

Sunrise Wind Offshore Wind Farm

Fishery Landings & Revenues

Landings from Impacted Fishery Management Plans (FMPs)

NMFS defines “most impacted” as the FMPs deriving the most revenue from the area over the twelve year analysis period of 2008 to 2019, indicating the highest potential for impact to industry from a reduction in fishing area. The top 5 FMPs by revenue in Sunrise Wind were All Others, Monkfish, Sea Scallop, Skates and Summer Flounder, Scup, Black Sea Bass. Revenue values have been deflated to 2019 dollars. All numbers have been rounded to the nearest thousand. An additional figure on the “All Others” category follows.

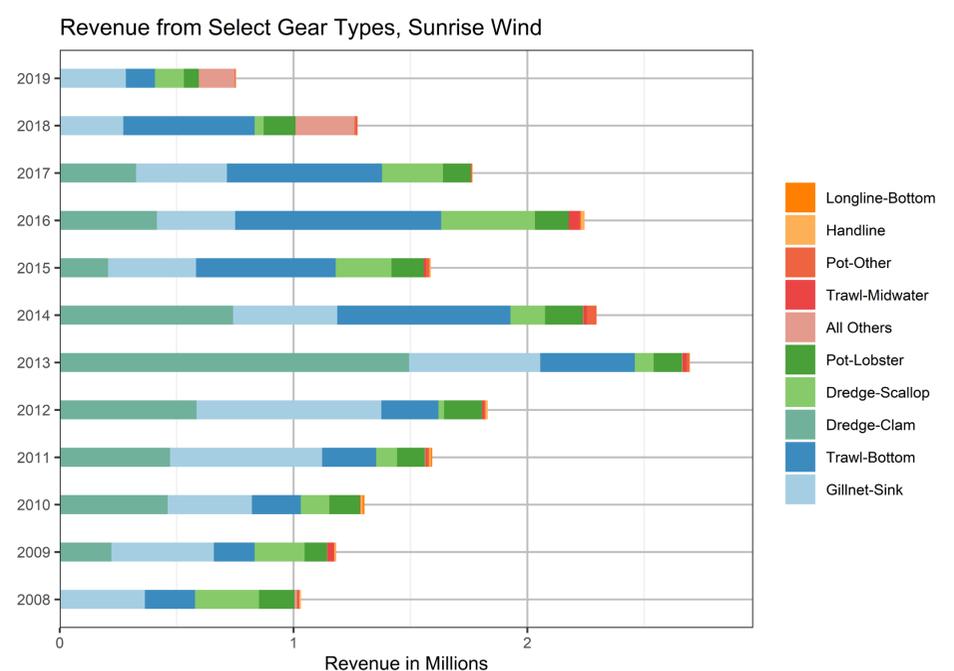

NMFS analyzed other impacted FMPs separately in order to better visualize the estimated landings and revenues. The other impacted FMPs are: American Lobster, Atlantic Herring, Bluefish, Golden And Blueline Tilefish, Highly Migratory Species, Jonah Crab, Mackerel, Squid, And Butterfish, No Federal Fmp, Northeast Multispecies, Small-Mesh Multispecies, Spiny Dogfish and Surfclam, Ocean Quahog. Revenue values have been deflated to 2019 dollars. All numbers have been rounded to the nearest thousand.

Revenue by Port

The ten most impacted (by revenue) ports are listed below. These ports are estimated to receive the most landings from fishing done within the Sunrise Wind area. The table below displays each port’s landings revenue breakdown. The table present the cumulative revenues from 2008-2019. New Bedford receives the highest value of landings of any port, with \$7.618 million from 2008-2019. All numbers have been rounded to the nearest thousand.

City	State	Twelve Year Revenue
New Bedford	MA	\$7,618,000
Point Judith	RI	\$5,339,000
Little Compton	RI	\$2,345,000
Newport	RI	\$1,413,000
All Others		\$724,000
Westport	MA	\$414,000
Tiverton	RI	\$393,000
Montauk	NY	\$359,000
Stonington	CT	\$192,000
Fairhaven	MA	\$137,000

Revenue by Select Gear

Revenue from Select Gear Types for the Sunrise Wind project area.
