

New York Bight Draft Programmatic Environmental Impact Statement

Tips to Provide Helpful Comments

Public input on the New York Bight lease areas assists BOEM in evaluating the potential impacts of offshore wind development in the six lease areas as part of the development of the draft Programmatic Environmental Impact Statement (PEIS). BOEM will analyze the comments received, conduct technical analyses, and prepare the draft PEIS for a period of 12-16 months after the public comment period closes.

BOEM welcomes comments on all facets of the PEIS, but encourages stakeholders, organizations, Federal agencies, and Tribal, State, and local governments to provide comments that follow the guidelines below. Comments that only support or oppose the program do not provide enough specificity or substance for BOEM to evaluate the potential impact. Additionally, comments submitted via form letters that provide similar information as other comments are less helpful to BOEM in developing an accurate draft PEIS.

Helpful comments

- Are fact based.
- Include links to data or research and are supported by methodologies and/or assumptions when applicable.
- Provide specifics regarding potential impacts to the ocean, coasts, plants, animals, and people.
- Provide specifics on how, where, and when the ocean is used.
- Accurately describe potential impacts to the affected region, affected interests, and localities.

Examples of helpful comments

- **Fact & Location Specific:** One nautical mile north from lease area OCS-A 1234, at 200-meter water depth, is a shipwreck that is considered a historic property. Please consider this in your review.
- **Data/Research & Impacts:** The New York Bight area is an important habitat for the North Atlantic right whale. Experience with this species suggests that offshore wind vessel activity and noise disturbance could negatively impact them. Research on this topic, including potential avoidance or mitigation measures, is available at [link].
- **Fact, Impacts & Location Specific:** I manage a commercial fishing company that operates in the New York Bight lease areas. These areas have been productive spots for fisheries for many years. The farm is [number] miles from the [lease area number] of the New York Bight lease area. We are very concerned about offshore wind activity so close to our waters and possible effects on our fishing operations.

Attend a Public Meeting

Public meetings will be scheduled in July and August 2022 to provide information on the environmental review process, facilitate Q&A with subject matter experts, and collect public comment.

To register for these virtual meetings, please visit [BOEM.gov/renewable-energy/state-activities/new-york-bight](https://www.boem.gov/renewable-energy/state-activities/new-york-bight).
