along County Route 9 over Indian Creek.

Boundary Breaks Vineyard, Town of Lodi, Ithaca, NY- Conducted research on 19th century vineyards and historic Greek Revival architecture in collaboration with EDR and King+King landscape architects to present to client for use in potential designs for viticulture facilities and site located on Seneca Lake in the Finger Lakes region of New York.

Hotel Syracuse, City of Syracuse, Onondaga County, NY- Conducted historic research on the area surrounding the NRHP-listed Hotel Syracuse for proposed improvements to the Harrison Street corridor as part of the \$57 million redevelopment of the 1924 hotel.

East Main Street Streetscape Improvements, City of Rochester, Monroe County, NY- Prepared a Section 106 Project Submittal Package for proposed streetscape improvements and installation of pedestrian wayfinding signage along East Main Street, including the assessment of potential impacts to several NRHP-listed and NRHP-eligible buildings and structures.

Clayton Riverwalk Phase III, Village of Clayton, Jefferson County, NY- Prepared a Section 106 Project Submittal Package for the proposed construction of Phase III of the Clayton Riverwalk. Conducted historic research and assessed potential impacts to the NRHP-listed Clayton Village Historic District.

Center State NY Inland Port (Private Client) Onondaga County, NY- Assisted in preparation of a Phase 1 Archaeological Survey for a proposed shipping container storage/transportation center located in two towns in Onondaga County, New York.

Chain Works District Redevelopment Project, City of Ithaca, Tompkins County, NY- Prepared of Phase 1A Archaeological Survey in support of SEQRA review of 95-acre industrial site proposed for redevelopment. Conducted historic research, site visit, and assessment of potential impacts to NRHP-eligible Morse Chain Works Historic District.

Cumberland Bay State Park Camping Area Comfort Station Replacements, Town of Plattsburgh, Clinton County, NY- Assisted in preparation of a Phase 1 Archaeological Survey for the replacement of comfort stations at Cumberland Bay State Park. Conducted historic research and assessed impact to previously documented historic resources including the Cumberland Bay National Historic Landmark.

School of Pharmacy, Binghamton University, Village of Johnson City, Broome County, NY- Prepared Phase 1A archaeological survey on behalf of the State University Construction Fund (SUCF) for a 5.5-acre site proposed for new academic building. Conducted historic research and assessed potential impacts to NRHP-listed Johnson City Historic District.

Covered Bridge, Town of Newfield, Tompkins County, NY- Conducted historic research and field visits, and prepared a Phase 1A cultural resources survey for a proposed historic bridge rehabilitation project (New York State Department of Transportation [NYSDOT] Project 37550) on the NRHP-listed Newfield Covered Bridge.

Owasco River Greenway Trail, City of Auburn & Town of Fleming, Cayuga County, NY- Assisted in preparation of a Phase 1A cultural resources survey and conducted historic context research for a proposed 8.4-mile, multi-modal recreational trail (NYSDOT Project 37557).

Mary Cariola Children's Center, Town of Henrietta, Monroe County, NY- Conducted historic background research and assisted in preparation of a Phase 1 cultural resources survey in support of NYSOPRHP project review of a proposed 32-lot residential subdivision.

Loveless Farms Subdivision, Town of Skaneateles, Onondaga County, NY- Assisted in archaeological fieldwork, as well as preparation of a Phase 1 cultural resources survey in support of Town of Skaneateles planning board review of a proposed 18-lot, 47-acre residential subdivision.

Wilcox Estates Subdivision, Town of Barton, Tioga County, NY- Assisted in archaeological fieldwork, as well as preparation of a Phase 1 cultural resources survey in support of NYSOPRHP project review of a proposed 32-lot residential subdivision.

Barcelona Water Improvement District, Town of Westfield, Chautauqua County, NY- Assisted in archaeological fieldwork and preparation of a Phase 1A for proposed installation of 10,450 feet of new water main lines and 77 service connections.

Seneca Park Zoo, City of Rochester & Town of Irondequoit, Monroe County, NY- Conducted historic context research and assisted in preparation of a Phase 1 cultural resources survey in support of SEQRA review of a 1.5-acre parcel.

White Pine Commerce Park, Town of Clay, Onondaga County, NY- Conducted historic context research, assisted in archaeological fieldwork, as well as preparation of a Phase 1 cultural resources survey in support of SEQRA review of a 300-acre parcel and 4-mile sewer line.

Van Dyke Road Substation, National Grid, Town of Bethlehem, Albany County, NY- Conducted historic background research, visual fieldwork, and assisted in preparation of a Phase 1 cultural resources survey in support of NYSOPRHP project review of a proposed 4.3-acre substation.

St. Lawrence Gas Pipeline, Village of Brushton, Franklin County, NY- Conducted historic research and prepared a memorandum as part of an Unanticipated Discovery Response related to a historic church cemetery.

A & C Transmission Lines, Central Hudson Gas & Electric, Towns of Pleasant Valley, LaGrange, Wappinger, & East Fishkill, Dutchess County, NY- Conducted historic context research and assisted in preparation of a Phase 1 cultural resources survey in support of Public Service Commission (PSC) review under Article VII of upgrades to an 11-mile 115kV transmission line.

Empire Brewing Company Farmstead Brewery, Village of Cazenovia, Madison County, NY- Assisted in visual fieldwork and preparation of Historic Sites Visual Effects Analysis for a proposed farmstead brewery. Photographed views from adjacent properties listed on the NRHP and assessed potential adverse visual effects to these and other sensitive resources.

School of Medicine & Biological Sciences, University at Buffalo, City of Buffalo, Erie County, NY- Assisted in visual fieldwork, and preparation of Draft Environmental Impact Statement (DEIS) and support studies (including archaeological sensitivity assessment and historic resources impact assessment) for a proposed medical/educational facility.

Valley Reliability Project, National Grid & Public Service of New Hampshire Merrimack- Engaged in visual fieldwork in support of visual simulations and a visual impact assessment for a proposed 345kV electrical transmission line extending from Londonderry, New Hampshire to Tewksbury, Massachusetts.

Stiles Brook Wind Project, Towns of Grafton & Windham, Windham County, VT- Conducted visual fieldwork in support of visual simulations for a proposed 32-turbine wind project.

W/H 1/2 & G Line North Transmission Lines, Central Hudson Gas & Electric, Ulster & Dutchess Counties, NY- Engaged in visual fieldwork and assisted in preparation of Part 102 reports for an 11-mile 69kV electrical transmission line rebuild project in Ulster County, New York (WH-1/2 Line) and an 8.5-mile 69kV electrical transmission line rebuild project in Dutchess County, New York (G Line North) to be submitted to the Public Service Commission (PSC).

Aquidneck Island Reliability Project, Town of Middletown & City of Newport, Newport County, RI- Conducted visual fieldwork for proposed transmission line and substation improvements; assisted in preparation of Visual Impact Assessment for transmission line as well as substation removals.

Ticonderoga-Whitehall Transmission Line, National Grid, Essex & Warren Counties, NY- Conducted visual fieldwork for proposed structure upgrades to the Ticonderoga-Whitehall #3 and Ticonderoga-Republic #2 lines. Photographed existing lines at road crossings as well as locations of poles to be replaced in accordance with Adirondack Park Agency guidance.

Onondaga Lake Park & Parkway & Jordan Erie Canal Park, Onondaga County, NY- *Prior to EDR*, Master's thesis (title: *Emergency Employment, Public Enjoyment: Pre-New Deal Work Relief in Onondaga County, New York, 1931-1933*) and multi-year research project examining the influence of the Onondaga County Emergency Work Bureau in creating designed recreational landscapes through the conversion of abandoned canal beds, and the interpretation and preservation of these places over time, as well as a history of pre-New Deal work relief programs in New York State. Research presented at 2010 Conference on New York State History.

Administrative History of Maritime Tourism Programs in the State of Michigan- *Prior to EDR*, Conducted research and interviews for an administrative history of tourism programs related to the maritime history of Michigan over the past 100 years.

Collaborated with personnel from the Organization of American Historians (OAH), as well as the National Park Service (NPS) Midwest Regional Office in preparation of report as part of the NPS Michigan Maritime Heritage Special Resource Study.

Michigan Maritime Heritage Special Resource Study, Upper and Lower Peninsulas of Michigan- *Prior to EDR*, Co-designed survey form and engaged in two field surveys examining over 250 resources along the coasts of the Upper and Lower Peninsulas of Michigan for integrity and significance to maritime heritage. Worked with NPS staff as well as Michigan state historic preservation officers in a collaborative context to further the goals of the study to organize and encourage collaboration of agencies and institutions interested in the promotion of maritime heritage.

Civil War Battlefields Special Resource Study, Newtonia, MO- *Prior to EDR*, Conducted extensive historic research and co-authored historic context and other study sections for Civil War battlefields in Newtonia, Missouri to determine if they met the criteria to become a unit of the National Park Service. Published January 2013.

New Philadelphia Townsite Reconnaissance Survey, Barry, IL- *Prior to EDR*, Conducted extensive historic research and co-authored historic context and other study sections for the first settlement by a freed slave prior to the Civil War, to determine if the site met the criteria to become a unit of the National Park Service. Published January 2012.

Historic Resources Survey & Historic Preservation Report, Ogdensburg, NY- *Prior to EDR*, Designed and conducted a reconnaissance-level historic resources inventory corresponding the City of Ogdensburg Downtown Revitalization Plan. Drafted Historic Preservation Report detailing findings of the survey, making recommendations for further preservation planning and initiatives under the Historic Preservation Ordinance of the City of Ogdensburg. Report was adopted by the city in April 2011.

Historic Structure Report (HSR), Lakeview Cemetery Mausoleum, Ithaca, NY- *Prior to EDR*, Drafted Historic Structure Report for a 1912 mausoleum designed by Buffalo, New York architects Green and Wicks. Conducted extensive documentation and analysis of building systems and site, noting deterioration. Additional activities included sorting and separation of historic building materials, supervising cleaning methods for bronze hardware and marble flooring and burial niche framework, and measured drawings of mausoleum.

Cultural Landscape Site History, Christ Church & Manlius Village Cemeteries, Manlius, NY- *Prior to EDR*, Prepared a draft Cultural Landscape Site History for two NRHP-listed cemeteries in the Village of Manlius, NY. Documentation and analysis of site conditions and maintenance plan, and recommendations for continued maintenance and restoration. Findings presented at 2009 annual meeting of the Alliance for Historic Landscape Preservation.

Neighborhood Survey, Skaneateles, NY- *Prior to EDR*, Assisted in intensive-level survey of over 50 historic properties in the Village of Skaneateles for submission to the NYSOPRHP for a determination of eligibility for a historic district. Conducted historic research, documented exterior conditions and architectural details of 10 properties, and presented findings to village residents and local historical society.

Tomorrow's Neighborhoods Today (TNT) West Side Five-Year Neighborhood Plan, Syracuse, NY- *Prior to EDR*, Assisted in preparation of the *West Side TNT Five-Year Neighborhood Plan 2008-2012* for the west side neighborhood of Syracuse, New York as part of the Tomorrow's Neighborhoods Today program. Report published 2012.

presentations / publications

Parks and Parkways – The Onondaga County Emergency Work Bureau, 1931-1933, Conference on New York State History, Ithaca, NY, June 2010.

Christ Church and Manlius Village Cemeteries – A Landscape History, Alliance for Historic Landscape Preservation, Annual Meeting, St. Louis, MO, May 2009.

Additional Employment History

- Independent Consultant, Organization of American Historians, Bloomington, IN, and National Park Service Midwest Regional Office, Omaha, NE, 2011
 - Preservation Planning Intern, National Park Service Midwest Regional Office, Omaha, NE, 2010-2011
 - Planning and Development Intern, Department of Planning & Development, Ogdensburg, NY, 2009
 - Neighborhood Planning Intern, Department of Community Development, Division of Neighborhood Planning, Syracuse, NY, 2007-2008
-

Education

- Master of Historic Preservation, University of Maryland, College Park, MD, 2005
- Bachelor of Arts in Humanities, Providence College, Providence, RI, 2001

Employment History

- Senior Project Manager, Environmental Design & Research, Landscape Architecture, Engineering, and Environmental Services, D.P.C., Syracuse, NY, 2021
- National Practice Leader – Cultural Resources, Nova Group GBC, New Orleans, LA, 2021
- Director – Cultural Resources, CRBE, New Orleans, LA & White Plains, NY, 2015-2020
- Deputy State Historic Preservation Officer/Construction Grants Coordinator, CT State Historic Preservation Office, Hartford, CT, 2011-2015
- Architectural Historian, EnviroBusiness, Inc., Brookfield, CT, New York, NY, & York, PA, 2005-2011
- Research Assistant, National Trust for Historic Preservation, President Lincoln and Soldiers' Home National Monument, Washington, D.C., 2004-2005

Laura serves as a Senior Project Manager-Historic Preservation with more than 16 years of professional experience. Laura holds a Master's in Historic Preservation from the University of Maryland, College Park and meets the Qualifications for the Secretary of the Interior's Standards for Architecture and Historic Preservation (per 36 CFR 61). Prior to joining EDR, Laura served as the National Practice Leader-Cultural Resources at Nova Group, GBC, the Director of Cultural Resources at CBRE, and Deputy State Historic Preservation Officer at the Connecticut State Historic Preservation Office (SHPO). She has completed thousands of project reviews under Section 106 of the National Historic Preservation Act throughout the country and has expertise in complex consultations regarding potential effects on historic properties.

As Senior Project Manager-Historic Preservation, Laura is responsible for supporting historic preservation projects; National Register of Historic Places (NRHP) eligibility determinations and nominations; literature review/research conducted in support of cultural resources and environmental analyses; assisting in preparation of cultural resources surveys; and providing visual impacts analyses relative to historic resources for state and federal permitting documents. In addition, Laura provides clients with senior strategic advice, planning, and technical support for projects requiring review under Sections 106 and 110 of the National Historic Preservation Act (NHPA), the National Environmental Policy Act (NEPA).

Project Experience

Cedar & Saint Development, Section 106 and Mitigation, Mobile, AL – Authored the Section 106 submittal and developed a mitigation plan for a proposed development within a NRHP-listed historic district. Served as client's point-of-contact with consulting parties and SHPO and HUD.

Revolution Wind Farm, Section 106 & Cultural Resources Strategic Oversight, Offshore, MA, RI – Project Manager for development of Historic Property Treatment Plans (HPTs) for historic properties adversely affected by the proposed 880-MW offshore wind farm located off the coast of southern New England. Provided consulting for cultural resources and visual effects assessments, Section 106 of the NHPA, SHPO, and stakeholder consultation for a historic resources effects analysis, and proposed mitigation strategies.

South Fork Wind Farm, Section 106 & Cultural Resources Strategic Oversight, Offshore, NY/New England – Project Manager for development of HPTs for historic properties adversely affected by the proposed 132-megawatt offshore wind farm located off the coast of southern New England. Provided consulting for cultural resources assessments, Section 106 of the NHPA, SHPO, and stakeholder consultation for historic resources effects visual analysis, and proposed mitigation strategies.

Sunrise Wind, Section 106 & Cultural Resources Strategic Oversight, Offshore NY/New England – Project Manager for cultural resources assessments, Section 106 of the NHPA, SHPO, and stakeholder consultation for historic resources visual effects analysis, and proposed mitigation strategies for a proposed 880-MW offshore wind farm located off the coast of Southern New England.

Skipjack Wind Farm, Section 106 & Cultural Resources Strategic Oversight, Offshore, MD, DE – Senior technical support for cultural resources assessments, Section 106 of the NHPA, SHPO, and stakeholder consultation for a historic resources effects analysis, and proposed mitigation strategies for a proposed 120-MW offshore wind farm located off the coast of Delaware and Maryland.

Selected Professional Experience (Prior to EDR)

National Practice Leader, Cultural Resources, Nova Group, GBC (2021) – Developed scopes of work for Section 106 consultation projects for Federal and State agencies. Completed and/or provide Quality Control for Section 106 projects for multiple federal agencies. Managed projects in all aspects of NEPA for multiple clients and communicated directly with clients on status of projects. Consulted directly with State Historic Preservation Offices, Federal and State agencies, and local organizations on behalf of clients. Trained staff with regards to historic preservation issues. Develop the company's policies and procedures with regards to cultural resources and Section 106.

Director, Cultural Resources, CBRE (2015-2020) – Completed over 3,000 Section 106 consultations for FCC projects in addition to Section 106 for other agencies and state equivalent reviews. Developed scopes of work for Section 106 consultation projects for Federal and State agencies. Developed expert knowledge of the National Historic Preservation Act and the FCC's Programmatic Agreement and Report and Orders. Advised clients on historic preservation issues. Developed mitigation strategies and/or alternatives in consultation with stakeholders. Authored Memorandums of Agreement for potential adverse effect projects in consultation with ACHP, SHPOs, THPOs, local preservation groups, and other stakeholders. Provided quality control determinations of effect for Section 106 consultation projects as well as determinations of the eligibility for the National Register of Historic Places. Provided expert testimony with regards to potential effects on historic resources.

Deputy State Historic Preservation Officer/Construction Grants Coordinator, Connecticut SHPO (2011-2015) – As Deputy State Historic Preservation Officer and the Construction Grant Coordinator for the State of Connecticut, provided technical assistance on hundreds of restoration and Section 106 projects and managed a portfolio of over \$5 million in planning and construction grants. Assisted property owners with project planning and design to ensure projects met the Secretary of the Interior's Standards for the Treatment of Historic Properties. Developed and reviewed hundreds of determinations of eligibility for properties for submitted for listing in the National Register of Historic Places. Hosted and attended numerous meetings and training sessions to improve the public's understanding of historic preservation policies and programs and attended annual National Conference of State Historic Preservation Officers (NCSHPO) meetings and developed relationships with many of the State Historic Preservation Officers.
