- Sheet 2 – Context Photography
- Sheet 3 – Existing Conditions Panorama View, Morning (8:21 AM)
- Sheet 4 – Panorama View With Simulation, Morning (8:21 AM)
- Sheet 5 – Single Frame (50-mm Lens) Simulation, Mid-Day (12:45 PM)
- Sheet 6 – Single Frame (50-mm Lens) Simulation, Late Afternoon (4:30 PM)
- Sheet 7 – Nighttime Panorama View (March 22nd, 2016)

Panorama Viewing Instructions:

To approximate the field of view represented by a 14.5" panorama it should be printed on an 11" x 17" sheet of paper and viewed from 7 inches away¹. If viewed in a digital format (i.e. on screen) then similar size and distance should be used.

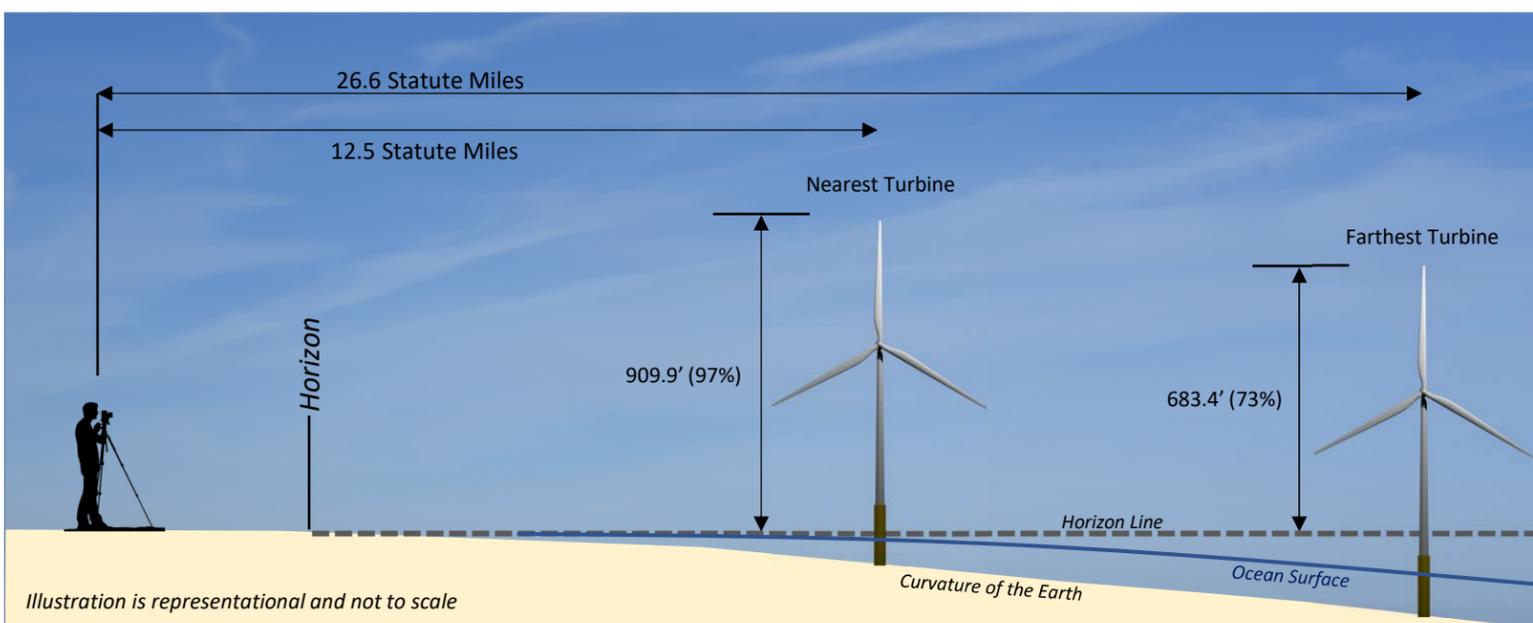

Single Frame Viewing Instructions:

The viewing distance for a 14.5" single frame simulation captured with a 50-mm lens is 21 inches.

In all cases care must be taken to not over or underrepresent the visual contrasts². Typical binocular human field of view is assumed to be 124-degrees horizontal and 55-degrees vertical.

Ocean City Boardwalk

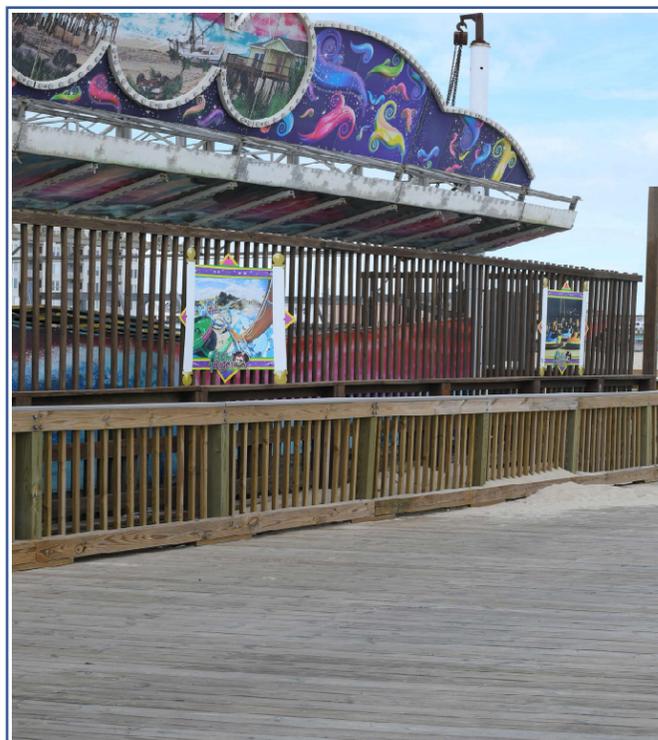

Tourism and summertime recreational area with an amusement park with stands and rides along the boardwalk to the west (landward) of the beach. A long pier extends approximately 550 feet into the surf.

See Sheet 1 for citations.

An Aircraft Detection Lighting System (ADLS) Efficacy Report, included with the Visual Impact Assessment, indicated that use of an ADLS would reduce aviation obstruction lighting by 99% and that lights of the Maryland Offshore Wind Project would be illuminated less than 6 hours each year. Multiple projects employing ADLS would be illuminated a small fraction of 1% of the year, if at all.

Nighttime conditions are simulated from daytime photography. The height of the nighttime panorama has been reduced slightly to accommodate the project extents panel above.
