

BOEM ENVIRONMENTAL STUDIES PROGRAM: ONGOING STUDIES

Region: Alaska

Planning Area(s): Chukchi Sea

Title: Current and Historic Distribution and Ecology of Demersal Fishes in the Chukchi Sea Lease Area (AK-93-48-67)

BOEM Information Need(s) to be Addressed: This study will provide information on the past and present fish presence, distribution, and abundance that is needed to evaluate and mitigate the effects of offshore development. The BOEM analysts and decision makers will use the information from this study in NEPA analysis and documentation for lease sales, EPs and DPPs, and in post-sale and post-exploration decision making, mitigation, and monitoring in the Chukchi Sea. This study addresses aspects of USGS Recommendation 3.05.

Total Cost: \$343,000 plus Joint Funding **Period of Performance:** FY 2007-2012

Conducting Organization: CMI, UAF

Principal Investigator: Dr. Brenda Norcross

BOEM Contact: [Catherine Coon](#)

Description:

Background: After a two-decade hiatus, Offshore Oil and Gas leasing is to commence in the Chukchi Sea. Very little historic fisheries information has been collected in the lease sale area. Like the Bering Sea, the Chukchi Sea has historically been a benthic dominated ecosystem. With arctic climate change, however, the Bering Sea is now shifting from a shallow, ice-dominated system in which bottom-dwelling fishes prevail to one more dominated by pelagic fishes. Further examination of the Chukchi Sea may indicate similar changes.

At present, we can only speculate what may be occurring in the Chukchi Sea, as there is a paucity of information about fishes in this area. The Chukchi Sea is outside the range of the NOAA Alaska Fishery Science Center regular fish trawls surveys, thus information on fishes in the Chukchi is limited to a few historic surveys. Currently the niche of benthic consumers in the Arctic, including the Chukchi Sea, is filled by seabirds and marine mammals. However, with decreasing sea ice in the Chukchi Sea, demersal fishes moving northward from the eastern Bering Sea might usurp the place of birds and mammals as benthic consumers. Without current baseline data, effects of offshore development cannot be separated from recent changes due to other factors.

This project will assemble data into a searchable database and collect additional field data to meet BOEM needs.

Objectives: The overall project is to document the abundance and distribution of fishes in the Chukchi Sea. Specific objectives include:

- Collect fishes and document species presence, abundance, distribution, geographic range, species diversity, species assemblages, and habitat parameters.
- Assess physical and oceanographic feature (water mass) characteristics that define demersal fish habitat.
- Assess physical characteristics that define juvenile and adult fish communities and compare among collection periods and with historic collections.
- Correct the identification of historical archived fish specimens for accurate comparison with the proposed collections in the Chukchi Sea Planning Area.
- Synthesize historic distribution patterns of fish species in and near the Chukchi Sea Planning Area, and compare with 2007-2008 collections.
- Incorporate both historic and current scientific fish collection data from the northeast Chukchi Sea into electronic format suitable for incorporation into the BOEM database.
- Provide a basis for post-sale monitoring of fishes in the Chukchi Sea.

Methods: Two years of sampling during July 2007 and 2008 will provide new collections of fish specimens and habitat data in the northeastern Chukchi Sea aboard the *Oshoro-Maru*. Additionally, relevant historic collections of fish specimens will be evaluated for species correctness. These two sets of data (both current and historic) will be summarized by the habitat types occupied by species in the Chukchi Sea Planning Area. A relational data base will be provided to BOEM that will contain data on species presence and abundance from both past and present collections. This will expand the current BOEM fish database and be suitable for GIS.

Current Status: Awaiting final report

Final Report Due: June 2012
